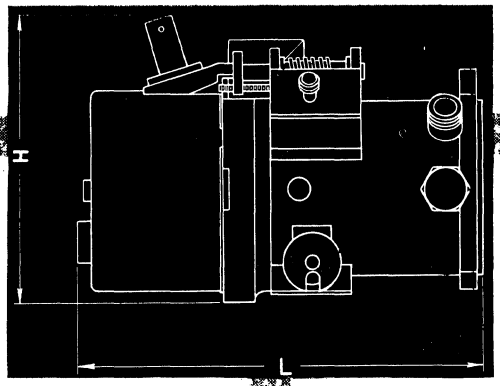
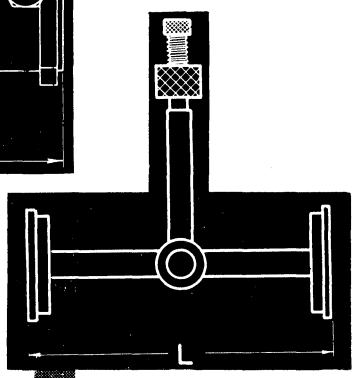
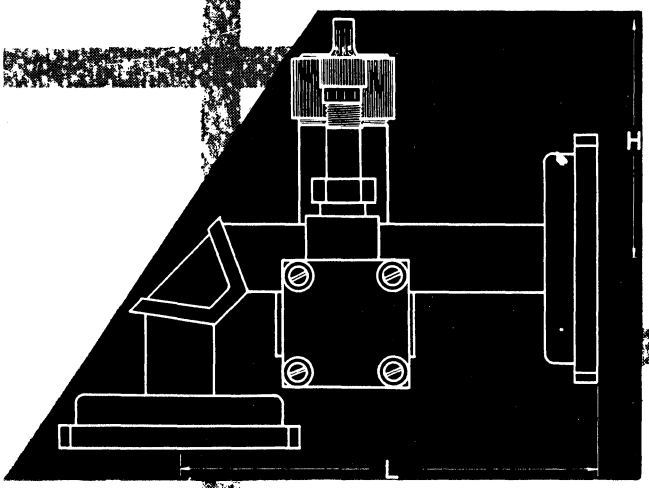
When precision microwave components are needed, engineers choose an ELSIN *component*



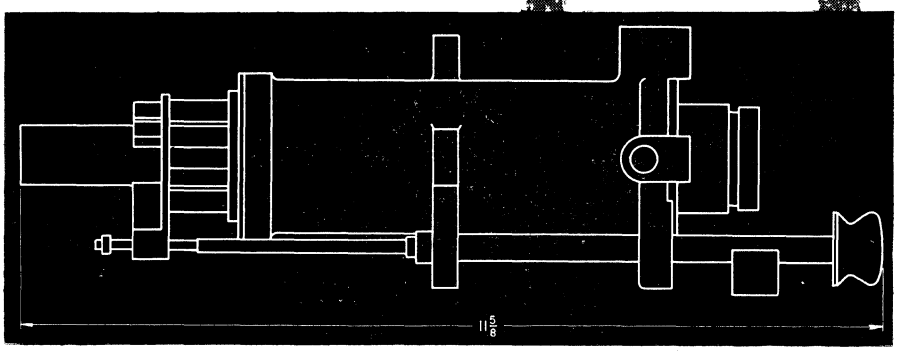
Utilizing a 2C39A triode, this versatile L band cavity can be used as a pulsed power amplifier, local oscillator or frequency meter. Elsin assures this unit's conformance to military specifications.



Used to tune out a mismatch or introduce one, this E/H Tuner does not reduce the power capability of the transmission line in which they are inserted.



With an operating frequency range of 8.2 —12.4 kmc and a 20 db attenuation, this cross guide coupler is ideal for measuring a microwave's system performance.



Having a sensitivity of better than—5dbm and a selectivity of 0.3%, this wavemeter operates at a frequency range of 1.7 —2.52 kmc.

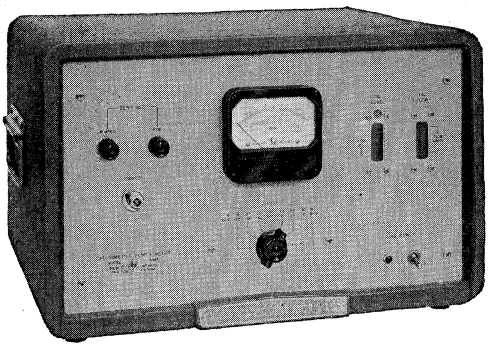
NEW! Microwave Power Measuring Equipment

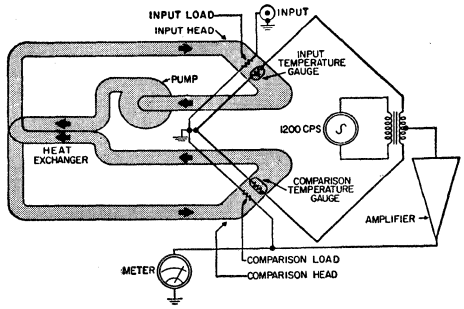


434A Calorimetric Power Meter

Just connect and read powers 10 mw to 10 watts! Covers dc to 12.4 KMC. No barretter or thermistor needed. No external terminations or plumbing. Measures CW or pulsed power. Two simple controls; no technical skill required.

New *-hp-* 434A Calorimetric Power Meter is, factually, the fastest, easiest way yet devised to measure powers accurately from 10 milliwatts to 10 watts, dc to 12.4 kilomegacycles.

With the 434A, measurement is literally as simple as connecting to the 50 ohm, type N front panel terminal and reading power directly. Thus the instrument is particularly suited for use by non-technical people.



Circuitry, *-hp-* 434A

Compact, self-contained

-hp- 434A fills the range between bolometer microwave power meters (such as the popular *-hp-* 430C, below) and conventional calorimeters for powers above 10 watts. But unlike previous cumbersome equipment suggested for its range, the new *-hp-* 434A is compact, moderate in cost, completely self-contained, and needs no detectors or external plumbing whatsoever.

Brief Specifications

Input Power Range: 7 ranges; full scale readings 0.01 to 10 watts
Frequency Range: dc to 12.4KMC
dc Input Impedance: 50 ohms ± 5 ohms at input jack

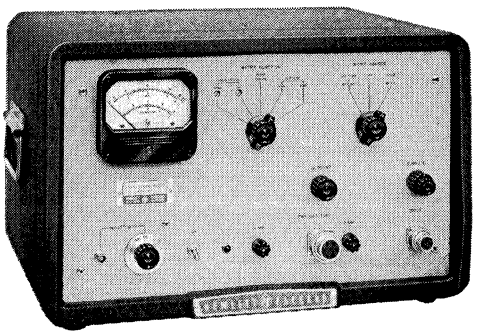
NEW! hp Noise Measuring Equipment



hp 340B/342A Noise Figure Meters

Receiver and component alignment jobs that once took skilled engineers a full hour are now done in 5 minutes by a semi-skilled worker. I.F. AMPLIFIERS *for* RADAR and GUIDED MISSILES

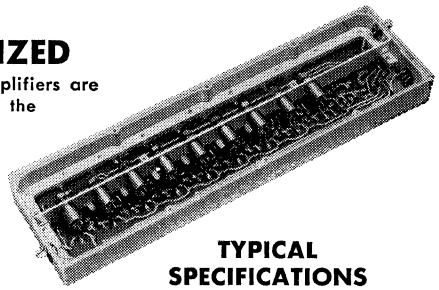
SERIES-80 TRANSISTORIZED



The LEL Series IF 80 amplifiers are transistorized versions of the IF 63 subminiature amplifiers and are intended for prototype work in new system designs. While normally designed for a 3 mc. bandwidth at a center frenquency of 30 mc., they can be supplied at other center frequencies and bandwidths on special order.

The IF 80B uses eight stages of grounded base circuitry with an emitter follower output stage.

Also available IF 81, a low noise Hybrid unit and IF 82 a ruggedized missile unit.

SERIES-64 MISSILE TYPE

The LEL Series IF64D amplifier has been designed for operation under conditions of severe vibration, and temperature. While similar in some respects to the IF 63 series, a special chassis design has been developed to withstand very high vibrational stress and to permit greater heat transfer.

Amplifiers embodying the features of the IF 64 series but with electrical and mechanical modifications to meet a specific end use can be supplied in pilot to production quantities and quotations will be submitted on request.

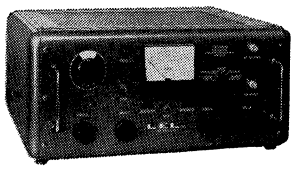
In requesting such quotation, please indicate quantity desired.

LOW NOISE MICROWAVE AMPLIFIER

MODEL TWT-10



The TWT units are self sufficient microwave amplifiers designed to incorporate RCA TWT Tubes. Front-panel adjustments for operating voltages and for solenoid current allow gain or noise figure to be optimized.

Thermal time delay is included allowing the equipment to preheat. The traveling-wave tube is protected from damage by a helix current overload relay, removing all dc electrode voltages. Front panel overload reset is provided.

SUBMINIATURE WIDEBAND SERIES

The LEL Series IF 65DS preamplifier and IF 66D main amplifier are complementary amplifiers suitable for use in a 0.1 microsecond 60 mc. radar system. They feature instantaneous recovery from high overload signals and a usable output from signals at noise level. The IF 67 A.F.C. unit is designed for control of a Klystron, and physically matches the IF 66D.

SERIES-65

Use of these amplifiers in a system will in many cases eliminate the necessity for IAGC circuitry, avoid keying transients and provide a much greater dynamic range than generally found in IF systems.

BROADBAND WAVEGUIDE SECTOR SCAN ROTARY JOINT

LIECO announces a series of Step Twist Rotary Joints for scanning a ± 90° sector. These sector scan joints are broadband, covering the entire usable waveguide frequency band (approximately 40%). The maximum VSWR is below 1.15. For narrower bandwidths the VSWR can be held well below 1.10. The sector scan joints are short, have input and output on the same axis and are capable of being pressurized. LIECO is producing these units in all standard waveguide sizes in the frequency range from 2.60 to 40.0 kmc. The joints can be supplied fabricated from either brass or aluminum.

PARAMI

is an electronic system for measuring the separation between a missile and target. A real time, digital record of miss-distance is produced at a remote ground station from which the closest approach of intercept can be read in 10 to 15 seconds.

Features...

Radial separation of missile and target to 4,990 feet recorded in 10-foot increments. 2-foot readout available.

Practical range of operations to 100 miles line of sight.

All weather operation, day or night.

Accuracy assured by inflight calibration.

Data permanently recorded in real time.

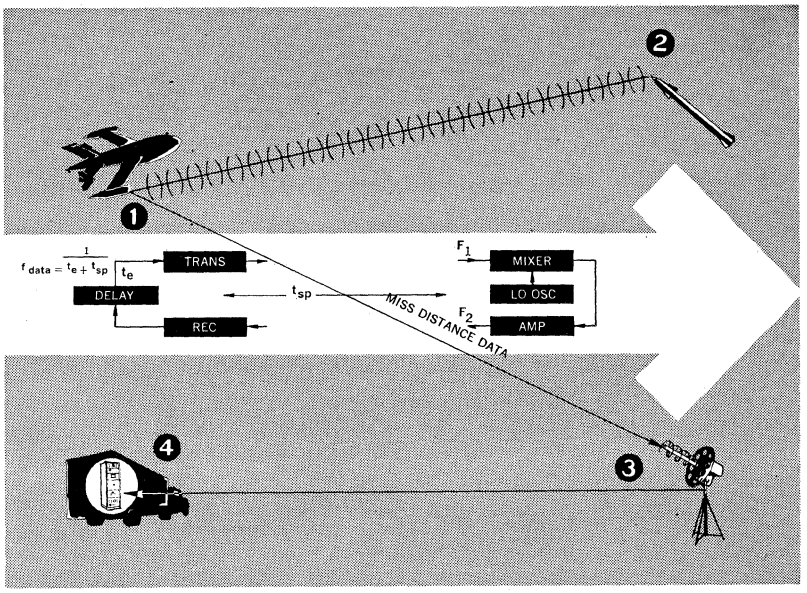
195 samples per second at closest approach. (780 samples per second available on order.)

Ripple firings recorded.

Activation of target devices at preset ranges including "Go No-Go" scoring.

Inherent reduction in multipath, glint, and scintillation errors.

Mobile installations practical for operations on uninstrumented ranges.

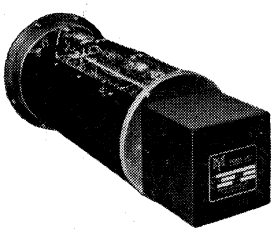


How It Works:

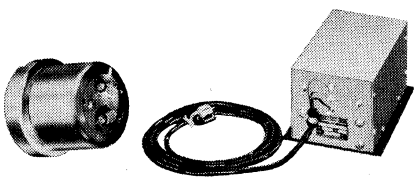
A pulse is transmitted from the target transponder. This signal is received and retransmitted by the missile transponder on a different frequency. When the signal has completed its journey between the two units, it is delayed 20 microseconds, reshaped and again transmitted, completing one ring-around.

Three delays make up the time of a ring-around; the electronic delays in each transponder, and the round trip radio delay.

The ground station contains a simple computer that subtracts the two periods of electronic delay and counts in tens of feet one-half of the round trip radio delay, or the distance we want.

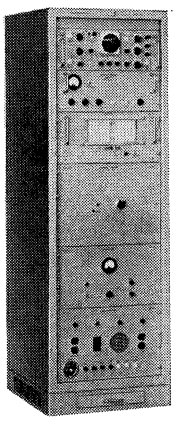


1. Target Transponder with Power Supply



2. For each missile type, a transponder is designed for easy installation without modifying the missile.

3. Receiving antenna



4. Ground Station

	Distance from Target	Overall System Accuracy
MISSILE TRANSPONDER	0-200′	10′
	0-3000′	10′
PROXIMITY SCORES (Adjustable)	0-100′	10′
	0-400′	10′
TARGET LOCATOR ASSEMBLY	1-100 mile range	2%
	Azimuth	5°
	To 70,000′ altitude	2%

UNIWAVE'S *Microsmooth* BENDS AND TWISTS IN WAVEGUIDES

Uniwave's unique "Microsmooth" forming process produces a slick, uniformly smooth interior in the bending and twisting of waveguides to any shape. Energy-absorbing hot spots, draw marks, creases, burrs and ripples are eliminated — providing for absolute, distortion-free wave travel. This process maintains close tolerances on inner dimensions while bends in any plane can be combined with offsets, twists and sharp radii. Uniwave's "Microsmooth" process is currently used in the production forming of waveguides for bands such as the C, X and K. Quotations are furnished to customer's blueprints for all sizes, shapes, lengths, materials and quantities.

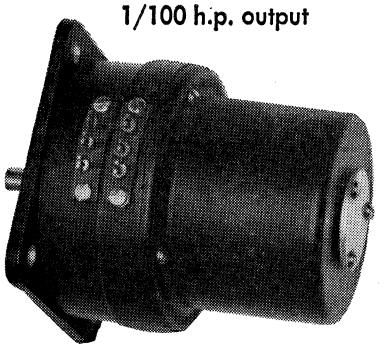
MODEL GS SYNCHRONOUS MOTOR

WITH INTEGRAL START MOTOR — CONSTANT ANGULAR ROTATION ± 0.1 DEGREES — NO LOAD TO FULL LOAD!

1/100 h.p. output



A phonic wheel type motor capable of operating from vacuum tube amplifiers on signal frequencies from 60 to 3600 cps. It was designed to provide the extremely accurate and invariable speed required for driving fork-synchronized facsimile equipment. Its unique characteristics will be found the answer to many problems involving the need for constant angular rotation or precise synchronization.

The Model GS Motor can be operated single phase in the plate circuit of a single-ended amplifier or as a two phase motor when driven by a push-pull amplifier. The latter is recommended since the two-phase connection runs quieter and provides more power with less heating. The motor current is about 75 milliamperes per phase. The power input may be as high as 20 watts.

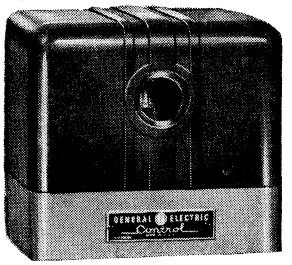
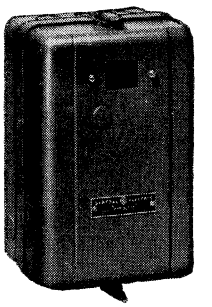
GENERAL ELECTRIC PHOTOELECTRIC RELAYS AND ACCESSORIES



CR7505-K100G3 Relay

The CR7505-K100G3 photoelectric relay and accessories provide a complete line of inexpensive, but thoroughly reliable, apparatus for general-purpose indoor applications which include counting, diverting, controlling, signaling, limiting, and protecting. Underwriters' Laboratories listed.

The CR7505-K100G3 includes phototube and thyratron, has a contact rating of 10 amp a-c, may be used to start f-hp motors directly, and can operate all motor starters up to and including NEMA Size 4.

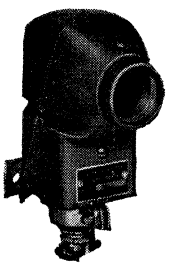


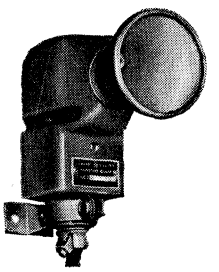
CR7505-K201, -K202 Relays

These photoelectric relays will perform the same type of functions as the -K100 with greater speed and sensitivity. These relays operate on either light increase or decrease, depending on connections. The relays will operate from light flashes on interruption of 1/15 second between impulses, with not less than 1/15 second between flashes. The d-c phototube circuit permits remote location of phototube with no loss in sensitivity.

Accessories for Use with -K100G3

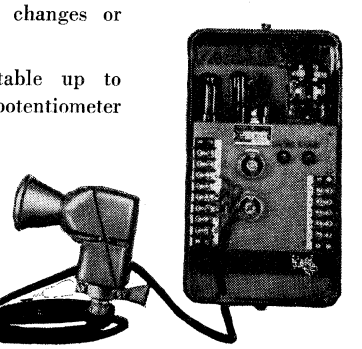
Light-source transformer, 933B195, rated 115/230 volts, 50/60 cycles, primary; 4.8/5.2 volts secondary; mounted in 4-in. by 4-in. by 2⅛-in. enclosure. Lens-barrel assembly CR7505-B207G1, 3 in. in diameter, for mounting directly on relay; two light sources, -C201G1 with 1½-in. lens and -C203G1 with 3-in. lens; two phototube holders with six feet of special phototube cable and a plug for connecting to tube socket in the relay, -P211G1 with 1½-in. lens, and the -P212G1 with 3-in. lens. With 1½-in. lens, maximum operating distance is 12 ft; with 3-in. lens, maximum operating distance is 30 ft. Sensitivity of -K100G3 may be increased five times by use of -B207G1 lens-barrel assembly.





CR7505-N210, -N211, -N212 Relays

These three relays are similar in circuit design and are especially adapted for photoelectric applications where a device must respond to rapid light changes or high operating rates.



A time-delay feature, adjustable up to ½ second by means of a potentiometer dial, is provided to delay the dropout of the magnetic delay in cases where the relay would be energized for such a short time that the period would not be sufficient to perform the external control operation desired.

The relays will respond to light changes as small as ½ foot-candle, providing there is sufficient light on the phototube.

Separate phototube holders are required for these units.

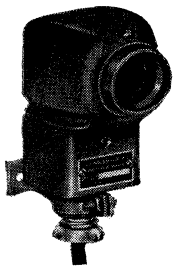
GENERAL ELECTRIC ELECTRONIC TIMERS AND DEVICES

Photoelectric Accessories for Use with -K201 and -N210 Series

The light sources are of die-cast aluminum construction. The -C201G1 light source has a 1½-in. lens, focusable from 2 feet to infinity. The -C202G1 has a double lens for short focus, for a concentrated spot approximately ¼ in. in diameter at a distance of 2½ - 4 in. in front of the lens. The -C203G1 light source has a 3-in. lens, with high-intensity beam for long-distance operation. The -C201G2, -C202G2, and -C203G2 are identical in operation with the G1 group, but have rubber gaskets between the front and back covers which makes them weather-resistant and dust-tight in accordance with NEMA Standards.

4.8 volts is required for all the above light sources and the following transformers are recommended:

Light-source transformer, Cat. No. 933B195, is rated 115/230 volts, 50/60 cycles, primary; 4.8/5.2 volts secondary, and is mounted in 4-in. by 4-in. by 2⅛-in. enclosure. Model No. 9T53Y8058 is rated the same as Cat. No. 933B195, except it will operate on 25/50/60 cycles and is of weather-resistant construction. Approximate dimensions, 5⅝ in. by 3⅝ in. by 3⅝ in.

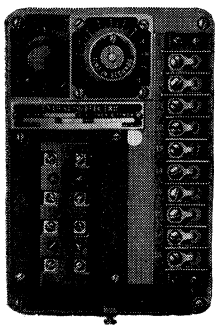


The -C208 light source is explosion-proof and can be made watertight by applying a rubber gasket which is furnished. It has a 3-in. lens and a self-contained step-down transformer for 115/230-volt operation.

The *phototube holders* are similar in construction to the light sources. The -P202G2 has a 1½-in. lens and the -P203G2 has a 3-in. lens. Both come with a 9-ft phototube cable with spade terminals.

CR7504-A142 Electronic Timer

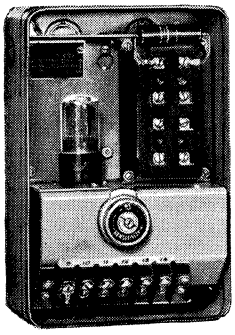
The -A142 timer is for timing applications of short time duration (-A142G1, 0.06 to 1.2 sec; -A142G2, 0.6 to 12 sec; and -A142G3, 6 to 120 sec) where long life, low maintenance, and high repetitive accuracy is required.



The -A142 has double-pole, double-throw contacts; can be used to start f-hp motors directly. Time-range dials read directly in seconds.

Two different types of operation available; immediate-start for timing operations or delayed-start for providing a time delay. Power supply, 115/230 volts, 50/60 cycles; power consumption, 15 watts.

CR7511-A126 Resistance-sensitive Relay



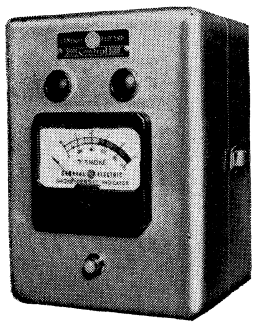
This relay is used to obtain a reliable contact from the touch of two conductors through which only small currents flow. It will operate motors, lights, contactors, and solenoids whenever there is sufficient change in the resistance of a circuit, including liquid-level-control applications. In this way, large amounts of power can be controlled from a low-current high-resistance input.

It has 10-amp a-c contact rating, two single-pole, double-throw, contacts for controlling two independent circuits. Enclosure is weather-resistant and dust-tight.

Voltage-sensitive Relay, CR7511-B113G2

The voltage-sensitive relay (similar to illustration above) is an extremely useful device whenever a change in voltage is to be detected. It may be used in such applications as elevator-motor overspeed detection, and turning on meters when a voltage variation takes place. Input impedance permits low burden on the system.

CR7505-R201G1 Smoke-density Indicator



This control and associated equipment can be used to indicate smoke density, gas density, or the density of any fluid where density is directly related to the light transmission through the fluid. It can be used to warm furnace operators of excessive smoke conditions, to turn on blowers or relevant equipment at any smoke-density level, and when used with a suitable recorder, a continuous permanent record of smoke density is always available.

The indicator has a semi-dust-tight enclosure (NEMA Type 1A) and an industrial-type relay, 45 amp make-break and 10 amp carry, at 115 or 230 volts, a-c. Simple calibration adjustments are made with four locking-type knobs on the panel, while indicating lights and a smoke-density instrument are on the front cover of a panel.

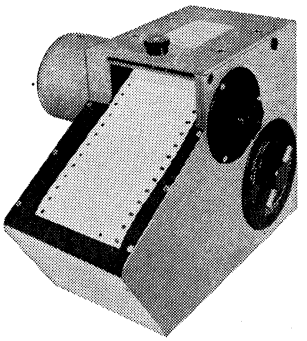
a foremost designer and manufacturer of specialized photoelectric and other electronic equipment.

We invite your inquiries in the fields of pure research and development, as well as particular product manufacture and development.

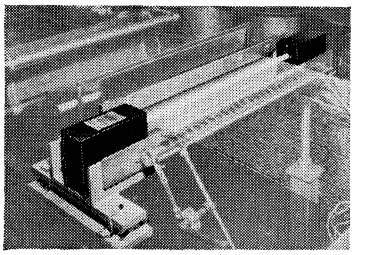
STATISTICAL RECORDER



Automatically determines down-time and/or running-time of up to 68 machines and other equipment (simultaneously). Sequence and duration of events is recorded by a dry system. A voltage, applied to marking fingers, records information on paper, will keep for an indefinite period of time. A single 100 foot roll of paper lasts approximately 3 weeks, depending on speed desired. Light brushing of the fingers daily is the only maintenance required.

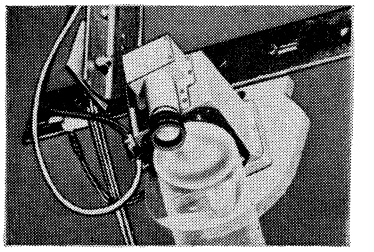
PHOTOELECTRIC DEVICES

Designed to detect a .01% change in light, or a change of 2.6 x 10^{-12} lumens . . . can detect deviations from the norm of solids, liquids and visible gases. Currently in widespread use in Textile industry.



LINDLY AUTOMATIC YARN INSPECTOR

Extremely sensitive optical-electronic device for detecting inconsistencies in yarn diameter. An electronically constant source of light passes through a lens and aperture arrangement, rendering the light parallel, and screening out the unused portion. The light, falling on a double apertured optical system, is spread to cover the photosensitive portion of the phototube. A minute change in light intensity produces an electrical pulse, which is amplified and used to operate a relay to open or close a circuit.



LINDLY PHOTO-SCANNER

Consists of a scanning head and an electronic control unit. Head contains light source, photoelectric tube, precision optical system, and an oscillating mechanism. Light, reflected from scanned surface, passes through optical system to photoelectric tube. Deviations from normal reflected light are detected, amplified, and used to actuate system according to desired purpose. Electronic circuit is designed to overlook extra large deviations, so that breaking light beam with hands will not actuate system. To prevent detection from spurious effects, Scanner must pass a deviation from norm twice before system is actuated.

CHICAGO MINIATURE LAMPS

(Standard or Special Design)

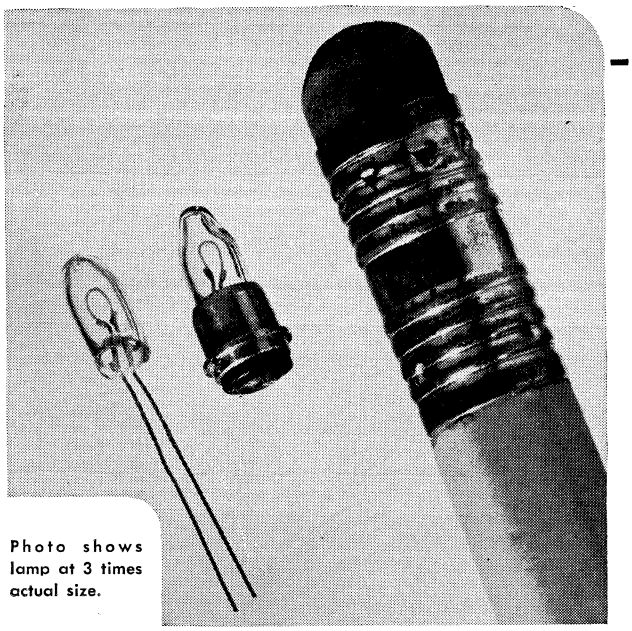

Photo shows lamp at 3 times actual size.

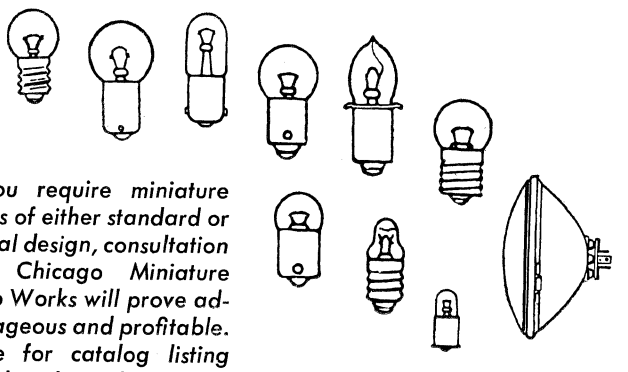
Typical especially designed lamp produced by Chicago Miniature Lamp Works

This illustration shows two models, one with flanged base and the other with straight wire leads, of a special lamp engineered and being produced by Chicago Miniature Lamp Works for use on new jet transport planes. It is the smallest commercially designed, long life lamp ever built, with a phenomenal life expectancy in excess of 7½ years of continuous use.

This is typical of many special lamp problems for which Chicago Miniature Lamp Works has provided the solution in the form of a specially engineered lamp of unusual design or characteristics.



If you require miniature lamps of either standard or special design, consultation with Chicago Miniature Lamp Works will prove advantageous and profitable. Write for catalog listing complete line of standard lamps.

for

- **AIRCRAFT**
- **INDICATORS, RADIOS, COIN MACHINES**
- **APPLIANCES, INDUSTRIAL EQUIPMENT**
- **6-8 VOLT, 12-16 VOLT AUTOMOTIVE and MOTOR COACH LAMPS**
- **FLASHLIGHTS and LANTERN LAMPS**

In addition to a complete line of standard lamps always maintained in adequate stocks to satisfy normal demands, Chicago Miniature Lamp Works is particularly well equipped from a standpoint of engineering personnel and equipment to design and produce lamps of a special nature both as to shape or style and function. The lamp illustrated, with an approximate life of 7½ years of continuous use, can be contrasted to another recently designed that required a life of only 15 seconds. Many such projects, bordering on the unusual or "impossible", have been brought to a successful conclusion by Chicago Miniature Lamp Works' engineering staff.

In addition such special features, as those listed below, can be added to various standard listed lamps to make them more suitable for certain special requirements.

The LIGHT SOURCE: Tiny G. E. Neon Glow Lamps NE-2D or NE-2J

These lamps have formed bulbs and midget flanged bases; designated as *NE-2D* for the regular lamp, and as *NE-2J* for the high brightness type which has higher voltage characteristic requiring 110 volts A.C. or 160 volts D.C. for reliable performance. A resistor (or other ballast) must be used. Since the current is never more than 3 m.a., the resistor may be the 1/3 watt type. Recommended values are as follows:

For NE-2D at 105-125 volts A.C. or D.C.

Bright light	Medium life	Long life
56,000 ohms	100,000 ohms	220,000 ohms

For NE-2J (High Brightness) at 105-125 V. (A.C. only)

Bright light	Medium life	Long life
18,000 ohms	33,000 ohms	82,000 ohms

For FRONT of Panel Insertion: Requires single 17/32" clearance hole.

Sub-Miniature Indicator Lights for T-1¾ Bulbs

MIDGET FLANGE BASE INCANDESCENT

TWO TERMINALS — FULLY INSULATED — Conform to all applicable military specifications

FEATURES: All of these indicator lights are designed to employ the tiny midget flange base incandescent lamps in a range of low voltages from 1.3 to 28. Standard lamp types with their ratings are shown below. Replacement of lamp is from the front of panel in all cases . . . *OMNI-DIRECTIONAL* visibility is afforded by the stovepipe cap of high heat plastic which may be fitted to either front mounting or rear mounting assemblies . . . Seven signal colors are available . . .

RUGGED CONSTRUCTION, PHENOLIC INSULATION — Lamp, socket, and all connections are completely insulated from the bushing and panel to which it is attached. The use of phenolic material of military specification grade assures permanent isolation from ground . . . These assemblies are solidly made of brass and will withstand usual vibration and corrosion resistance tests . . . Two terminals are perforated for wire and tinned for easy soldering.

PLASTIC DOME — Omnidirectional lens. This unique stovepipe lens is moulded of high heat plastic. It radiates light in all directions. Its heavy wall is reinforced by its threaded brass insert. This fitting receives the lamp and screws into the internal thread of the bushing. The bulb enters well into the plastic dome which is readily removed from the front of the panel. *Standard Finish:* Black nickel . . . *Options:* White nickel or polished chrome . . . *Order Complete with Lamp.* Specify lamp number.

SUB-MINIATURE LIGHTS for Translucent Panel EDGE LIGHTING

Meet all requirements of Military Specification MIL-L-7806-3

New design eliminates blind spots — produces shadow-less lighting

This series is designed for MIL-P-7788 Panels (plastic plate)
Conform to Military Drawing — MS25010 — 1A to 8A. Complete with T-1-¾ incandescent lamp No. 327 (MS25237-327).

FEATURES: This series provides a complete line of assemblies for every requirement of Plastic Plate lighting and indication. (1) The basic lighting units for transilluminating the standard 3/16" plastic panels are those assigned *Military Specification Numbers* 25010-1A, 2A, 3A, and 4A. They are designed to emit light through a red filter radially into the plastic plate . . . (2) Panel lighting plus indication assemblies with light emission instead of opaque tops is accomplished when the edge lighting assemblies are modified by use of caps of the same light transmitting character as the filter . . . (3) Inset lens in opaque top for dual purpose edge lighting and indication provides a wide angle of visibility . . . (4) All-metal indicator lights with convex lens—dimming and non-dimming available. When it is necessary to insulate the mounting bushing of these lights from the metal panel, washers may be provided . . . (5) Terminal may be single soldering or single binding screw type . . . (6) All assemblies may be had with either black or gray tops.

LIGHT SOURCE:

All of these sub-miniature pilot lights use the T-1-¾ bulbs.

See Page **859** for range of voltages.

ASSEMBLIES with BUILT-IN RESISTORS For the T-3¼ NEON GLOW LAMP

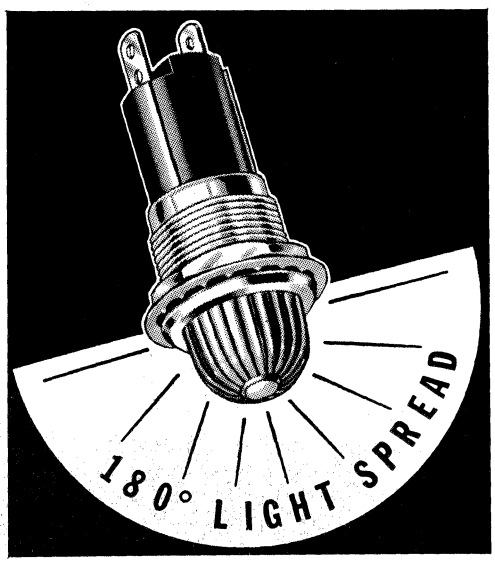
(U. S. Patent No. 2,421,321)

FOR VOLTAGES UP TO 250

FEATURES:

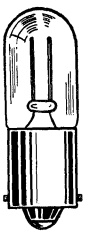
Small space required; some units mount in 9/16" clearance hole . . . May be directly connected to commercial circuits —up to 250 V . . . Give dependable indication under severely unfavorable conditions . . . Add safety and attraction to any electrical product . . . Meet Military (MIL Spec) and Civilian (UL and CSA) requirements . . . Low in cost—one cost figure for unit complete with resistor and bulb . . . Complete range of choice in every detail: Resistance value, Metal finish, Terminal type, Insulation to MIL Spec; Lens shape, diameter, color, surface; Resistor completely enclosed—sealed in metal—patented.

The diagram below shows a sectional view of the back portion of a light of this series. The resistor itself is completely insulated in moulded bakelite (a patented Dialco feature).



ADVANTAGES OF THE NEON GLOW LAMP:

Extremely rugged — no filament — resists severe vibration . . . Long, long life—rated over 25,000 hours — see table below . . . No sudden failure —predictable replacement after gradual darkening . . . gives 2 distinguishable colors with red and yellow lenses.



NE-51
NE-51H

Operates equally well in high or low temperatures . . . Very low power required — less than 1 watt on 250 volt circuit . . . Low in operating temperature — rugged plastic caps may be used.

REQUIRES BALLAST RESISTOR — but the necessary resistor is "BUILT-IN" — an integral part of this series of DIALCO Pilot Lights.

PROPER CHOICE OF LAMP AND BUILT-IN RESISTOR VALUES: The NE-51 glow lamp types are shown with resistor tables for each. The lamps are the *standard NE-51* and the *new NE-51H*. The *new high brightness lamp* may be operated at about three times the level of current that may be applied to the standard lamp and it will produce more than six times as much light.

WIDE CHOICE OF LENS CAPS

MULTI-VUE or CLEAR CAPS: In addition to the advantages given by the built-in resistor, these assemblies offer another feature that is especially important. The *"Multi-vue"* cap shown at left gives a high degree of visibility by directing an increased amount of light toward the eye when the indicator is viewed from any angle. When it is desirable to view the electrodes directly, the clear caps shown at botton of facing page are effective. For concentrating the light into a beam the metal lens holders can be equipped with convex lenses.

These assemblies may be equipped with *Screw Terminals, Soldering Terminals,* or *Quick Connect Terminals.* Assemblies have a *fixed flange* for mounting from *FRONT* of panel and provided with internal-tooth lockwasher and hexagon mounting nut. For mounting from *BACK* of panel, units are supplied with movable flange nut or ring. Outside diameter is 15/16" in both cases . . .

Units with Screw-in Caps or Screw-on Caps may be made *watertight* on face of panel Units shown at left and upper right have *Screw-in Caps.* The 2nd unit at the right has a *Screw-on Cap* . . . These pilot lights conform to applicable Mil. Specs.

Standard Finish: Polished chrome for mounting bushing and lens holder.

Optional Finishes: White nickel, black nickel, or satin chrome.

Standard Finish: Black nickel for mounting bushing and lens holder.

Optional Finishes: White nickel for mounting bushing. White nickel, satin chrome, or polished chrome for lens holder.

LENS COLOR: The *final figure* in the above numbers indicates that the lens has RED color. When color other than red is desired, change this digit to a figure from the listing below. Note: White lenses are translucent and are always furnished unfrosted. (For example: 37408-335).

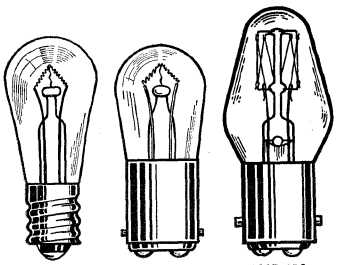
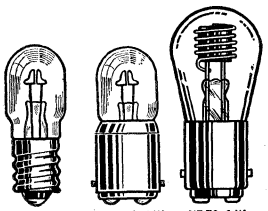
Three Lens Types: The permanently oil-tight lens cap can be had with a choice of 3 permanent-color glass Lenses: Omnidirectional Torpedo Faceted, Dome, or Flat Lens. The *flat lens* can be used with *discs* inserted behind the lens to deliver specific messages. This is a significant safety feature in motor controlled equipment. Seven lens colors are available. For complete specifications, refer to Form L-200A.



3 types of Incandescent Lamps may be used: Especially recommended is the 10C7/1DC lamp which is designed to WITHSTAND SEVERE VIBRATION and SHOCK. (Lamps shown approx. 2/3 actual size).

The complete Dialco line of Oil-Tight Indicator Lights includes units for mounting in 11/16", 13/16", 1", 1-3/16", 1-1/2", and 1-5/8" mounting clearance holes. Lamps accommodated include incandescent and neon lamps of the screw base and bayonet base types.

(Lamps shown approx. 55% actual size)



These 3 types of Neon Lamps may be used. NE-45 has candelabra screw base; NE-48 and NE-79 have double contact bayonet bases.

With Built-in Resistor for Neon Glow Lamps

U.S. Patent No. 2,421,321

Mount in 1" Clearance Hole: Units for use with the NE-48 and NE-79 Neon Lamp have the resistors *"built-in"* as an integral part of the unit for use on voltages up to 250V. The resistance value is selected to obtain the desired performance on supply voltage with the proper balance between lamp life and brightness. The best choice will be recommended for any set of conditions . . . Assemblies using the NE-45 Candelabra Screw Base Lamp have the required resistor built into the base of the lamp.

For Mounting in 11/16" Clearance Hole

Units for use with Neon Glow Lamps NE-51, or NE-51H *(high brightness)*, have *"built-in"* resistors, an exclusive Dialco feature. Similar units are usable with low voltage incandescent lamps. Stovepipe lenses are recommended. They may be *fluted, frosted back* or *unfrosted*. White lenses are translucent and are always furnished unfrosted.

For High Brightness, add "H" to the Catalog No. . . . Ex: 125-1308H-1191.

7 lens colors are available. Binding screw or soldering terminals may be specified. For complete details, refer to Form L-200A.

G-6 D.C. Bay. (32 V. max.) | S-6 D.C. Bay. | S-6 Cand. Screw

For Mounting in 1″ Clearance Hole

FEATURES: These Pilot Lights are preferred where it is necessary for the operator to regulate the intensity of light in accordance with environmental conditions. Two general types are available: assemblies with Mechanical Dimmers or with Polaroid Dimmers. The *MECHANICAL DIMMER* operation is described below the illustration at the right. In *POLAROID DIMMERS,* two polaroid discs are superimposed. Rotation of one gives a smooth change in intensity from maximum light to *very faint light* (not complete blackout) at minimum setting.

All assemblies come with Screw-on Dimmer Caps and Convex Lenses, and in a choice of 7 Lens Colors. Units are available with Screw Terminals, Soldering Terminals, or Quick Connect Terminals which will mate with standard solderless female connectors.

Optional features include: Split Lockwasher may be substituted for internal-tooth type . . . Octagon flange ring may be used instead of knurled ring which is shown . . . *Watertight Construction* is available only on Mechanical Dimmers.

Finish: Black nickel is standard for bushing and lens cap . . . These pilot lights conform to all applicable Mil. Specs.

OPEN | PARTLY CLOSED | SEMI-BLACKOUT | COMPLETE BLACKOUT

Mechanical Dimmers: Rotatable shutters decrease the size of 3 triangular openings from maximum light to complete blackout. In *"complete blackout"* no light is emitted. However, as a safety factor, the shutters can be provided with a small permanent central opening which permits a spot of light to reach the lens. This type is designated as *"semi-blackout."* It prevents missing a danger signal when the shutters are inadvertently closed.

FEATURES: This series also offers both Mechanical Dimmers and Polaroid Dimmers. There is a choice of 4 Cap types with Convex Lenses; 7 Lens Colors. Units with *ROUND FLANGE* have the lamp socket completely insulated in moulded phenolic of military specification grade (see prototype No. 83SB1310-111). Units with *OCTAGON FLANGE* have the lamp socket encased in laminated phenolic tubing of military specification grade (see prototype No. 932210-111). Many units are specifically designed to be *WATERTIGHT* on the face of the panel . . . *Finish:* Black nickel is standard for bushing and lens cap . . . FEATURES: The VM Series offers the following basic advantages: The built-in Press-to-Test feature enables the operator to (1) CHECK THE LAMP—instantly—without removal from the assembly . . . (2) Checks circuit or circuit breaker (see diagram at right) . . . Other important applications: DIALCO PRESS-TO-TEST Indicator Lights are useful for making a quick PRE-TEST of lamps prior to indicator operation and for quick bulb test when an anticipated signal fails to appear.

There is a complete series of Press-to-Test units for each of the following 6 types of lamps: T-1-3/4, T-3-1/4, and S-6 incandescent lamps; also NE-2D, NE-51, and NE-45 Neon Glow Lamps . . . *Precision Built* — Made of aluminum, these assemblies are lightweight, corrosion resistant, and attractive in appearance. Lamps are easily replaceable from front of panel.

Watertight Construction — Assemblies in Sub-Miniature and Miniature groups can be made impervious to water, dust, etc., on face of panel by means of high pressure seals. Such seals are supplied separately.

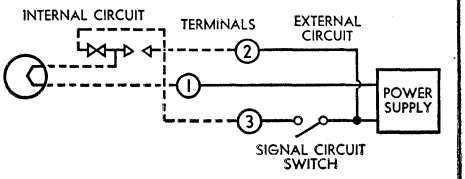
CIRCUIT OF *"PRESS-TO-TEST"* ASSEMBLIES



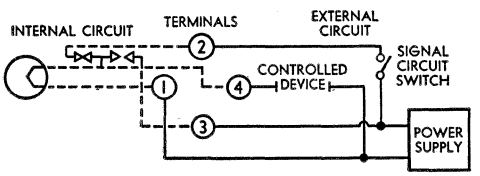
Pressure on the lens holder opens normal contact to #2 and makes contact to #3, completing test circuit. #1 is common to lamp.

3 Sizes of Assemblies Available:

SUB-MINIATURES—for mounting from *back* of panel in 15/32" clearance hole; also for mounting from *front* of panel in 17/32" clearance hole . . . *MINIATURES*—for mounting in 5/8" clearance hole . . . *LARGE*—for mounting in 1" hole.

Patented SHUTTER-DIMMING action—Another vital optional feature: Available on most Press-to-Test Indicator Lights. By turning the knurled cap, the operator can regulate the brilliancy of the light from the indicator assembly to suit his requirements under varying light conditions. "Complete Blackout" as well as "Semi-Blackout" can be supplied.

CIRCUIT OF *"PRESS-TO-SWITCH"* ASSEMBLIES



Terminal #1 may be common to almost any combination of #2, 3, or 4. This affords wide latitude in circuit design.

4 TERMINAL PRESS-TO-SWITCH AIDS IN CHECKING AND CONTROLLING COMPLEX EQUIPMENT

Especially advantageous for remote control applications to machinery, etc.

Efficient observation and control of equipment such as aircraft, electronic devices, machinery, etc., depends upon signals flashed from indicator lights. That is why PRESS-TO-TEST is so important. It eliminates doubt—gives an instantaneous report as to the condition of the lamp, circuit, and power supply. The PRESS-TO-SWITCH function, an optional feature, permits closing the circuit to any remote device.

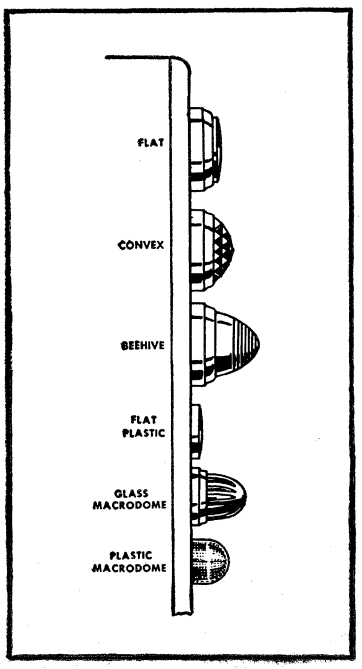
LAMP SELECTION FOR INDICATOR LIGHTS: Generally, the Lampholder is designed to accommodate maximum current and voltage for any lamp which will fit within the unit. Thus, physical dimensions, rather than electrical characteristics, should govern selection.

BULB SIZES: Lamps vary according to base, filament, and glass bulb combinations — see DRAKE catalog, lamp manufacturer catalogs.

LAMP REPLACEMENT: With horizontal mounting units, lamps are replaceable from front of panel only, unless otherwise specified; with vertical mounting units, from rear of panel only.

FINISHES OF METAL PARTS: All metal parts of DRAKE units are protected by plating (usually cadmium) to prevent corrosion.



BASIC SPECIFICATIONS FOR DRAKE LENSES (JEWELS)

LENS TYPES: Varieties of lens shape, and relative protrusion from panels of different styles, are illustrated at left, approximately one-half actual size.

•

LENS FINISHES: Most units are supplied with faceted (FAC) or Smooth, Frosted On Back (SFB) finishes. Special finishes are Smooth, Plain, no frosting (SP); Frosted Face and Back (SFA); Macrodomes fluted inside (F) — Fluted is standard for neon units.

•

LENS COLORS: Colors generally available are: Colorless, Amber, Blue, Green, Red, White, Yellow.

METAL FINISHES: On Indicator Light and Lens Assemblies, exposed parts are nickel or cadmium plated; except on DeLuxe style units, which are polished chrome plated. Other finishes such as Black Nickel, etc., may be had on special order.

•

PRINTED DISCS may be obtained with any wording which fits within the allowable space. Discs are now made from non-oxidizing, heat-resistant materials.

Manufacturers . . . for RESEARCH and DEVELOPMENT of GUIDANCE and INSTRUMENTATION

The INVERTRON'S exceptional stability makes it the favorite of the greatest names in space age hardware for AC power of types not obtainable from regular 60-cycle lines. Since it functions entirely electronically the Invertron eliminates the noise, mechanical difficulties and lack of flexibility inherent in rotating equipment. In addition to a wide range of standard models, the INVERTRON is available in custom configurations at only slightly above production line prices.

60 and 400 Cycle DEVR

THE A-C REGULATOR THAT ELIMINATES DISTORTION

- Furnishes 1.4 KVA of distortion-free, ±0.1% electronically regulated power
- Reduces power line distortion to less than 0.3%
- Responds quickly—in less than 1/50 cycle or 0.00033 seconds
- Simultaneously provides 4 KVA of ±0.1% electromechanically regulated power
- Introduces no phase shift between input and output

PRINCIPLES OF OPERATION

The DEVR corrects for both waveform distortion and amplitude regulation by subtracting from the source a voltage equal to the instantaneous difference between the actual line voltage and a pure sinusoidal voltage of desired amplitude. The use of wideband electronic circuits gives practically instantaneous correction of any departure from a uniform sine wave within ratings. A feedback circuit continually compensates electromechanically for slower changes in line voltage, thereby making optimum use of the electronic channel. At the same time it serves as a separate source of regulated voltage for applications where normal line distortion can be tolerated.

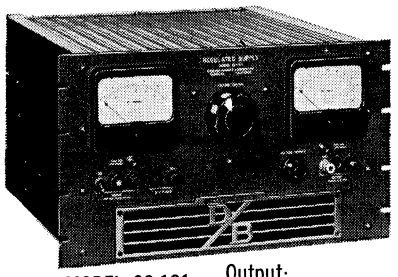
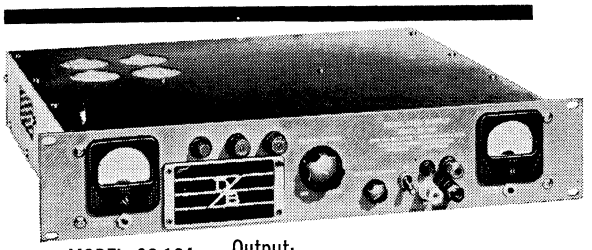
ALL-TRANSISTOR LABORATORY POWER SUPPLIES

D/B



MODEL 62-121 Output: 0.5 to 36 vdc 0 to 15 Amps.



MODEL 62-124 Output: 0.5 to 36 vdc 0 to 2 Amps.

- ***HIGH EFFICIENCY***
- ***EXTREMELY CLOSE REGULATION***

These models are the product of extensive research and development in transistor power supplies. Using *All-Transistor* circuits—there are no vacuum tubes or magnetic amplifiers—the units provide superb regulation and low ripple. Output is free of harmful spikes and transients.

Short-circuit proof. Current at full rating can be delivered continuously at any voltage—from 0.5 volts to 36 volts. Circuit developments (exclusive with D/B*) eliminate the necessity for heavy bleeders and thus increase the efficiency of these units.

Reliable forced-air cooling through the front panel inlet assures cool operation at all times.

INPUT
105-125 VAC, 60 cps, single phase. Other voltages and frequencies on special order.

OUTPUT REGULATION
For line changes between 105-125 VAC, less than 18 MV change in the output voltage.
For load changes between no load and full load, less than 18 MV change in the output voltage.

RIPPLE AND NOISE
Less than 1 MV RMS under any condition.

NO DERATING OF CURRENT OVER FULL OUTPUT VOLTAGE RANGE.

TRANSIENTS
Entirely free from transients in output due to line conditions. Entirely free of recurrent spikes. Maximum excursion due to switching of full load: 100 millivolts on Model 62-121 . . . 200 millivolts on Model 62-124; less for smaller changes in load.

OVERLOAD PROTECTION
Any overload causes instantaneous and complete shut-off of the output current by means of transistor switching. Pressing the START button will restore the output current if the overload has been removed. The power supply cannot be damaged by any overload condition.

STABILITY
Maximum of 5-millivolt average variation per hour over 8-hour period. Will maintain regulation despite rapid switching of full output current.

POLARITY
Floating output—either positive or negative may be grounded.

ERROR SENSING
Normally on front terminals. Rear-terminal or remote sensing on special order.

PANEL CONTROLS
AC switch and indicator light.
START button for making the supply operational after turning AC switch on, and for resetting after an overload condition.
Coarse and fine voltage control.

RESOLUTION
Vernier varies output 400 millivolts for 270° rotation.

METERING
Dual range 4.5-inch meters.
Ammeter: 0 to 5 amperes and 0 to 15 amperes on Model 62-121; 0 to 0.4 amperes and 0 to 2 amperes on Model 62-124.
Voltmeter: 0 to 8 volts and 0 to 40 volts. Meters are protected by use of push buttons for Low Ranges.

OPERATING TEMPERATURE
Ample forced air cooling through the front panel allows operation at high cabinet temperatures, providing the air inlet temperature does not exceed 50°C.

MULTIPLE OPERATION
Two supplies can be operated in series to provide up to 72 volts.

COLOR
Standard Dressen-Barnes gray; other colors at slight extra cost.

The ®REGATRON Super-regulated Series

The power supplies described on this page are called ®Regatrons. This term is used to describe Electronic Measurements' super-regulated power supplies. These power supplies incorporate a *patented regulating circuit which, in addition to providing superior regulation, makes possible the incorporation of several other important advantages without additional cost to the user.

Voltage Regulation

The extraordinary regulation found in every Regatron assures a smooth flow of d-c even when the power supply is set to provide less than a volt. A balanced zero-potential comparator is employed in an elementary, bridge-like configuration. Together with a high-gain loop amplifier, this circuit provides increasing gain with decreasing voltage . . with full loop gain available at zero output. The result is a stable power supply with a degree of performance exceeding that of a battery.

Programmable Regatrons

All Regatron Power Supplies have a main, as well as a vernier voltage control. In the programmable types, the output voltage can also be controlled remotely . . . this is called programming.

Programming is accomplised by simply shunting two front panel terminals with an ordinary one watt resistor. For each 1000 ohms shunted across these terminals, the power supply delivers one volt. For example, 22,500 ohms shunted across the programming terminals will set the power supply's output to 22.5 V. The resistor may be located at any convenient remote point.

Control systems of various types are easily engineered by using fixed resistors and stepping or multiple-position switches to obtain desired voltages. The programming resistor may also be variable for continuous voltage control. For more information on programming, please request eight-page Bulletin 76A and Data Sheet 21.

Constant Current

All programmable Regatrons are convertible to constant current by the user. The conversion is made by means of external connections only.

Other models (not listed) are specifically designed for constant current use. Request information from factory.

Regatron Features

- **local or remote voltage control (programmable models)**
- **panel calibrations for vernier and main voltage controls**
- **positive, negative or floating ground**
- **null balance adjustment**
- **calibration adjustment**
- **useable to a fraction of one volt**
- **negligible ripple**

ADVANCED FEATURES

Regatran Power Supplies utilize high-efficiency components for smallest size and lightest weight. They are rugged and dependable; utilizing etched circuitry, all-electronic transistor protection, plug-in series subassembly, and other advanced constructional features.

Wide-range models and narrow-range models marked with an asterisk have a programming (remote control) provision. This feature permits setting the output voltage to any value by shunting two terminals with a resistor. The power supply will deliver one volt for each 10 ohms placed across these terminals.

By utilizing several resistors and a multiple position switch, instant voltage changes can be made without using the front panel controls. In original equipment, this feature enables the designer to locate the power supply away from the main control panel, conserving panel space and grouping controls for the most convenient operation.

The ability to use the power supply with ungrounded output permits special circuit arrangements, i.e., utilizing the power supply to operate servo motors and other actuators with center-tapped grounded field.

CONSTANT CURRENT

All programmable Regatrans are convertible to constant current by the user. The conversion is made by means of external connections only.

Other models (not listed) are specifically designed for constant current use. Request information from factory.

* U. S. Patents Issued & Pending.

BUILT-IN DEPENDABILITY

*Regatran Semiconductor Power Supplies employ improved techniques of transistor application and protection. An exclusive, instantaneous, all-electronic circuit breaker, developed by Electronic Measurements Company, protects the transistors from damage due to short circuits.
The Regatran fully transistorized circuit employs such features as a balanced zero potential comparator system, high system gain . . . combining all the best advantages offered by transistors. Regatran Power Supplies operate in an efficient, stable and trouble-free manner. Wide range models will provide rated current and regulation even at voltages below one volt.

OPERATING FEATURES

All oprating controls are located on the front panel for greatest operating convenience. Resetting in the event of a short circuit is accomplished by simply actuating a front-panel switch. Calibration and null balance controls are also located on the front panel. In addition to the main voltage control, wide range models have a vernier control covering one volt.

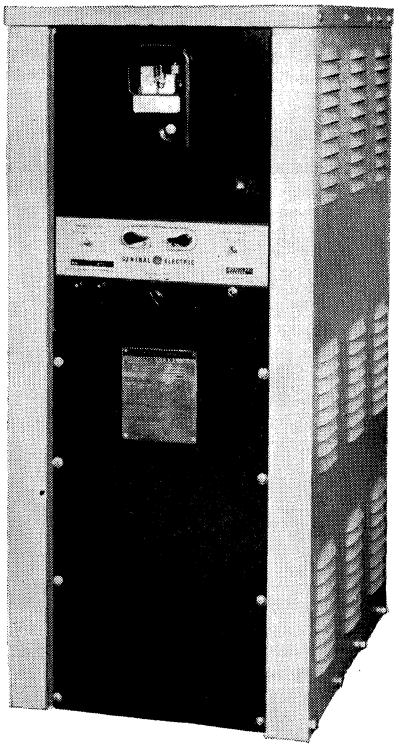
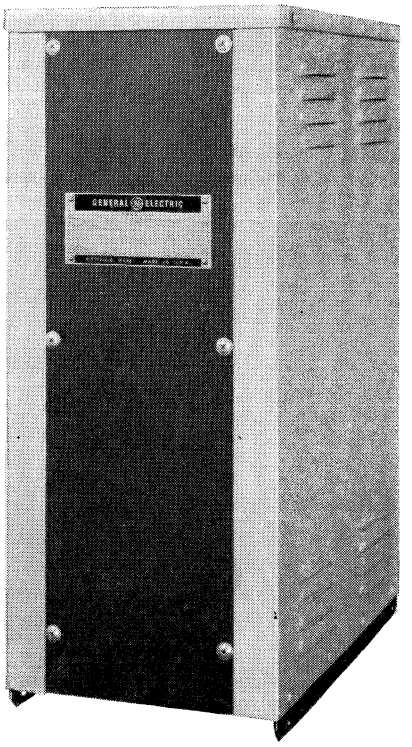
GENERAL ELECTRIC INDUCTROL* VOLTAGE REGULATORS

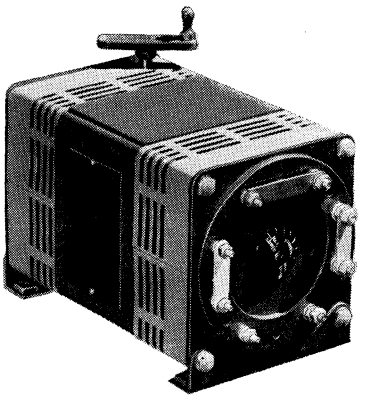
DRIFT-FREE, DISTORTION-FREE, STEPLESS VOLTAGE REGULATION



Automatic-Controlled



Motor-Driven



Hand-Operated

To meet the increasing demand for smooth and reliable voltage regulation in electronic apparatus, General Electric has designed a complete line of Inductrol* voltage regulators. Radar, TV-microwave, computer, and communications equipment can be made more reliable by providing accurate voltage control with Inductrol regulators.

The Inductrol regulator consists basically of a laminated steel stator, on which is wound the regulating (series) winding, and a laminated steel rotor on which is wound an exciting (shunt) winding. By changing the position of the rotor, the magnitude of the voltage induced in the series winding is controlled, thus adding to or subtracting from the supply voltage to produce the required output voltage.

Inductrol voltage regulators are available in many standard ratings up to 300-kva, single-phase, and 2000-kva, three-phase service. There are three types: hand-operated; motor-driven (controlled from a remote push-button station); and automatic (controlled from an Inductrol control panel which is an integral part of the Inductrol regulator, or which is mounted separately in a remote location of the customer's choosing). Ranges of regulation extend from ± 5 to ± 100 per cent (0 to 200 per cent of input voltage). Automatic Inductrol regulators are usually supplied for a-c voltage control. Inductrol regulator controls can also regulate a-c current or rectified d-c voltage or current. Automatic panels for cyclic industrial processes are also obtainable.

**Registered trade-mark of General Electric Company for induction voltage regulators.*

Features

No Brushes—High reliability because there are no brushes to wear out or to cause maintenance trouble. Simple and rugged, the induction principle of operation provides an infinite number of voltage levels.

No harmful wave-form distortion—The Inductrol regulator does not introduce harmful wave-form distortion.

Load power factor—Has no effect on the output voltage of automatic Inductrol regulators.

Drift-free controls—Voltage automatically held to within ± 1 per cent band width. Unique temperature and frequency compensated controls on Inductrol regulators make it unnecessary to continually reset voltage level.

High short-circuit strength—Electrically, the Inductrol regulator will withstand up to 25 times normal short-circuit current.

Overload characteristics—The Inductrol regulator will withstand up to 100 per cent overload for one hour while maintaining excellent long-life operating characteristics.

Basic Types of Inductrol Regulators

1. *Automatic*—Used to automatically provide a precisely regulated output voltage from a varying supply voltage.
2. *Motor-driven*—Used where an adjustable output voltage is required from a relatively constant supply voltage.
3. *Hand-operated*—Used to provide an adjustable output voltage from a relatively constant supply voltage.

Write for Bulletins GEC-1450 and GEA-6261.

converter need. Utilizing the most modern advances in magnet materials and in principles of application, units have been made amazingly compact, efficient and rugged. Maintenance attention has been reduced to that of a three phase induction motor. Long continued, dependable service with minimum risk of failure is achieved by "Nobrush" design. The many successful applications of "Nobrush" converters to the most trying industrial and military applications attest to their sound engineering and quality construction. With the large library of "Nobrush" designs, there is hardly a converter problem beyond its scope. Inquiries are invited for units not shown.

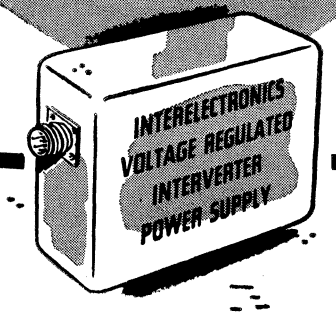
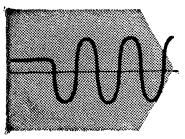
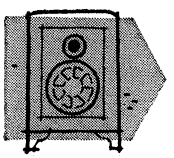
NEW!

DC to DC and DC to AC solid-state power converters voltage regulated, frequency controlled, for missiles, telemetering, gyros, servos

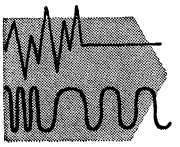




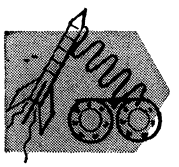
Interelectonics Interverter solid-state thyratron-like elements and magnetic components convert DC to any number of voltage regulated or controlled frequency AC or filtered DC outputs from 1 to 1800 watts. Light weight, compact, 90% or better conversion efficiency.



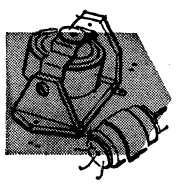
Ultra-reliable in operation, no moving parts, unharmed by shorting output or reversing input polarity. Complies with MIL specs for shock, acceleration, vibration, temperature, RF noise.



Now in use in major missiles, powering telemetering transmitters, radar beacons, electronic equipment. Single and polyphase AC output units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.



Interelectronics — first and most experienced in the DC input solid-state power supply field, produces its own solid-state gating elements, all magnetic components, has the most complete facilities and know-how — has designed and delivered more working KVA than any other firm!



For complete engineering data write Interelectronics today, or call LUdlow 4-6200 in N. Y.

SOLID-STATE COMPONENTS:

SMALLER, LIGHTER, MORE RELIABLE.

Hydro-Aire is developing these and related products for numerous ground-based and airborne applications. Ratings shown here are available, but do not describe the complete line. Our specialty is developing new products to your special requirements; we will welcome the chance to work with you.

HYDRO-AIRE

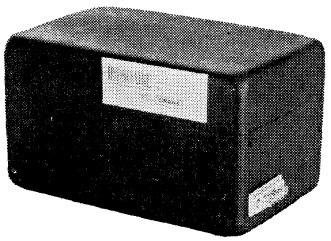
Power supply: Input 28vdc ±10%, output 150vdc ±1%, output load 100 to 200 ma. Units also available to 10kv, to 3kw, and with regulation down to ±0.1%.

DC-DC POWER SUPPLY

This solid-state device offers outstanding advantages over conventional dynamotors. Unit converts input voltages of approximately 28vdc to an output of 150vdc, which is regulated and essentially independent of line fluctuations or load variations. No moving parts; no brush wear, replacement, dust, or arcing; increased efficiency means lighter input batteries can be used.

Comparison of typical units

	Conventional Dynamotor	Hydro-Aire solid-state power supply
Volume	72 cu. in.	32 cu. in.
Weight	6 to 7 lbs	27 ounces
Efficiency	30% to 40%	80% to 90%

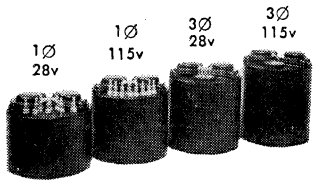


Model 50-011 3Ø voltage regulator; performance characteristics shown at right. Other models available: 1-, 2-, or 3-phase; 40 VA to 1.5 KVA; 60 to 1600 cps.

3-PHASE VOLTAGE REGULATOR

Especially valuable in missiles and similar applications where several voltages must be regulated and where weight is critical. One of these solid-state devices can replace six or eight separate regulators, each one of which contains inefficient "loss elements." Result: Weight savings up to 70%.

Typical characteristics:
Input Voltage: 102 to 125v line-to-neutral (−11% to +8%) (3-Ø, 4-wire)
Output Voltage: 115v ±1%, line-to-neutral (3-Ø, 4-wire)
Frequency range: 380 to 420 cps
Power: 400 watts
Efficiency: 95%
Life: 1000 hours
Operating temperature: −55°C to +71°C
Temperature effects on output voltage*: increases linearly to 0.8% ±0.2% at +71°C
decreases linearly to 1.2% ±0.3% at −55°C
*in accordance with missile specifications
Applicable specifications: MIL-E-5272, MIL-I-6181, MIL-E-7854, MIL-E-8189

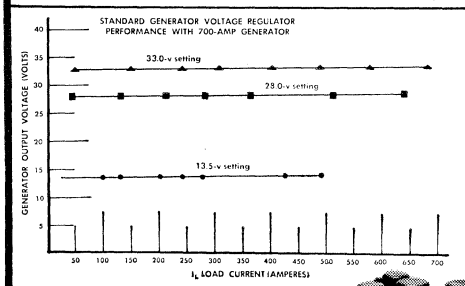


Four typical inverter ratings. Others available on request.

GYRO INVERTER

These compact, highly reliable DC-to-AC inverters are designed for use in driving synchronous rate gyros. Use of solid-state components eliminates drawbacks of d-c gyro motor, such as radio noise, brush wear, and the possibility of brush dust fouling precise gyro bearings.

Characteristics:
Input: 28vdc
Output: 115vac, single-phase, 400 cps
Load: 25-30 va starting, 20-25 va running
P.F.: 50%
Max ambient: 71°C



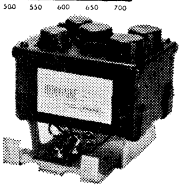
Regulation is virtually perfect at any setting.

VOLTAGE REGULATOR FOR DC GENERATORS

Completely transistorized, this unit weighs less than half as much as the conventional carbon-pile regulator it replaces.

Unlike the carbon-pile regulator, the new Hydro-Aire unit has no moving parts, requires no shock mounting, dissipates virtually no heat, requires no forced cooling, and adjusts to different voltages easily. Response time is improved by a factor of 5:1; operational life is extended to 10,000 hours.

The Model 50-029 is physically and functionally interchangeable with the Mil Standard carbon-pile unit—simply plug in to existing receptacle.



Dimensions: 3¼ x 4⅛ x 2⅞
Weight: 1¼ pounds
Temperature limits: −55°C to +71°C (units available for service to 125°C)
Voltage: may be set to any value between 26 and 30 volts, in increments of 0.1 volt
Rated life: 5000 hours
Maintenance: none required during the life of the regulator

* **REGULATION:** In the output voltage range the output voltage variation is less than the figure shown in the table for line fluctuations from 105 to 125 volts and load variations from 0 to maximum current. Regulation in the % column is the % regulation at the highest ouput voltage. At any setting of output voltage the △V for full line or load changes never exceeds the absolute value shown in the △V column.

RIPPLE: Less than the value shown in the table.

STABILITY: The output voltage variation is less than the regulation specification for a period of 8 hours.

RECOVERY TIME: Less than 50 microseconds. The excursion in the output voltage during the recovery period is less than the regulation specification for line fluctuations from 105 to 125 volts and load variations from 0 to maximum current. For Model 2000B the excursion in output voltage during the recovery time is less than 50 mv.

TEMPERATURE COEFFICIENT: Output voltage changes less than 0.01% per °C.

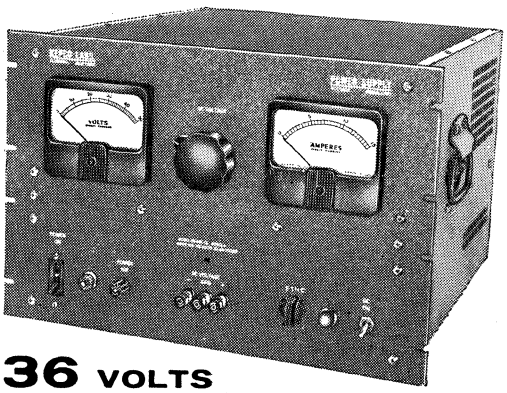
FEATURING:

- **Output voltage within 0.5% during recovery time for line transients 105-125 volts.**
- **Short circuit will not damage supply.**
- **Full current may be drawn at any voltage from 0.1-36 volts.**



MODEL KM236-15A

REGULATION: In the range 0.1-36 volts the output voltage variation is less than 0.5% or 25 millivolts for line fluctuation from 105-125 volts, and less than 0.5% or 25 millivolts for load variations from minimum to maximum current, whichever is greater.

RIPPLE VOLTAGE: Less than 0.5% or 25 millivolts RMS, (whichever is greater).

STABILITY: (for 8 hours) less than 0.5% or 25 millivolts (whichever is greaer).

TEMPERATURE COEFFICIENT: Output voltage changes less than 0.05% per °C.

AMBIENT OPERATING TEMPERATURE: 50°C maximum.

REMOTE ERROR SIGNAL SENSING is provided to maintain stated regulation directly at the load.

FUSE PROTECTION: Input fuse on front panel.

OVERLOAD PROTECTION: An automatic current limiting device allows direct shorting of the output terminals without damage to the supply.

POWER REQUIREMENTS: KM236-15A and 30 — 105-125 volts, 57-63 cycles. KM236-50 — 208V ± 10% or 230V ± 10%, 57-63 cycles, single phase.

METERS: Ammeter and Voltmeter 4½″ rectangular.

0.1-36 VOLTS IN 15, 30 AND 50 AMP. UNITS

OUTPUT TERMINATIONS: DC terminals are clearly marked on the front panel, except on Model KM-236-50 where they appear on the rear only. Either positive or negative terminal of the supply may be grounded. DC terminals are isolated from the chassis. A binding post is available for connecting to the chassis. All terminals are also brought out at the rear of the chassis. Two terminals are mounted at the rear of the chassis to provide for picking up the error signal directly at the load. This connection compensates for the voltage drop in the wires connecting the power supply to the load.

CONTROLS: Power on-off switch, DC on-off switch, coarse and fine voltage controls.

OPERATIONAL CHARACTERISTICS: This regulated unit consists of a ferro-resonant line regulator followed by a magnetic amplifier regulator. The ferro-resonant line regulator furnishes well regulated transient free AC power. The high gain magnetic amplifier is used to regulate the DC output voltage to compensate for voltage changes in the power unit for varying currents. The response time for pulse loads is less than 0.2 second.

✧These units are supplied in cabinets.

REGULATION: Less than ±1% for line changes from 100 to 130 volts. Control on front panel can be set to optimize load regulation at any given output voltage to within ±1%.

RIPPLE: 0.1% RMS of maximum output voltage at full load. Except Model 251 which is 0.5%.

STABILITY: For eight hours less than ± 1%.

AMBIENT OPERATING TEMPERATURE: 50° C maximum.

POWER REQUIREMENTS: 100-130 volts, 60 cycles.

OUTPUT TERMINATIONS: DC terminals are clearly marked on the front panel. Either positive or negative terminals of the supply may be grounded. DC terminals are isolated from the chassis. A binding post is available for connecting to the chassis. All terminals are also brought out at the rear of the chassis. Two terminals are mounted at the rear of the chassis to provide for picking up the error signal directly at the load. This connection compensates for the voltagle drop in the wires connecting the power supply to the load.

CONTROLS: Power on-off switch, DC voltage control and load regulation control are mounted on front panel.

METERS: Voltmeter and ammeter included — 2½″ wide view.

OPERATIONAL CHARACTERISTICS: This regulated unit consists of a ferro-resonant line regulator followed by a magnetic amplifier regulator. The ferro-resonant line regulator furnishes well regulated transient free AC power. The high gain magnetic amplifier is used to regulate the DC output voltage to compensate for voltage changes in the power unit for varying currents. The response time for pulse loads is less than 0.3 second.

- Maximum reliability. ■ No warm up time.
- Minimum maintenance. ■ Negligible drift.
- Resolution good. ■ High efficiency
- Short circuit and overload protection.
- Excellent line transient response.

★ ***GOOD*** **STABILITY**
★ ***LOW*** **OUTPUT IMPEDANCE**

KR Power Supplies are conservatively rated and are designed for continuous duty at 50°C ambient.

REGULATION: In the output voltage range the output voltage variation is less than the figure shown in the table for line fluctuations from 105 to 125 volts and load variations from 0 to maximum current. Regulation in the % column is the % regulation at the highest output voltage. At any setting of output voltage the △V for the full line or load changes never exceeds the absolute value shown in the △V column.

RIPPLE: Less than 3 mv. RMS.

STABILITY: The output voltage variation is less than the regulation specification for a period of 8 hours.

RECOVERY TIME: Less than 50 microseconds. The excursion in the output voltage during the recovery period is less than the regulation specification.

AMBIENT OPERATING TEMPERATURE: 50°C maximum.

TEMPERATURE COEFFICIENT: Output voltage changes less than 0.01% per °C.

OUTPUT IMPEDANCE: Less than the figure in tables.

- All AC Voltages are unregulated.
- Fast recovery time, suitable for square wave pulsed loading.

GENERAL SPECIFICATIONS

Sufficient tolerance is incorporated in the specifications to allow for normal commercial component and tube deviations. Tube replacements may be made with any equivalent tubes meeting E.I.A. specifications.

INPUT

105-125 VAC, 50-400 CPS, single phase. Exceptions: Models 50, 50R and 71—105-125 VAC, 50-60 CPS.

DC OUTPUT

Voltage Range: Continuously variable over ranges specified, except where otherwise noted.

Current Range: The current ranges given apply to the entire DC output voltage range, and for input voltages from 105 to 125 VAC. No "de-rating" is necessary.

Polarity: Either positive or negative terminal may be grounded.

AC OUTPUT

The AC output is unregulated, isolated and ungrounded. It has a value of slightly higher than 6.3 V (when fully loaded) at an input of 115 VAC. This value allows for voltage drop in connecting leads. Dual outputs may be connected in series or parallel.

DUTY CYCLE

Continuous duty at full load.

METERS

Where meters are indicated, a separate voltmeter and milliammeter are provided.

OVERLOAD PROTECTION

Ample protection is provided against external overload and internal failure conditions by means of fuses.

Circuit breakers of the magnetic, "trip-free" type are employed in Models 50, 50R, 71 and LT series as protection against external overloads. And in the LT series, the transistor complement is independently protected by special transistor circuitry.

STYLE

Rack Models are designed for mounting on standard 19" relay racks.

Bench Models are provided with compact, specially-designed, ventilated cabinets equipped with carrying handles. The power supply units may be removed from their cabinets for mounting in standard relay racks (except Models 25, 26 and 71).

RATINGS AND COMPONENTS

All components used are of the highest quality and are operated well within manufacturers ratings. Hermetically sealed, oil-filled capacitors are used exclusively, except in LT series, where special high purity foil, long-life electrolytics are used. Ample safety factors are provided in the design to insure the long life, and the dependable, trouble-free operation so desirable in industrial and laboratory appilcations.

All specifications and prices subject to change without notice.

MRC DUAL REGULATED POWER SUPPLIES

GENERAL DESCRIPTION

MRC Power Supplies are tubeless-precision-airborne power sources. Magnetic flux oscillator circuitry is used to provide precision regulated transient-free DC output voltage.

The units are tubeless, dual magnetic systems which effectively isolate line voltage transients from the output and regulates DC to 0.1% accuracy. All units are short circuit proof and require no fusing. Most units are hermetically sealed with all components cast in thermosetting plastic and meet Specification MIL-T-27 and MIL-E-5272-A. The units operate on standard 115V-400 cycle aircraft supply mains.

The regulators provide for a very precise regulation of the DC output voltage, irrespective of change in line voltage, line frequency, or DC load current. The two magnetic regulators operate independent of each other. One regulator corrects for line changes. It virtually eliminates any line transients from disturbing the DC output voltage. The second regulator corrects changes in DC output voltage which are due to change in DC load current. Inasmuch as these two regulators are of the static magnetic type (magnetic amplifier type) they are extremely reliable and not subject to wear.

This dual magnetic regulation system is an exclusive MRC development. It achieves a superior DC voltage regulation never before obtained with magnetic amplifier type voltage regulator systems. The high overall efficiency, the great reliability, the transient free output voltage, and the low internal impedance make the power supplies ideal for all types of applications where precision regulated DC voltage is required.

SOLID STATE DC Power Supplies

NO COMPROMISE
WITH QUALITY!

NOTES

METERS: Ammeter and voltmeter furnished as standard equipment on all models. 3" or 4½" rectangular (depending on panel height) ±2% of full-scale, single range. Unmetered models and multiple ranges available on special order only.

POLARITY: All supplies can be floated up to 500V peak off ground. Either polarity may be grounded to chassis. Ground terminal provided.

DERATING: These supplies are rated for continuous duty at 45°C ambient temperature. Consult our engineering department for ratings at higher ambient temperatures.

TRANSIENT RESPONSE: These supplies exhibit "zero-lag" behavior. Their output voltage will not leave the specified static regulation region for instantaneous, prolonged "steps" of line voltage of ±10%, nor a regulation region of ±1% of maximum rating, for instantaneous, prolonged "steps" of load current of ±25% of maximum rating. Recovery to rated static regulation region is complete in less than 50 microseconds.

TOTAL STATIC REGULATION: The static regulation figures given in the chart to the right refer to line voltage variation of 115V ±10%, and static load current changes from 0-100% of rating. When regulation is given as "±__% or ±__millivolts", the larger value (at any given output voltage) governs. Line regulation is preserved over input frequency range of 55-65 cps, or 380-420 cps; 55-65 cps models are standard. Nominal additional charge is made for modifying a unit for 400 cps input.

FINISH: The exterior finish is smooth light grey enamel (Mil spec # MIL--E-15090). Interior metal work has appropriate baked enamel or plated finish. Other finishes on special order only.

CONSTRUCTION: Solid State supplies are normally furnished as rack equipment with full dust covers. They are entirely suitable for bench use as normally constructed. Consult our engineering department for quotations on special cabinetry or sub-chassis construction.

INPUT-OUTPUT TERMINATION: All terminals on rear, through appropriate barrier strip.

REMOTE SENSING: All models are provided with remote sensing circuits to permit reduction of static regulation errors due to external wiring. This feature does not eliminate transient errors due to long-line impedance.

TUBELESS: Completely transistorized. Semi-conductor rectifiers, zener-diode reference standards, transistor series regulators, transistor loop amplifiers. Some high-current models have magnetic-amplifier "buffer" to limit transistor dissipation under extremes of line voltage and load current.

SOLID STATE DC Power Supplies

NO COMPROMISE
WITH QUALITY!

NOTES

SHORT-CIRCUIT PROOF! Not just short-circuit protected, but completely impervious to short-circuits. A simple and effective, completely passive circuit configuration forces the output fuse or circuit breaker to blow before transistors or other circuit components can be damaged. No "current-limiting" gimmicks to fail!

COMPACT! More power supply per inch of panel height than ever possible with other techniques.

EFFICIENT! Up to 50 times as efficient as vacuum tube supplies of equivalent ratings.

ZERO-LAGGED! Achieve transient-free performance without massive capacitor banks.

DEPENDABLE! MIL-T-27A style transformers, 100% wire-wound resistors, high-purity foil and paper capacitors, extremely conservative transistor dissipation, current, and voltage rating, and high quality construction ensure the utmost in dependability. No compromise with quality!

ECONOMICAL! Less expensive than comparable vacuum tube equipment.

LOW IMPEDANCE! High-gain loop amplifier and large output bypass capacitor ensure maintenance of low output impedance up to low radio frequencies.

LOW DRIFT! Balanced differential input in loop amplifier and double-stabilized zener reference ensure stability against temperature and time.

RUGGED! Ideal for applications involving moderate shock and vibration. Circuit exhibits no significant microphonics under these conditions.

ATTRACTIVE! Clean panel layout, smooth enamel finish, make for a striking, modern appearance.

VERSATILE! Widest range of voltage and current ratings in the field!

EXCEPTIONAL STABILITY AND REGULATION! The COMBINED load and line regulation of these units compares favorably with the regulation for load alone, offered by equivalent competitive power supplies.

NOTES

METERS: Ammeter and voltmeter furnished as standard equipment on all models. 4½" rectangular, accuracy ±2% of full-scale, single range. Unmetered models and multiple ranges available on special order only.

POLARITY: All supplies can be floated up to 500V peak off ground. Either polarity may be grounded to chassis. Ground terminal provided.

FINISH: Front panels are finished in light grey hammertone baked enamel. Frames and chassis have baked enamel or appropriately plated industrial finishes. Cabinets have contrasting dark-grey hammertone baked enamel finish. Other finishes on special order only.

INPUT-OUTPUT TERMINATION: All terminals at rear of chassis. Lower current models employ phenolic barrier terminals of appropriate size. Higher current models have threaded-stud output terminals.

RIPPLE: TRM units have less than 1% RMS ripple at any output voltage or current within rating.

STATIC LOAD REGULATION: The static load regulation of any TRM supply will not exceed 0.1% or 50MV, whichever is greater, for 0-100% load change at constant line voltage.

STATIC LINE REGULATION: The static line regulation of any TRM supply will not exceed 0.1%, or 50MV, whichever is greater, for a ±10% line voltage change, at constant load.

TRANSIENT RESPONSE: The transient response of TRM supplies is best described by two parameters: The so-called "turn-around" time, and the "response time **constant**". These are depicted on the graph to the right. The "turn-around" time, Δ **t**, is used for computing the necessary "zero-lag" capacitor bank requirement for an allowable output voltage deviation, Δ V, which results from either a load current step, Δ I, or from a line voltage step, Δ E_1. In the formula given below, I_0 is the maximum current rating of the supply. E_1 is the nominal line voltage rating of the supply, and C is the capacitor bank capacitance in farads. The table lists conservative values of Δt for both single-phase and three-phase units. The formula given is approximate, but conservative.

$$C = \frac{[\Delta I + \frac{\Delta E_1}{E_1} I_0]\ \Delta t}{\Delta V}$$

example: To determine the capacitance required to hold the maximum output voltage excursion of a TRM-40-15 to 1 volt, against the worst **simultaneous** combination of a 3-ampere load "step" and a 10% line step:

$\Delta V = 1.0$ volt

$\Delta I = 3.0$ amperes

$\Delta E_1 = 10\%$ of E_1, so that $\frac{\Delta E_1}{E_1} = 0.1$

Δt (from chart, above) $= 0.025$ seconds

$I_0 = 15$ amperes

$$C = \frac{[3.0 + (0.1)\ 15]\ 0.025}{1.0} = 0.112 \text{ farads}$$

use 50 volt, 0.2 farad bank (CB-50B) selected from chart at right.

NOTE: TRM power supplies may require adjustment for optimum operation with an external capacitor bank. If the supply and capacitor bank are ordered together, this adjustment will be performed by the factory, without charge.

	15 volts (for 10V supplies)	25 volts (for 20V supplies)	50 volts (for 40V supplies)	125 volts (for 80V supplies)	200 volts (for 160V supplies)

HIGH CURRENT—TIGHT REGULATION. THESE SUPPLIES COMBINE MAGNETIC AMPLIFIER REGULATORS, WITH THEIR HEAVY CURRENT CAPABILITIES, AND TRANSISTORIZED DRIVER AMPLIFIERS, WITH THEIR HIGH-SPEED RESPONSE. THE RESULT IS A HIGH-POWER UNIT WITH THE PRECISE REGULATION OF A LIGHT-DUTY LABORATORY POWER SUPPLY. THE SENSITIVITY AND SPEED OF RESPONSE OF THESE UNITS EXCEED THAT OF ANY OTHER MAGNETICALLY-REGULATED SUPPLY; YET THESE CHARACTERISTICS ARE NOT ACHIEVED AT THE EXPENSE OF RELIABILITY OR IMMUNITY TO LOAD FAULTS. THERE ARE NO TRANSISTORS IN SERIES WITH THE POWER PATH, AND THE REGULATING ELEMENT IS DESIGNED SO THAT THE UNIT CANNOT BE DAMAGED BY AN EXTERNAL SHORT CIRCUIT.

QUALITY. THIS EQUIPMENT EMPLOYS THE BEST COMMERCIAL GRADE OF TRANSFORMERS, SEMICONDUCTORS, RESISTORS, AND CAPACITORS. RIGID QUALITY CONTROL AND THOROUGH TEST PROCEDURES ENSURE DEPENDABILITY.

HIGH VOLTAGE DC Power Supplies

AIR AND OIL-INSULATED
WITH OR WITHOUT LINE REGULATION

NOTES

METERS: Three-range meters are standard, except in the HP-5. All three meter ranges are individually hand-calibrated to ±2% of full scale. Recalibrateable in field by screwdriver adjustment. Ranges are selected for best overlap and easy reading.
Meters are 4½" rectangular (3½" rectangular for HP-5).

POLARITY: Quickly reversible by means of two accessible internal jumpers. Reversal automatically grounds the selected "low" terminal. Meter polarity is reversed by front-panel switch.

RIPPLE: All H-line and HP supplies have capacitor-input filters. HH-line supplies have choke-input filters. In capacitor-input filters, the ripple magnitude is directly proportional to the output current, and the ripple **percentage** is inversely proportional to the selected value of output voltage. In choke-input filters, the ripple **magnitude** is directly proportional to the voltage selected, and the ripple percentage is essentially constant over the entire output voltage and current range. Additional filtering available on special order.
The following chart lists the maximum RMS ripple at maximum rated voltage and maximum rated current for all units.

% RMS Ripple	Model Numbers	Type of Filter
1.0	H-20/30/35/51,	Capacitor
1.0	HH-320/410/600. HH-140/230/150/240/330/520/710.	Choke
2.0	HP-5, H-15/26/36/40/43/50/54/60/80/90.	Capacitor
3.5	H-16/23/24/27/33/41/45/61/62/71.	Capacitor

STATIC LOAD REGULATION: Including the safety resistor in the output lead, H-line supplies exhibit a static load regulation of approximately 15-25%. Model HP-5 has internal provisions for changing the load regulation from approximately 25% to approximately 15%.
HH models have approximately 10% internal regulation.
Check our engineering department for information on improving the static load regulation of any supply.

INPUT-OUTPUT TERMINATION: Model HP-5 is provided with a three-wire line cord and plug. H-line supplies are provided with a heavy duty industrial "Twistlok" plug. H and HP-supplies are provided with at least 10 feet of shielded, flexible, high voltage coaxial cable. In tank units, this cable is provided with a disconnect plug.

FINISH: Front panels are finished in grey hammertone baked enamel. Cabinets and tanks have contrasting dark grey hammertone baked enamel finish. Other finishes on special order only.

Models H-60/61/62/71/80/90 are oil insulated. They are always furnished **less oil**, to save high shipping cost. Approximately 50 gallons of high grade transformer oil are required for all models except H-90, which requires approximately 100 gallons.

THYRATRON REGULATED DC Power Supplies

FAST RESPONSE
ET STYLE or ZERO-LAG STYLE

NOTES

RIPPLE: ET units have less than 1% RMS ripple at any output voltage or current within rating. Zero-lag units have less than 0.1% RMS ripple at any output voltage or current within rating.

STATIC LOAD REGULATION: The static load regulation of any NJE thyratron supply will not exceed 0.1% or 50 millivolts, whichever is greater, for 0-100% load change at constant line voltage.

STATIC LINE REGULATION: The static line regulation in any NJE thyratron supply will not exceed 0.1% or 50 millivolts, whichever is greater, for ±10% line voltage change, at constant load.

METERS: Ammeter and voltmeter furnished as standard equipment on all models. 4½" rectangular, accuracy ±2% of full-scale, single range. Unmetered models and multiple ranges available on special order only.

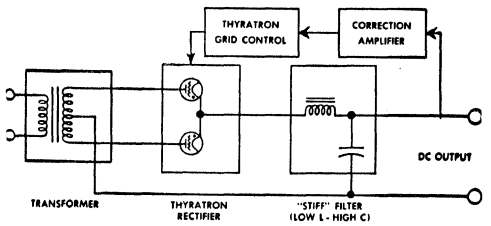
TRANSIENT RESPONSE: The curves drawn to the right represent the behavior of the supplies in response to either a ±10% instantaneous line voltage step, infinitely prolonged, or a ±25% load current step, infinitely prolonged. As noted elsewhere on the page, additional capacitor banks may be purchased separately, and added to the zero-lag units, so that they will have even "stiffer" transient properties.

POLARITY: All supplies can be floated up to 500V peak off ground. Either polarity may be grounded to chassis. Ground terminal provided.

FINISH: Front panels are finished in light grey hammertone baked enamel. Frames and chassis have baked enamel or appropriately plated industrial finishes. Cabinets have contrasting dark-grey hammertone baked enamel finish. Other finishes on special order only.

INPUT-OUTPUT TERMINATION: All models up to 30 amperes have both front and rear terminals. Higher current models have outputs at rear only. All input terminals are at rear only.

REMOTE SENSING: All models are provided with remote sensing circuits to permit reduction of static regulation errors due to external wiring. This feature does not eliminate transient error due to long-line impedance.



THE ZERO-LAG DC SYSTEM

For additional zero-lagging (against load transients larger than ±25%) for lower ripple, or for less than ±1% maximum deviation on normal load or line transients, one or more of the capacitor banks listed on page 3 can be added to any zero-lag supply. These banks are also useful for "zero-lagging" our brute force supplies. However, they should be purchased together with the power supply, so that adjustment for proper operation, when required, can be made at the factory. (This adjustment is made without charge.) Check our engineering department for details.

THYRATRON REGULATED DC Power Supplies

FAST RESPONSE
ET STYLE or ZERO-LAG STYLE

EXCELLENT REGULATION: The static regulation of these supplies is comparable to that of the finest vacuum tube equipment, despite the large current ratings, and is superior to most conventional magnetic-amplifier-regulated equipment of comparable ratings. The transient regulation of the large zero-lagged supplies is unmatched by any equipment of comparable power rating.

ECONOMY Thyratron rectification is a very economical way of creating large DC power sources. Compare performance per dollar before investing in outmoded equipment!

QUALITY: NJE thyratron supplies employ only Xenon thyratrons of the highest quality. The other thermionic tubes in the equipment are thoroughly derated, and are contained in a single, pluggable assembly to permit rapid maintenance. The power and filter components of these supplies are of the same high quality found in all NJE industrial equipment. Rigid quality control and complete test procedures ensure a dependable product.

Model Z-51-CM zero-lagged thyratron DC supply. 64-160V, 0-10 amperes.

VACUUM-TUBE REGULATED DC Power Supplies

STANDARD GRADE

NOTES

METERS: Ammeter and voltmeter furnished as standard equipment on all models. 3" or 4½" rectangular (depending upon panel height), accuracy ±2% of full-scale, single range. Unmetered models available on S-1001 and S-1003. Other models can be furnished without meters on special order only.

POLARITY: All supplies can be floated up to 500V peak off ground. Either polarity may be grounded to chassis. Ground terminal provided.

DERATING: These supplies are rated for continuous duty at 45°C ambient temperature. Consult our engineering department for ratings at higher ambient temperatures.

TRANSIENT RESPONSE: These supplies exhibit zero-lag behavior for ±10% line transients and for ±20% load transients. By "zero-lag" we mean the output voltage never leaves the specified regulation region, even in response to instantaneous (square-wave) step loading or instantaneous (prolonged) step line voltage changes.

FINISH: Front panels are finished in light grey hammertone baked enamel. Frames and chassis have baked enamel or appropriately plated industrial finishes. Cabinets have contrasting dark-grey hammertone baked enamel finish. Other finishes on special order only.

INPUT-OUTPUT TERMINATION: All terminals at rear of chassis. Phenolic barrier strips employed throughout all models.

STATIC LOAD REGULATION: The static load regulation figures given in the charts to the right describe the behavior of the supply from no load to full load at constant nominal line voltage input. It is assumed that the load variation is slow. For transient response, see note above. When the load regulation is given as " % or MV" it is understood that the larger figure governs.

STATIC LINE REGULATION: The static regulation figures given in the charts to the right describe the behavior of the output voltage at any constant load within rating when the line voltage input is slowly varied over 115V ±10%. For transient behavior see note above. When the line regulation is given as " % or MV" it is understood that the larger figure governs. Line regulation holds over 55-420 cps input frequency range.

DUAL SUPPLIES are furnished as three separate elements:
Two single supplies (see chart above) PLUS a dualling panel 7" high x 14¾" deep, x 19" wide. An interconnecting cable is furnished. Weight of dualling panel, 40 lbs. Cabinet versions are mounted in dark-grey bench cabinets 21¾" wide, 15" deep. Cabinet height = total panel height PLUS 1¾". For cabinet version, substitute "C" for "R" in model number.

* Models S-21001 and S-21003 have "commoned" negative terminal when placed in Series-Opposing mode, permitting current-sink operation.

Unique interconnection forces accurate load sharing.

PARALLEL

Generous insulation margins permit any ground and any polarity choice within single-supply ratings.

AIDING — **OPPOSING**

Permits operation down to zero without loss of regulation efficiency. Preload automatically connected to permit full current pumpback.

ISOLATED

Complete independence is achieved through circuit isolation of all elements of each single supply.

THE EXCLUSIVE NJE DUALLING CIRCUIT: 4 DISTINCT MODES OF OPERATION

FOR ECONOMY AND COMPACTNESS

STANDARD GRADE

Specifications held throughout normal tube life.

Generous safety-margins prevent self-damage due to overload. No electrolytics.

SILICON BRUTE FORCE DC Power Supplies

with or without line regulators

NJE

NOTES

RIPPLE: Less than 1% RMS at any output voltage or current within rating.

STATIC LOAD REGULATION: Expressed as percentage of maximum rated voltage for 0-100% load change, at constant line voltage.

METERS: Ammeter and Voltmeter furnished as standard equipment on all models. 4½" rectangular, accuracy ±2% of full-scale, single range. Unmetered models and multiple ranges available on special order only.

POLARITY: All supplies can be floated up to 500V peak off ground. Either polarity may be grounded to chassis. Ground terminal provided.

FILTER: All models employ **choke-input** filter, heavily preloaded for best regulation.

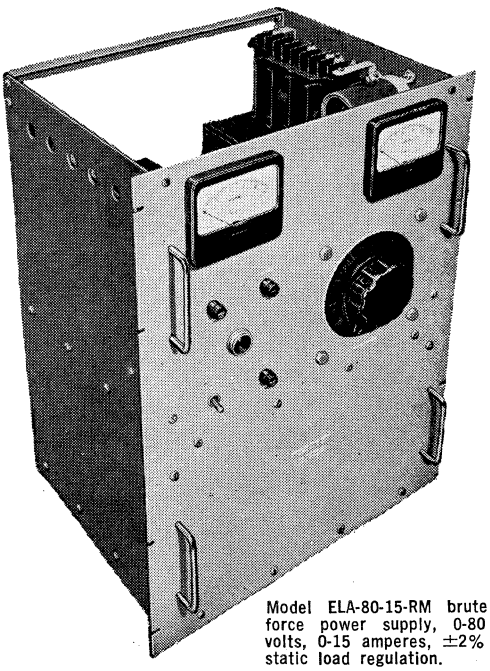
DERATING: All components are generously derated for long, trouble-free life at 35°C maximum ambient temperature. Further derating by the customer will result in tighter "apparent load regulation", since regulation curve is essentially linear with load current.

TRANSIENT RESPONSE: These supplies may be "zero-lagged" by the addition of appropriate capacitor banks. Capacitor banks listed on page 3 for TRM supplies may be conveniently added. Consult our engineering department for details. "Zero-lag" is defined in description of thyratron supplies, page 7.

LINE REGULATOR: All line-regulated equipment employs NJE's improved version of the well known ferro-resonant principle. Response time is less than 2 cycles of line, and regulator is adjusted for "constant-average" rather than "constant-RMS". Oversized magnetic components, high-temperature insulation, and conservative design of resonating capacitors insures longer life and less thermal drift than formerly possible. These line regulators **are** frequency sensitive. Check our engineering department for solution to variable frequency problems.

FINISH: Front panels are finished in light grey hammertone baked enamel. Frames and chassis have baked enamel or appropriately plated industrial finishes. Cabinets have contrasting dark-grey hammertone baked enamel finish. Other finishes on special order only.

INPUT-OUTPUT TERMINATION: All input terminals at rear of chassis. Output terminals available on front panel and at rear of chassis. Lower current models employ phenolic barrier terminals of appropriate size. Higher current models have threaded-stud output terminals.



Model ELA-80-15-RM brute force power supply, 0-80 volts, 0-15 amperes, ±2% static load regulation.

CONSTRUCTION: Tubeless. No moving parts. Quiet operation. Advanced form of proven resonant-saturation principle. Grade 1 is hermetically-sealed in steel can, per MIL-T-27A. Grade 3 is open core and coil construction per MIL-T-27A.

ALSO AVAILABLE: Commercial Models—
Featuring the same excellent performance characteristics, and manufactured under the same rigid quality control standards as the militarized regulators, these units offer the economy of commercial construction, for those applications where military characteristics are not needed or specified.

MODEL VR504 "Constant Average" performance, 500VA. Same specifications as model CAV-5-AA-3M, but utilizes commercial components.

MODEL VR505 "Constant RMS", 500VA. Same as model CRM-5-AA-3M, but utilizes commercial components.

Several modules of either the VR504 or VR505 can be operated in parallel for higher output ratings in multiples of 500VA.

MODEL CRM-20-AA-3M
Designed to conform to MIL-T-27A, Grade 3, Class T, Life Expectancy X.
Capacitor to JAN-C-25A.
Input 100-130V, 60 cps, output 115V ± 1%, 60 cps, "constant RMS", at 2000VA.

MODEL CAV-5-AA-1M
Designed to conform to MIL-T-27A, Grade 1, Class T, Life Expectancy X.
Capacitor to JAN-C-25A.
Input 100-130V, 60 cps, output 115V ± 1%, 60 cps, "constant average" at 500VA.

STANDARD MODELS:

MODEL NUMBER*	OUTPUT RATING	TOTAL STATIC† REGULATION
CAV-5-AA-1M or -3M	500VA	±1.5%
CRM-5-AA-1M or -3M	500VA	± 1 %
CAV-10-AA-1M or -3M	1000VA	±2.5%
CRM-10-AA-1M or -3M	1000VA	± 1 %
CAV-15-AA-1M or -3M	1500VA	±2.5%
CRM-15-AA-1M or -3M	1500VA	± 1 %
CAV-20-AA-1M or -3M	2000VA	±2.5%
CRM-20-AA-1M or -3M	2000VA	± 1 %

* CAV models are adjusted for "constant average" performance.
They are designed to function as the electrical source for a "brute-force" DC power supply; their constant-average waveform insures minimum regulation of the DC output voltage of the supply, regardless of variations in the voltage of the line feeding the regulator, and regardless of variations in the external load (additional to the normal bleeder load) on the power supply.
CRM models are adjusted for "constant RMS" performance.
They are designed for use with heater and lamp loads.
Models designated -1M are hermetically sealed in steel cans per MIL-T-27A.
Models designated -3M are open-core-and-coil construction per MIL-T-27A.

† For worst possible combination of: input variations from 100 to 130 volts, load variations from zero to full load (CRM), from bleeder load to full load (CAV).

CUSTOM DC POWER SUPPLIES AND POWER SUPPLY SYSTEMS

NJE LEADS THE CUSTOM FIELD

COMPUTER POWER SUPPLIES: During the past two years, NJE has manufactured large power supply systems for 12 of the 14 major computer manufacturers in this country! We are proud that these "giants" of the industry have turned to us again and again for the specification, design, development, and construction of the power supply for some of their most important computers and data processing systems. We believe that our broad experience in the many specialized power supply, distribution, sequencing, protection, and marginal-checking problems associated with high-reliability computation systems justifies their choice of NJE.

MILITARY POWER SUPPLIES During the same period, we designed and built power supplies and power supply systems for 7 of the nation's 12 major missile programs. Our experience encompasses ground, air, and marine equipment to almost all the current military specifications. Many of our standard catalog items can be modified to military specifications on relatively short delivery cycles.

AUTOMATION POWER SUPPLIES Many of our stock model and custom power supplies, particularly the tubeless, high reliability equipment required for high current and power levels, have been successfully applied to industrial automation systems. *MVAU SERIES

7 Models . . . 3-20 Amperes

(*Maximum VA Utilization)

Nutron's MVAU series are variable regulated AC power supplies providing essentially distortion-free output waveform. They are particularly useful where output voltage must remain constant under varying line voltage conditions. Maximum VA output is obtained down to the lower voltage settings through the use of a high current capacity transformer. Additional line outlets are provided for regulated fixed 115V and variable regulated AC. Models are available with maximum current ratings from 3 to 20 amperes.

A.C. INPUT: 208/230/460 volt ±10%, 3 phase, 60 cycle.

RIPPLE: Less than 1% RMS.

RESPONSE TIME: A special control internally mounted in the Power Supplies handles adjustment of response time. The "load on" response time is adjustable from 20 to 200 milliseconds, and the "load off" from 40 to 400 milliseconds. An important advantage of this adjustable response is when used with inductive loads, such as inverters; recovery can be adjusted to avoid interaction between inductive load and power supply.

TECHNICAL DESCRIPTION

These units use silicon power rectifiers for increased reliability and efficiency. Silicon rectifiers provide constant efficiency and exhibit no aging characteristics as is more common in other type rectifiers. Magnetic components utilize grain oriented silicon steel and Class B insulation for compact design and efficient operation. The power section consists of a 3 phase magnetic amplifier with extremely high gain. Preamplifier is fully transistorized and utilizes silicon zener diodes as a reference element.

ADDITIONAL FEATURES

Output of units can be shorted without damage to the silicon rectifiers.

Units can withstand 400% overload for periods up to 1 second without damage to Power Supply components.

Remote sensing
low output impedance

Militarized versions of above units are also available.

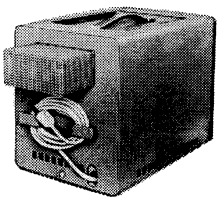
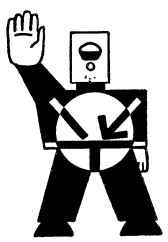
SEMICONDUCTORIZED POWER SUPPLIES

featuring

ROBOTEC • HEATRAN • VOLTRAN PROTECTION



Power Designs' *Semiconductorized* Power Supplies utilize the unique properties of semiconductor devices to create new circuit concepts achieving performance, efficiency and reliability hitherto unattainable. These instruments are NOT conventional transistorized versions of vacuum tube regulators.



ROBOTEC*

is an inherent electronic circuit producing simultaneous current and voltage cutoff upon external short circuit. The "ROBOTEC" circuit operates in 30 microseconds holding the power supply cut off until manually reset and reducing line input power to a negligible value. If an external short circuit exists the power supply cannot be turned on.

*U.S. Pat. Pending

HEATRAN†

is a transistorized circuit continuously monitoring dissipation in the series power transistors of the regulator system. Dissipation above a preset maximum value is automatically transferred into external vitreous enamel resistors extending from the rear of the equipment in a perforated metal cage. "HEATRAN" thus permits fewer transistors for a given power supply capacity, more compact equipment with increased reliability and practical convection cooling.

VOLTRAN†

is a transistorized circuit continuously monitoring the voltage drop in the series power transistors of the regulator system. Voltages above a preset maximum are instantaneously absorbed thus protecting these transistors against line and load transients and permitting more conservative voltage derating.

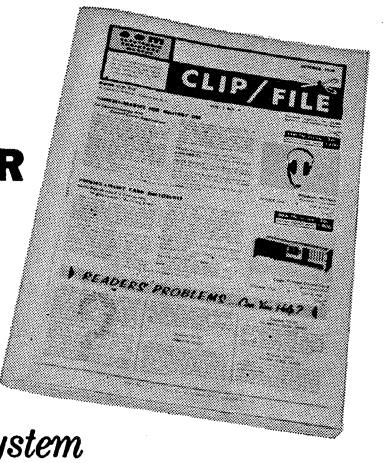
WORKING TOGETHER TO GIVE YOU COMPLETE PRODUCT INFORMATION



...and a self-indexing filing system

Here's How It Works . . .

It all starts with the annual *eem*-Electronic Engineers Master. *eem* categorizes the electronic industry into 51 major product groups. Numerically they run from Section 1100 through 6000 and appear at the top of each *eem* catalog page. These same section numbers are used as the index for your personal filing system.

Monthly, you'll receive *CLIP/FILE*, the new product newspaper. Each *CLIP/FILE* new product item includes an *eem* file system number. You simply clip each release along the perforated line, and file it in its appropriate folder.

Each time you refer to *eem* and wish to check for additional information, merely look for the section number at the top of the *eem* page and select the corresponding file folder. There, at your fingertips, is the necessary data to bring you up-to-the-minute.

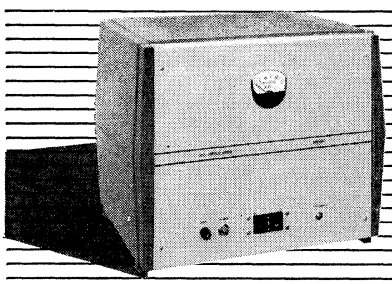
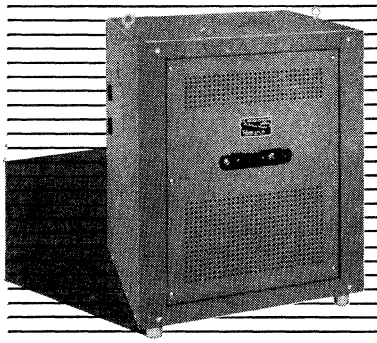
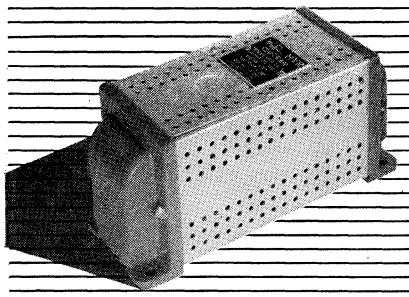
Check Sorensen . . . for your power supply requirements



New tubeless 0.1% a-c line regulators give up to 5kva out. High output and fast response result from a unique combination of semi-conductor and magnetic amplifier principles in the new Sorensen Model R3010 and R5010 a-c line regulators. Model R5010 (left) puts out up to 5kva and Model R3010, 3kva. Provision for remote sensing allows you to hold regulation accuracy **at the load** despite length of output leads, and, with an external transformer, permits regulation of any a-c voltage.



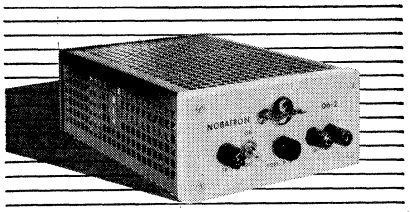
Broadest line of a-c regulators. A complete line of electronic a-c regulating equipment, supplying powers as high as 15kva, is manufactured by Sorensen. Single phase and 3 phase, 50, 60, 400 cps, 115 and 230 vac models are available. Good example of these is the 10kva Model 10000S supply (left). Others: Precision a-c regulators (±0.01%) for labs or meter calibration; and fast-response low-distortion a-c regulators where line transients must be reduced to a minimum.



. . . and rugged, economical MVR's. Low cost, low distortion, long life and a broad selection of models are outstanding features of Sorensen MVR's (Magnetic Voltage Regulators). Capacities range from 30 to 2000 va. Regulation is on the order of ±0.5%. Both harmonic-filtered and unfiltered models are available with 115vac out. Models for 6.3 and 12.6 out, unfiltered, also available.

Sorensen makes a complete line of packaged power equipment—including regulated d-c supplies, inverters, converters and frequency changers. Despite the breadth of the standard Sorensen line, our engineers are always ready to discuss your specialized power requirements up to complete power systems for complex computers or other critical equipment. Write for complete data.

Make sure you have on file the latest catalogues and data sheets on Sorensen's controlled power equipment. Only a few examples from the wide Sorensen line are shown here.



Transistorized regulated d-c supplies. The most complete line of transistorized low-voltage d-c power supplies on the market is offered by Sorensen. 4000 SERIES FREQUENCY CONVERTERS

TIC

Tel-Instrument ELECTRONICS CORP., 728 Garden St., Carlstadt, N. J.

- Unique all-modular construction permits economical conversion to higher power.
- New smaller, lightweight design.
- Power output from 100 to 3000 VA one, two or three phase.
- Output 90 to 130 volts. (Single Phase.)
- No output voltage change with load.
- Frequencies from 50 to 4000 cps.
- 0.00001% frequency accuracy available.
- Designed for resistive or reactive loads, to 0.7 power factor.
- Zero output impedance.
- Low harmonic distortion.
- Zero recovery time.
- Ungrounded output.

TIC's 4000 Series Frequency Converters are assembled with "building block" units to give you flexibility never before possible. Interchangeable modules allow stocking of a wide range of frequency and power outputs in one, two or three-phase units. The new design is remarkably small, as much as one-half the size and one-fourth the weight of other units of equal power. Highly accurate, the 4000 Series is particularly well suited for guided missile checkout systems, magamp testing, servo systems, aircraft instrumentation, other applications requiring variable or fixed frequency power from 50 to 4000 cps.

HI-MEG RESISTORS

GLASS SEAL: HI-MEGS are vacuum sealed in a glass envelope which is treated with a special silicone varnish which keeps the resistor relatively free from the effects of moisture.

RESISTANCE: HI-MEG resistors are available in values from 10^8 to 10^{14} ohms.

TOLERANCE: HI-MEG resistors can be supplied in the following tolerances: 1% below 10^{12} ohms, 2% and 5% below 10^{13} ohms, and 10% over the entire range.

MAXIMUM WORKING VOLTAGE: 1000 volts.

MAXIMUM OPERATING AMBIENT TEMPERATURE: 100° C.

POWER RATING: The power rating for any HI-MEG resistor is equal to one divided by the resistance in megohms.

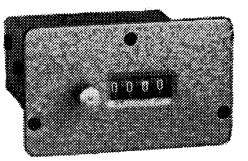
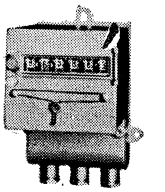
New! F 108 lever or electrical reset, 60 counts per sec., 300,000,000 steps life.



F 160—Bidirectional Counter
To the same life and speed specifications as F 106HD, the F 160 is a bidirectional counter with push button reset. Also available with contacts operating at zero and at any preselectable point up to 9999. By automatically oscillating between these two points, it functions either as a digital controller or batching counter.



VWZelR—Electrical Predetermining
One of two new predetermining electrical counters with push button or electrical reset. Numbers are set into the wheels, counter proceeds to zero, where switch closure is given. Recycling to preset number is electrical or mechanical. Above illustrated model has 9/32″ digits; a small unit for panel mounting with 5/32″ digits is also available.

WELDMATIC PRECISION STORED-ENERGY WELDERS

Speed and simplify precision assembly—join any metal combination reliably and instantly

Through the precise capacitor-discharge principle, Weldmatic equipment makes strong, permanent welds in millisecond time. Since welds are instantaneous, there is no change in dimensions, temper, temperature coefficient, color or metallurgical characteristics of materials. No danger of weak, "cold" or high-resistance joints, either. Weldmatic equipment easily joins dissimilar metals, "problem" metals and parts of varying thicknesses. It cuts production time, reduces rejects, aids miniaturization; it requires no preconditioning of metals, needs no outside materials in making the joint. Welds are usually as strong as the materials they join — and resistant to 2400° F heat and extreme vibration. Equipment is easy to set up and operate, and practically maintenance-free.

THERE'S A RIDER BOOK COVERING EVERY AREA OF ELECTRONICS TO SAVE DESIGN AND ENGINEERING TIME

DESIGN OF TRANSISTORIZED CIRCUITS FOR DIGITAL COMPUTERS *by Abraham Pressman, M.S.* Any circuit design engineer can acquire a firm knowledge of the principles and practices of designing transistorized digital computer circuits from this new, authoritative text. The book is primarily concerned with design of computer building blocks using transistors. Because of the nature of digital computers, "worst casing" is an absolutely essential part of this type of design. Therefore, all design of building blocks analyzed in this book employ "worst case" design calculations and show how to make them. Particular stress has been placed on the most important building blocks . . . "And" gates, "Or" gates, Flip Flops, and interconnecting chains of such blocks.

Covers the major schemes currently employed in designing digital computer logic, including Pyramiding Factors, Turn On, Turn Off, and Storage Time calculations. Circuit analysis and all aspects of output waveforms are calculated treating the transistor as a current switch.

Circuit designers who have no background in transistors are provided with all the necessary transistor fundamentals as well as basic computer circuitry. Also contains a discussion of Boolean Algebra and its applications to the design of optimum switching circuits.

While this book is written from the viewpoint of the circuit designer, the method of analysis is easily followed by engineering students and technicians. **#215, cloth bound.....$9.95**

First Omnibus on the Transistor Art

TRANSISTOR ENGINEERING REFERENCE HANDBOOK *by H. E. Marrows.* Covering transistor performance characteristics, operating specifications, manufacturing processes, applications, testing, sources, etc. Related components—electrical characteristics, physical dimensions, sources, etc.

The most complete handbook for use in engineering, scientific research and manufacturing of transistor devices. **#193, cloth bound, 288pp.....$9.95**

CONDUCTANCE CURVE DESIGN MANUAL *by Keats A. Pullen, Jr., Eng. D.* This manual, a companion volume to Conductance Design of Active Circuits, is the designer's tool complete with tube curves, tables, and explanations for applying the conductance approach to electronic circuit design problems. It will enable designers, engineers, engineering students, and lab technicians to select the proper tubes and their associated components to apply the conductance approach. It has been shown that the non-linear circuit may be linearized on a point-by-point basis if adequate data on the small-signal characteristics of the non-linear devices are available. Based on this knowledge, the author has constructed new curves to enable design using small-signal parameters to predict large-signal circuit performance.

This Manual contains more than 70 conductance curves representing more than 200 different vacuum tube types. Full information is given on the use of the design technique and on the method of constructing additional conductance curves based on manufacturers' data. **#210, 128 pp., 8½x11", spiral stiff cover binding.....$4.25**

CONDUCTANCE DESIGN OF ACTIVE CIRCUITS *by Keats A. Pullen, Jr., Eng. D.* The non-linearity of electron tubes and transistors has for many years greatly complicated the design of active circuits associated with these devices. This book presents a proven method of overcoming these complications.

The conductance approach utilizes a technique whereby a non-linear circuit may be linearized on a point-by-point basis. This definitive book explains and illustrates the theory and mathematics involved in this technique.

It presents the conductance technique as applied to the design of a wide variety of vacuum tube and transistor amplifier, mixer, and oscillator circuitry in the broadest sense. To make the mathematics completely understandable, practical numerical examples are given throughout.
cloth bound, 344 pp.....$9.95

ENCYCLOPEDIA ON CATHODE-RAY OSCILLOSCOPES & THEIR USES (2nd edition) *by John F. Rider & Seymour Usland.* The second edition of the fabulous 'bible' of oscilloscopes has been greatly expanded to include many new types of oscilloscopes and their applications. It is completely up-to-date!

Whatever your field—geophysics, aviation, automotive, medical research, television, audio, computers, automatic control or any other branch of industrial and communication electronics—you'll find the cathode-ray oscilloscope today's basic instrument. The newly revised 2nd edition of this best-selling classic begins with cathode-ray tube construction and theory, then carries you a thorough analysis of modern oscilloscope circuitry, commercial scope types and maintenance, to a detailed treatment of how the scope is operated for all applications.

The 2nd edition includes more than twice as many new scope applications. It covers the latest in special purpose cathode-ray tubes, new data on probes, related information on scope photography. A new section on pulse measurements has been added and also a new illustrated section on square wave testing. The chapter on "Commercial Oscilloscopes and Maintenance" covers the latest commercial types. **#133, cloth bound, approx. 1100 pgs. $21.95**

PHYSICS AND MATHEMATICS IN ELECTRICAL COMMUNICATION *by James Owen Perinne, Ph.D.* This is a fascinating explanation of what happens in electrical circuits that contain resistance, inductance and capacitance. The text contains numerous explanatory diagrams, many conceived by the author, that point out and simplify concepts that normally are considered complicated. On a foundation of associated mathematics made completely understandable and replete with numerical examples, the author brilliantly ties together physical concepts and electrical communication. An entirely new approach is used in analyzing hyperbolic functions, exponential equations and related functions. **#219, 8½x 11", cloth bound.....$7.50**

MUST READING FOR ENGINEERS AND ENGINEERING STUDENTS

FUNDAMENTALS OF TRANSISTORS (2nd edition) *by Leonard M. Krugman, P.E.* Published in 1954, the first edition of this book gained an international reputation as an outstanding text devoted to the fundamentals of transistors—their characteristics, performance and application. One of its main features was the lucid presentation of the theory of semi-conductors. This, the second edition, (revised and expanded), modernizes the text so as to embrace the latest developments in the transistor art and so bring the book completely up-to-the minute. The numerical examples contained in this book make every equation both understandable and usable. It is an ideal introduction into semi-conductors for the engineer, engineering student and scientist confronted with these exciting devices for the first time. **#160.....$3.50**

AMPEX CORPORATION

AMPEX MAGNETIC TAPE RECORDERS

...the standard for instrumentation and control

DATA ACQUISITION AND STORAGE
DATA ANALYSIS AND REDUCTION
MACHINE AND PROCESS PROGRAMMING
DYNAMIC SIMULATION

Whatever your magnetic tape instrumentation requirements are, eventually your comparison must be with Ampex.

Is there another machine more precise and versatile than the Ampex FR-100A? Can you find any other high-accuracy instrumentation recorder more adaptable and economical than the Ampex FR-1100? Does another company offer better field service engineering than the nationwide system of Ampex District Offices and Resident Field Engineers?

Because Ampex is devoted exclusively to the development, manufacture and application of magnetic tape recording equipment you'll find at Ampex the widest choice, superior performance and assured compatibility, made possible by precision engineering to the closest tolerances and rigid quality control in production-line manufacture.

Three analog recorder/reproducers

The Ampex FR-100A is the best recorder for critical data in such typical applications as telemetry, dynamic simulation tests and continuous-path machine-tool control.

A simple open-loop tape mechanism on the Ampex FR-1100 and the accessibility of components for replacement or service make this model well suited for general-purpose laboratory use in spectrum analysis, vibration testing and comparable applications. Multi-range versions offer very wide speed ratios for time-base expansion.

Cyclic repetition for analysis, continuous time delay, and endless calamity-anticipation monitoring are three capabilities of the FL-100 loop recorder. Various speed and loop-length options permit cycling times from 0.733 seconds to 8 minutes.

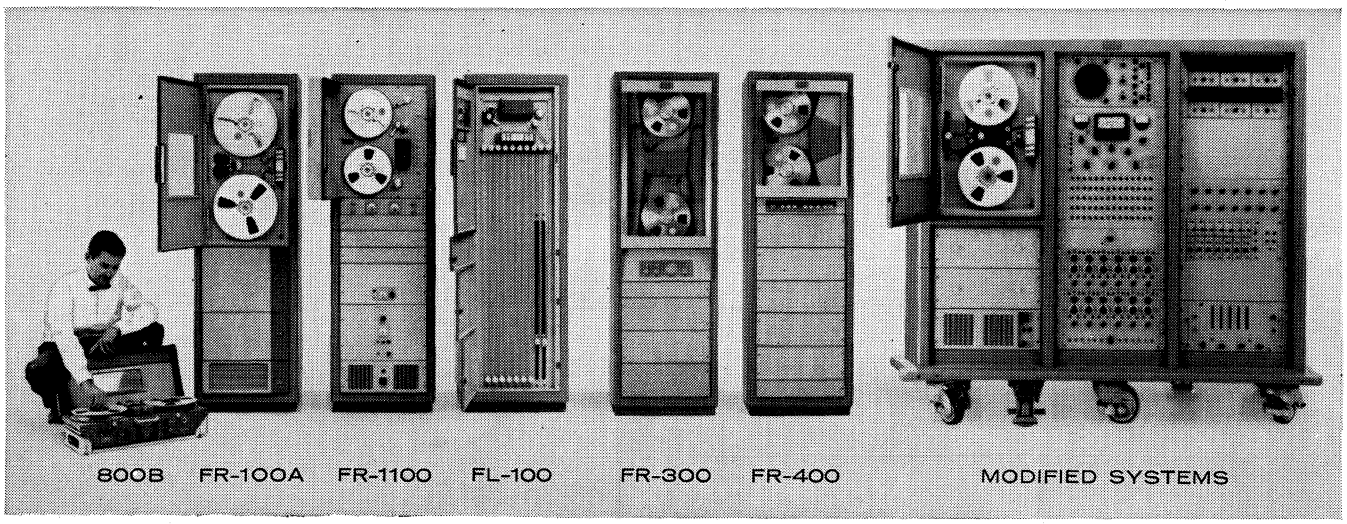
All three of these recorders feature Ampex modular construction, use the same plug-in amplifiers (for Direct, FM-Carrier, PDM and NRZ-digital techniques), and fit one or more 19-inch rack cabinets.

Ampex Digital Tape Systems

With read/write transfer rates as high as 90,000 alpha-numeric characters per second, the FR-300 high-speed (150 ips) digital is the first to match most of the big computers in speed and reliability of bit reproduction. Start/stop times of 1.5 milliseconds greatly reduce buffer requirements.

For lesser computers and auxiliary digital equipment like converters, printers, etc., the FR-400 and FR-200A provide a wide range of transfer rates. Many high-performance components of the nimbler FR-300 are used in the FR-400, making it a very heavy-duty tape handler with tape speeds up to 75 ips.

Ampex furnishes complete digital tape systems, including tape handler, magnetic heads, amplifiers and special Ampex tapes. Handlers fit 19-inch rack cabinets.



See YELLOW SECTION for Local Offices, Telephone, etc.

Rugged mobile and airborne recorders

Within the compact packaging of the Ampex 800B are almost all the recording capabilities of the laboratory models. The world's most widely used mobile instrumentation recorder for air and ground use, it resists shock, vibration, temperature and high-altitude pressure extremes. Cable-connected assemblies fit small available spaces.

Three other mobile recorders are examples of special Ampex design work for particular military and industrial needs: the tiny (1/5 cu. ft.) MR-100, a missile-riding recorder that withstands up to 75g shocks; the AR-100, a 23-lb. two-track airborne recorder meeting essential requirements of MIL-E-5400 on temperature, vibration, shock and high-altitude conditions; and the UNQ-7 shipboard recorder/reproducer with two speeds and two tracks on 7-inch reels of quarter-inch tape.

Modified Recorders and Special Systems

The jet-engine test dolly shown below typifies Ampex experience in modification engineering. Mounted with an FR-100 recorder are preamplifiers, monitoring scopes and calibration equipment for rolling or trucking anywhere in a widespread facility. For your particular needs many Ampex models can be furnished with special tape speeds, larger reel sizes, front access mounting, system buildups, etc.

Writing or calling an Ampex data specialist will give you access to *the greatest total experience in magnetic tape instrumentation.*

SILICON RECTIFIERS

AUDIO DEVICES, INC.

Audio Devices has available a complete line of Silicon Rectifiers having DC current ratings from .5 to 200 amperes with the peak inverse voltage ranging from 100 to 400 volts (500v in the A,B series). Audio's rectifiers in the A and F series have great versatility due to the threaded-end construction which allows them to be either plugged into a fuse-type holder or screwed down in a heat sink mounting for higher current ratings. The threading also makes it possible to couple the rectifiers together in series for high voltage applications. All units of this universal line of Silicon Rectifiers are hermetically sealed and offer all-metal construction for greater efficiency, reliability and long life.

THE POWER TWINS
(high current types)

Audio Devices' *Power* Silicon Rectifiers are available with either positive or negative base connections. These "opposite polarity" units have the same operating characteristics and mechanical dimensions. They are distinguishable by case color, model number and Jetec number. Through the use of opposite polarity units bridge circuits can be assembled with greater ease and simplicity.

CONANT MINIATURE METALLIC RECTIFIERS

All Conant rectifiers are manufactured to the highest quality standards from individually tested and graded cells. Copper oxide cells are produced by the exclusive Conant Process and have 24K gold contacts applied in high vacuum.

The Conant Complete Color Code permits identification of rectifier type by color and physical form.

Only basic standard rectifier types are listed below. Many other standard catalog items are available and we are prepared to produce special items to meet customers' special requirements.

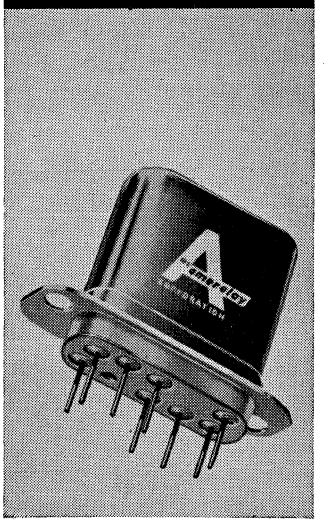
THE amerelay CORPORATION



*Patent Pending

micro-miniature crystal-case relay*

featuring a new concept for added reliability

Although the external appearance of the Amerelay micro-miniature relay is similar to others, its design — coupled with AMERELAY's manufacturing technique — assures an extremely high degree of reliability and uniform performance. It is of the size and shape that conforms with present industry standards as well as with MIL-R-25018 (USAF) and MIL-R-5757C.

FEATURES:

- Operating coils are contained in a separate hermetically sealed enclosure, thereby eliminating contact contamination from volatile coil materials as found in other relays.
- Return springs for armature have been eliminated to permit all the power developed in the magnetic circuit to be employed in operating the contacts, thereby providing higher contact pressure.
- A short pivot support is used for the armature to provide a rugged mounting not subject to vibration damage.
- Teflon® bobbins are used exclusively in coil construction to offer highest insulation resistance even at high ambient temperatures.
- Contact material used by Amerelay permits use of the same relay for both 2 ampere 26.5 VDC resistive load service, as well as for low level or "dry circuit" operation.
- Relays can be furnished with hooked wire terminals for soldering circuit wiring directly to terminals; with straight terminals suitable for plug-in applications; or with three-inch wire leads.

 **SPECIAL PURPOSE**—We can usually make assemblies of Automatic Electric relays with modifications to suit your special applications. The Class E Video relay, illustrated here, is an example. Others are designed for power applications, electro-mechanical interlocking, marginal operation, mechanical locking, micrometer adjusting, and the simultaneous closing of up to 35 circuits (BAR relay).			

AE STEPPING SWITCHES

FAST STEPPING, SMOOTH RUNNING, POSITIVE STEPPING

TYPE 44

The Type 44 is a small switch with a large, flexible capacity. Use this switch in almost any d.c. application—for impulse controlled response or self-interrupted operation. Though it's only slightly larger than a pack of king-size cigarettes, the Type 44 rotary stepping switch accommodates up to six 10-point bank levels.

TYPE 45

In every feature of its design, the Type 45 rotary stepping switch provides for adaptation to varied requirements, including a.c. operation. The one-piece, open-type flat frame occupies only one side of this switch, so the 25-point contact banks can be built up level by level as needed, up to twelve.

SERIES OCS RELAY

Here's a shock-resistant relay which can be used for cam-switching...for alternate on-off operations...or as a "stepper." When you order Automatic Electric's OCS relay, you specify the programming. This compact unit simplifies engineering and wiring—cuts space, weight and maintenance costs.

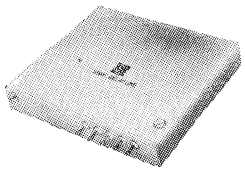
ULTRASONIC DELAY LINE



Small, light weight, hermetically sealed ultrasonic delay lines with delays from 5 to 6000 microseconds are available. The units operate over the ambient temperature range of −55° to +100°C with a temperature coefficient of delay less than 20 parts per million per degree centigrade. A ratio of delay to pulse rise time up to 800:1 is obtainable with a storage capacity of up to 2000 bits. Input and output impedances range from 50 to 2000 ohms with carrier or pulse frequencies up to one megacycle. An adjustment of ±3 microseconds is supplied on standard units. Taps are available with and without the adjustment feature. The units will withstand vibration to 500 cps at 15 g. and shock to 50 g.

Bulletin UD-19 and technical data SUD-19 are available upon request.

For—Missile, Aircraft, Computors, and Navigational Devices—Flight Controls—Automation Feeds for Machine Tools and Controls for positioning and synchronization of aerial cameras, actuator for automatic pilots, controls for food processing machinery.

The Curtiss-Wright DM series digital motors are designed to withstand severe enrivonment requirements and are operable under high shock and vibration. They operate on the electro-magnetic principle, converting electrical pulses to stepping motion on the output shaft. In its function the digital motor indexes and locks positively, so that external forces cannot affect the position of the shaft. The motor is bi-directional and combines the best features of both the escapement and ratchet type movements. Since the design does not require the use of a spring loaded detent mechanism, the power requirement is low.

VOLTAGE: Standard voltage 28 volts D-C. Other voltages available upon request.

LIFE: In excess of five million operations in each direction at rated load.

TEMPERATURE: −65° F. to +165° F.

RELIABILITY: The unit does not fail to convert more than one pulse in 1,000,000 into equivalent angular' rotation.

VIBRATION: 20 G's to 500 CPS.

SHOCK: 30 G's for 11 milliseconds along each axis.

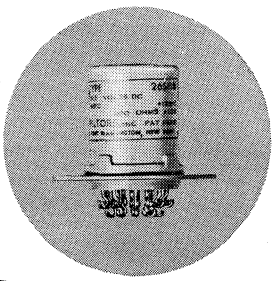
GENERAL PURPOSE

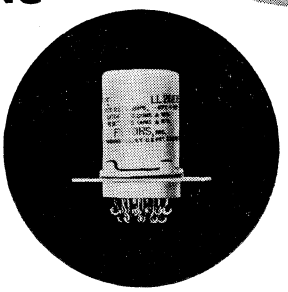
precision manufactured under rigid quality control. Offers lightweight, rugged, compact construction for high environmental conditions. Applicable to instrument, geophysical, aircraft controls and many other circuits where high reliability and multiple switching are required. Available in 2 DPDT, 4 DPDT and 6 DPDT.

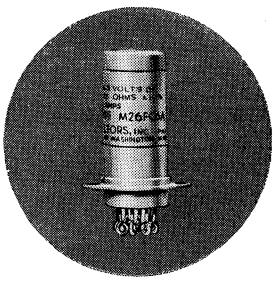


LATCHING

relay remains in "energized" position indefinitely without consuming power. As an overload relay it can be electrically reset from a remote position. Contacts can be closed by one circuit and opened by another. It has many applications in fail-safe circuits. Its small size, light weight and hermetically sealed enclosure make possible its use in airborne and other equipment. Either coil may be energized continuously without damage to the relay.

It affords the designer great latitude in circuitry, particularly in "lock-up" circuits, e.g., where the contacts of one conventional relay are used to lock-up the coil of another relay. Thus it avoids redundancy. Available in 2 DPDT, 4 DPDT and 6 DPDT.





5/8 INCH STYLE

A rugged 2 pole double throw relay of small size and weight designed for high reliability under extreme conditions. Available with either 2 amp or dry circuit contacts.

TIME DELAY RELAYS

Time delay relays produced by the E. V. NAYBOR LABORATORIES are of two basic types.

A pneumatic type is offered which provides delay periods, upon release of coil power, up to ten seconds. Operation is immediate and delay is completely independent of line voltage. The use of snap-action switches in conjunction with an air dashpot, results in a device which resists shock and vibration, to a high degree. An AC version is available (in all but three pole, double throw models) for operation to 115 volts — 50 to 400 cycles.

A "slugged" type of time delay relay is also offered. Delay periods are offered to 200 milliseconds, upon release of coil power. This unit is very compact for its switching power and delay period attained. A copper slug, or very low resistance circuit, is used around the polepiece to obtain a retardation of magnetic flux, and thus provide a delay period.

TD SERIES

2⅝Hx1⅝ x1⅝

The TD Series time delay relay, uses the air dashpot principle to provide delay. This unit provides 5 amp. switching capacity, up to three pole double throw. Available in open version, and hermetically sealed (suffix H), which provides resistance to extreme ambient conditions and operation at altitudes to 70,000 feet.

SPECIFICATIONS

CONTACT ARRANGEMENT—Single pole—double throw, double pole—double throw and three pole—double throw (except for AC operation).

DELAY AVAILABLE—Standard range—to 2 seconds for 3 pole—to 4 seconds for 2 pole—and to 6 seconds for single pole units. Recycle time less than .025 seconds.

CONTACTS—Rated at 5 amperes resistive load at 125 or 250 VAC for 100,000 operations. Rated at 4 amperes resistive load at 30 VDC for 50,000 operations.

COIL—Standard coil resistance for 26.5 VDC operation 300 ±10% ohms. Other values available to 12,000 ohms. Coil operation from .5 watt to 3 watts depending upon operating conditions.

TEMPERATURE RANGE—Standard at —55 degrees C. to +85 degrees C.

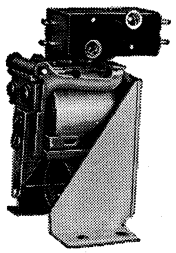
TD310 SERIES



2⅝Hx1⅝x2

Providing the same general characteristics as the TD Series, the TD310 series offers a 10 amp., single pole, double throw switching capacity and high life. When operated at pilot load, 1 ampere, a life of over 10,000,000 operations can be expected. The TD310 is the open version. The TD310H is the hermetically sealed version, with altitude rating to 70,000 feet.

SPECIFICATIONS

CONTACT ARRANGEMENT—Single pole—double throw, double break.

DELAY AVAILABLE—Standard range—to 10 seconds. Recycle time less than .025 sec.

CONTACTS—Rated at 10 amperes resistive load at 125 or 250 VAC, or 10 amperes inductive load at 30 VDC. Probable life at 10 amperes 30 VDC., L/R=.01, 200,000 operations. Probable life at 10 amperes 125 VAC, 75% P.F., 750,000 operations.

COIL—Standard coil resistance for 26.5 VDC operation, 300 ±10% ohms. Other values available to 12,000 ohms. Coil operation from .5 watt to 3 watts depending upon operation conditions.

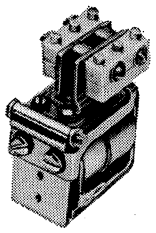
WEIGHT—4.25 ounces.

ACCURACY—Above 1.0 second ±20%. Below 1.0 second ±40%.

TDS SERIES



1¾Hx1⅜x1⅛

The TDS series time delay relay uses a copper slug to provide a delay period. Contact rating is 5 amp. in single or double pole, double throw. Available in both open and hermetically sealed (suffix H) versions. Hermetically sealed units provide operation to 70,000 feet.

SPECIFICATIONS

CONTACT ARRANGEMENT—Single pole—double throw (TDS3H), and double pole—double throw (TDS6H).

DELAY AVAILABLE—Standard range to 100 milliseconds. Under certain conditions to 200 milliseconds.

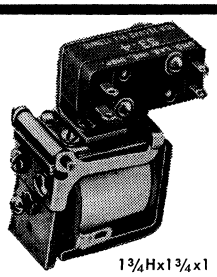
2⅛Hx1⅝x1

WEIGHT—5 ounces.

DIELECTRIC—Test at 1,000 volts RMS.

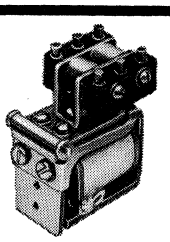
POWER RELAYS



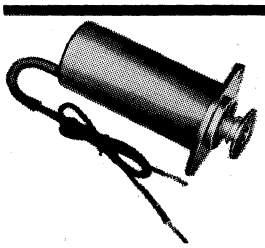
1¾Hx1¾x1

The Type R310 power relay is a unit with high switching capacity for relatively small coil power. Rated at 10 amperes, this unit is the relay and switch assembly of the TD310 series time delay relay and follows the characteristics of the TD310, except for delay available and weight. A hermetically sealed relay, Type R310H, is available. Its physical dimensions are identical to the TD310H, except for a height reduction of ¾ inch.

The Types R3, R6 and R9, have 5 amp. switching capacity and are respectively, single, double and triple pole, double throw relays. These relays are available hermetically sealed (suffix H), with physical dimensions identical to the TD series hermetically sealed units, except for a height reduction of ¾ inch.



1¾Hx1⅜x1⅛



SPECIAL SOLENOIDS

Special solenoids, flag indicators and other magnetic devices, are also manufactured by the E. V. NAYBOR LABORATORIES. The numerous variations and special nature of these devices, do not permit cataloging, however, we welcome your inquiries on all of your electro-magnetic requirements.

① **TIMING ACCURACIES** shown are in percent of nominal time delay, and are guaranteed under any combination of rated voltage variations, temperatures, vibration, shock and acceleration. **Special order types are available with accuracies better than 3%.**

② **CONTACT RATINGS** shown are for resistive loads at 28 vdc or 115 v 400 cps. For inductive loads (with L/R ratio of .025 max) the contact rating is one-half of resistive rating shown.

CONTACT LIFE is 100,000 cycles minimum at rated loads.

CONTACT RESISTANCE is 50 milliohms maximum initially, 100 milliohms maximum after rated life.

③ **TIME DELAY** selected by customer is pre-set at factory and is not adjustable in the field. Special types are available with provision for external potentiometer adjustment of delay period. Special types are also available with time delay periods longer than 300 seconds.

TIMING ACTION is delay on pull-in. Special types are available with delay on drop-out.

DROP-OUT TIME is 10 milliseconds maximum for 2 amp types, 20 milliseconds maximum for 10 amp types.

④ **RECYCLING CHARACTERISTICS.** Under normal operating conditions, these units may be recycled by interrupting the input voltage after pull-in for a minimum period of 10 milliseconds. Detailed information is available for various types describing their recycle characteristics under other modes of operation.

⑤ **INPUT VOLTAGE** is 28 vdc nominal (18 to 31 vdc). Special types are available for 60 cps and 400 cps input voltages.

CURRENT DRAIN before pull-in is 9.3 milliamps ±15% for all types. Current drain after pull-in varies with relay type—
For 2PDT, 67.5 ma ±15%
For 1PDT, 86.0 ma ±15%
For 3PDT, 132 ma ±15%
(measured at 25 deg. C. 28 vdc)

⑥ **VIBRATION RATING** is 10 to 80 cps at .06 inch peak double amplitude, 80 to 2,000 cps at 20 g's.

SHOCK RATING is 50 g's, 11 milliseconds.

ACCELERATION RATING is 20 g's, steady state, any axis.

⑦ **MIL SPECIFICATIONS.** All types listed will meet or exceed all applicable requirements of MIL-E-005272B, MIL-E-5400B, MIL-R-5757C, MIL-R-6106C, MIL-R-25018.

NOTE: Above specifications supercede Tempo Tech Data 1357 and Engineering Bulletin 0558

ORDERING INFORMATION

Basic type number (T5000, T4001, T1000, etc.) defines temperature range, contacts and rating, and accuracy. For a complete ordering part number, customer must specify mounting style, terminals and exact time delay period required. A complete part number is determined as follows:

TXXXX X X XXXX

TYPE	MOUNTING STYLE (see tabulation)	TERMINALS "P"—plug-in "S"—solder hooks	TIME DELAY—First 3 digits are significant figures in milliseconds. Last digit is number of zeros following first three.

EXAMPLES:

T5030RS9502 is a 125°C unit, 3PDT-10 amp relay, 10% accuracy, mounting style "R", solder hook terminals, with a time delay of 95,000 milliseconds (95 sec.).

T1005AP0700 is a 70°C unit, 2PDT-2 amp relay, 3% accuracy, mounting style "A", plug-in terminals, with a time delay of 70 milliseconds (.070 sec.).

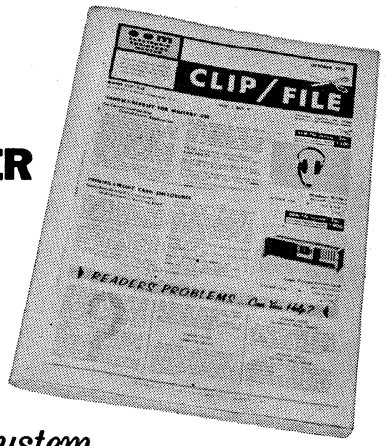
WORKING TOGETHER TO GIVE YOU COMPLETE PRODUCT INFORMATION



... and a self-indexing filing system

Here's How It Works . . .

It all starts with the annual *eem*-Electronic Engineers Master. *eem* categorizes the electronic industry into 51 major product groups. Numerically they run from Section 1100 through 6000 and appear at the top of each *eem* catalog page. These same section numbers are used as the index for your personal filing system.

Monthly, you'll receive *CLIP/FILE*, the new product newspaper. Each *CLIP/FILE* new product item includes an *eem* file system number. You simply clip each release along the perforated line, and file it in its appropriate folder.

Each time you refer to *eem* and wish to check for additional information, merely look for the section number at the top of the *eem* page and select the corresponding file folder. There, at your fingertips, is the necessary data to bring you up-to-the-minute.

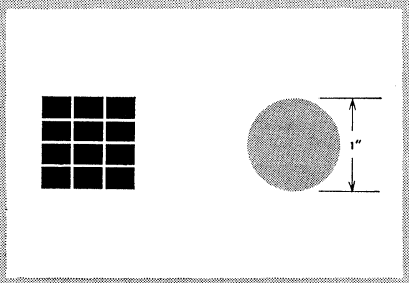
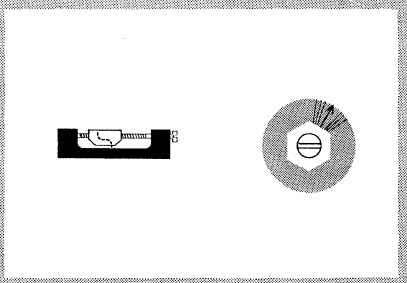
OFFERS THIS MUCH IN MINIATURE POTENTIOMETERS

...and to solve these 3 basic problems



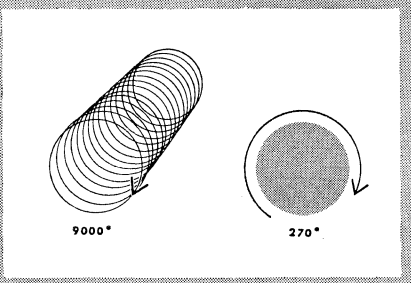
PROBLEM 1—TIGHT SPACE

Bourns potentiometers are rectangular and most are so small you can pack from 12 to 17 into a one-square-inch panel space. They fit into corners, between other components, flat against a chassis or printed circuit—even in stacked assemblies.



PROBLEM 2—ADJUSTMENT STABILITY

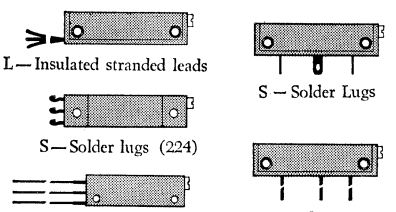
Bourns potentiometers are virtually immune to shock or vibration—screw-type shaft locks at any position, without use of lock nuts. Circuit adjustments made at your factory remain stable in the field.



PROBLEM 3—SETTING ACCURACY

Bourns potentiometers are 33 times as accurate as conventional single-turn rotary types. Repeat settings, circuit balancing, calibration—adjustments of all types are easier, faster, more precise.

① Key to terminal types.



② Standard resistances (ohms)

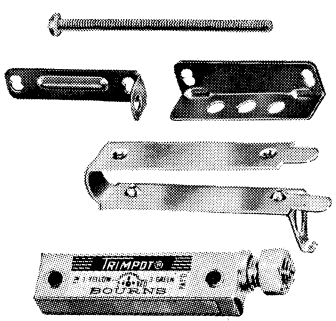
10	200	5K	100K
20	500	10K	200K
50	1K	20K	500K
100	2K	50K	1 meg

Units are available in these resistances within resistance limits shown in chart. Other resistances available on special order.

③ or 0 to 0.5 ohms, whichever is greater.

④ or 0 to 1.0 ohms, whichever is greater.

⑤ All models listed except commercial potentiometers are sealed against sand and dust and are splash-proof.



Mounting screws, mounting brackets, and clip brackets for panel mounting are available from factory or local distributor stock to adapt Bourns potentiometers to virtually any mounting situation.

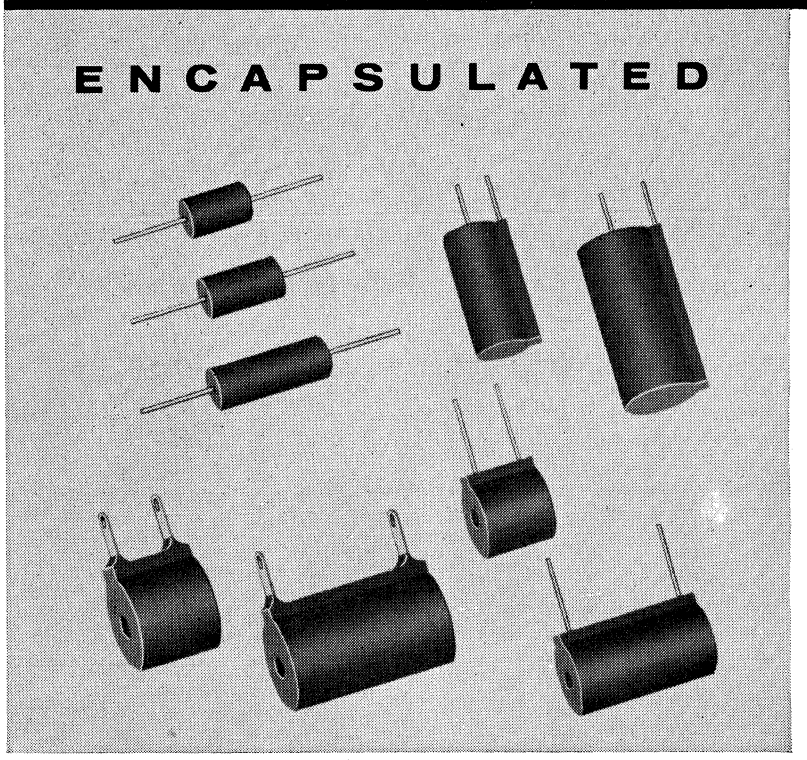
PRECISION, WIRE-WOUND RESISTORS

ENCAPSULATED



Military and Industrial Types: CE200 and CE400 Series in Cinema's Encapsulated Resistors represent the ultimate in wire-wound resistors exceeding MIL-R-93 and MIL-R-9444 Specifications. Continuous quality control assures resistor capabilities meeting long term applications, rigid environmental tests and specific ratios of resistance and voltage. Accuracies of 1% to .05%. Resistance range from .1 ohm to several megohms. Catalog 14R is available, or send us your specifications.

Ceramic Bobbin Types: Widely used in industrial applications, the Cinema CE500 is consistently the answer to high quality for commercial and industrial laboratories. These resistors meet the economic standards of commercial applications while relaxing only in a few of the most abusive military requirements. Accuracies to .025%. Resistance range from .1 ohm to several megohms. Catalog 14R is available, or send us your specifications.

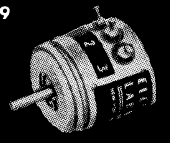
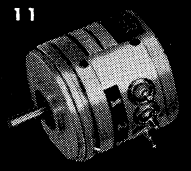
POTENTIOMETERS — DIGITOMETERS

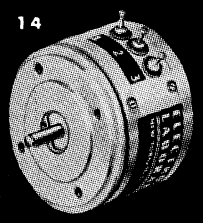
POTENTIOMETER
TYPE 9



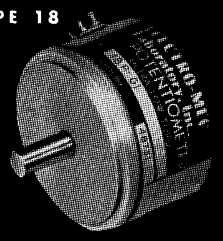
TYPE 11



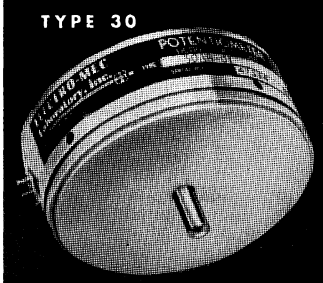
TYPE 14



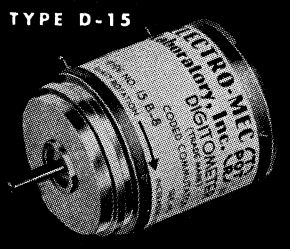
TYPE 18



TYPE 30



DIGITOMETER
TYPE D-15



ULTRA-LOW TORQUE

Ball bearings or, in some cases, jewel bearings combined with carefully controlled brush pressure provide lowest operating torque. Standard non-critical torque is equal to the Type Number times .01 (i.e. Type 11 $\times .01 = .11$ oz. in.). Torques down to 25% of this computed value are available.

EXTREME ACCURACY

The ultimate in mechanical precision plus the most rigid control of all procedures winding and assembly provide the ultimate in accuracy. Resolution as small as .015% is available.

DIGITOMETER: an anolog to digital converter of the most advanced design for airborne computers.

PRECISION

Close mechanical tolerances, an all metal housing, and the best available ball bearings (ABEC Class 5 or 7) make these instruments compatible with the finest Servo components.

ACCURATE LINEARITY

Meticulous care in the selection of resistance wire and the application of the most advanced winding techniques maintained with merciless inspection procedures assure accurate characteristics to meet the most exacting specifications. Each instrument receives a preliminary linearity test prior to final assembly and with shipment a linearity recording accompanies each Potentiometer. The accuracy of the linearity test equipment is maintained at .01%.

RELIABILITY

Imaginative design, sound engineering and rigid control of all materials and processes contribute to an extraordinary measure of reliability. The internal electrical connections are welded; slip rings of 18 carat gold, and the terminal insulation of glass assure an extra degree of stability and long trouble-free life. A point inspection of all mechanical and electrical characteristics is made of each instrument prior to shipment.

RUGGEDNESS

Electro-Mec Potentiometers have been used for almost a decade aboard combat aircraft of every type. Repeated environmental tests substantiate the ruggedest characteristics of these instruments and their ability to maintain the inherently precise output functions under severe ambient conditions.

Our engineers are daily solving design problems by adopting standard Potentiometers to meet particular requirements. For further information send details of your application to our Engineering Department so that we can recommend the best solution to your problem. A compromise is undesirable and never necessary. Data sheets covering each instrument are available upon request.

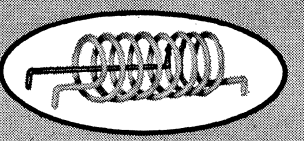
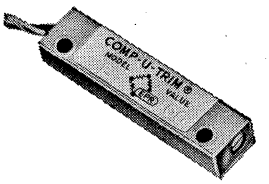
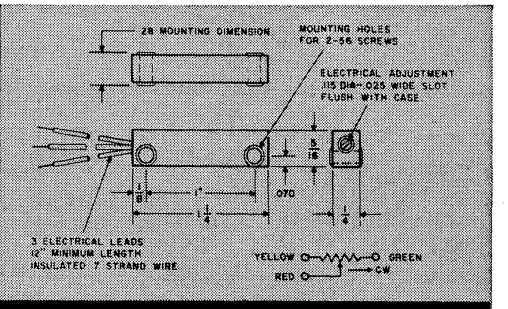
COMP-U-TRIM®



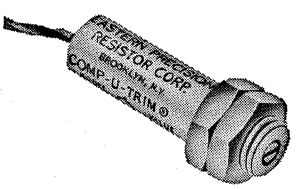
A COMPLETE LINE OF ENCAPSULATED WIRE WOUND TRIMMING POTENTIOMETERS

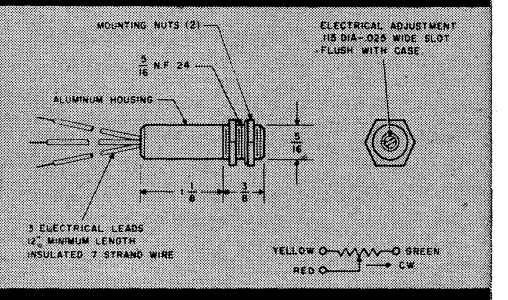
Comp-U-Trim® Model "E" is totally encapsulated within a metal housing to afford maximum protection against environmentals and vibration. Designed to be mounted singularly or stacked, this rugged model is available in resistance values from 10 ohms to 50,000 ohms with 0% end resistance.
Rated at 1.0 watt with ambients up to 125°C, Comp-U-Trims® are wound on dimensional and heat stable steatite.



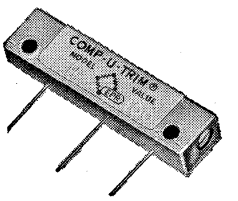


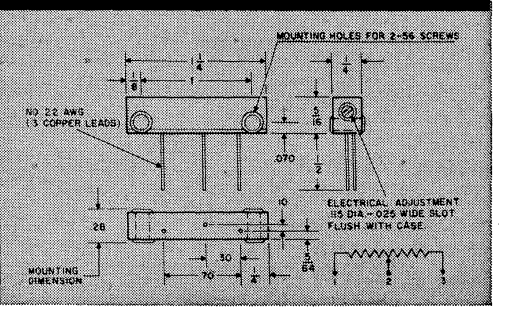
Comp-U-Trim® Model "F" was specifically designed for panel or below chassis mounting. It requires less mounting area than any other comparable unit. Model "F" has all the unique advantages of Model "E" including the radically new internally positioned wiper contact that makes possible a resistance element 250% greater in area than other types of trimming potentiometers.





Comp-U-Trim® Model "H" is ideally suited for printed circuit applications. Epoxy plastic rigidly supports the printed circuit pins and prevents the entrance of moisture.
Internal connections are so positioned that solder dip baths are not deleterious if standard precautionary methods used throughout the industry are observed. Model "H" is equal in all other respects to Model "E".





FEATURES

- One-piece metal housing.
- 0% end resistance.
- Totally encapsulated — not coated.
- Internally positioned wiper contact.
- Self-locating recessed adjustment screw-head.
- Positive end stops make obsolete the "free wheeling" methods.
- Temperature and voltage cycled for maximum stability.
- 250% greater winding area on dimensionally stable form gives increased reliability.

NOTE: L-Pads can be supplied with or without plate and knob. All units are supplied with mounting hardware.

FEDTRO L-Pad, Level, Brilliance, and Balance controls afford an efficient method of providing and controlling the audio level of low impedance circuits. A constant impedance is provided to the source assuring no circuitry unbalancing. The impedance of the output varies with the setting of the control knob.

The precision wire-wound resistance elements are concentrically mounted and housed in a single moulded base, securely sealed with a metal cover. This unique superior design provides a much shallower unit than conventional double-potentiometer types which require far more physical space.

The FEDTRO STEREO L-PADS and STEREO BALANCE CONTROLS are dual units with two L-Pads (four wire-wound resistance elements) mounted on the same shaft. They permit an extremely simple, efficient and inexpensive method of providing a CONCENTRIC STEREO BALANCE CONTROL. Thus, with single knob control, the speaker system of one stereo channel can be increased while the other speaker system is lowered. The Fedtro Stereo L-pads may also be used in a conventional manner in a Stereo system as level controls, etc.

AVAILABILITY FROM STOCK. QUANTITY QUOTATIONS UPON REQUEST.

KNOB AND PLATE: Of magnificent, elegant design and appearance, the matching knob and plate are finished in a brilliant gold and black motif. The satin finished plate is calibrated with inlaid black numbers from 0 to 10 (size: 2 9/16" x 2 9/16"). Knob is of rich gold inlay with black trim (O.D. 1 1/4"). Supplied with recessed screw.

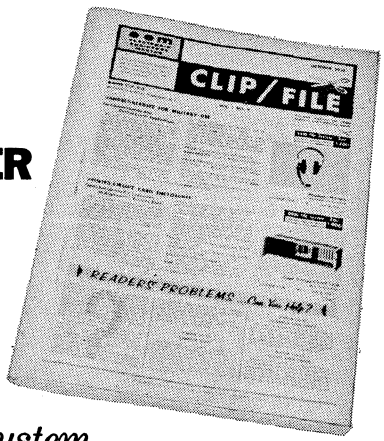
WORKING TOGETHER TO GIVE YOU COMPLETE PRODUCT INFORMATION



... and a self-indexing filing system

Here's How It Works . . .

It all starts with the annual *eem*-Electronic Engineers Master. *eem* categorizes the electronic industry into 51 major product groups. Numerically they run from Section 1100 through 6000 and appear at the top of each *eem* catalog page. These same section numbers are used as the index for your personal filing system.

Monthly, you'll receive *CLIP/FILE*, the new product newspaper. Each *CLIP/FILE* new product item includes an *eem* file system number. You simply clip each release along the perforated line, and file it in its appropriate folder.

Each time you refer to *eem* and wish to check for additional information, merely look for the section number at the top of the *eem* page and select the corresponding file folder. There, at your fingertips, is the necessary data to bring you up-to-the-minute.

GENERAL ELECTRIC THERMISTORS, THYRITE® VARISTORS, PERMANENT MAGNETS

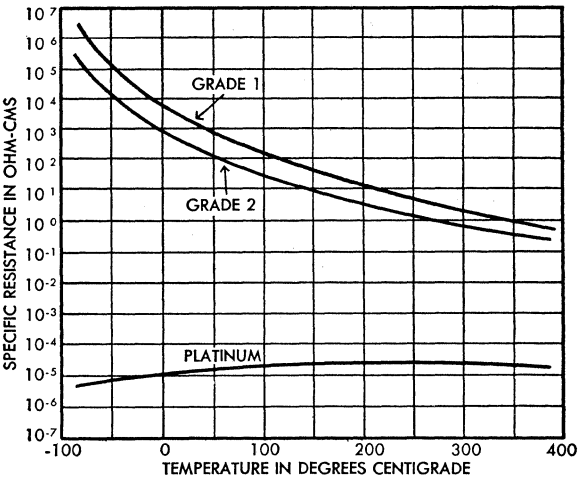
THERMISTORS

Semi-conductors used to detect, measure, and compensate for minute changes in temperatures

G-E thermistors are *thermal*-sensitive semi-conductors with large *negative* temperature coefficients of resistance. As circuit elements they provide highly sensitive response to relatively minute temperature changes.

In addition to temperature measurement and control, G-E thermistors suppress inrush current surges, trip time delay devices, regulate voltage . . . replace far more complex devices.

G-E thermistors can be supplied with resistance values from 1 to 10,000,000 ohms and temperature coefficients of resistance from −1% to −5% at 25°C. They are made as discs, washers, rods and beads in a wide variety of thermistor materials in sizes from 0.05" up to 3".



Temperature resistance values of 2 General Electric thermistor grades compared to a representative metal.

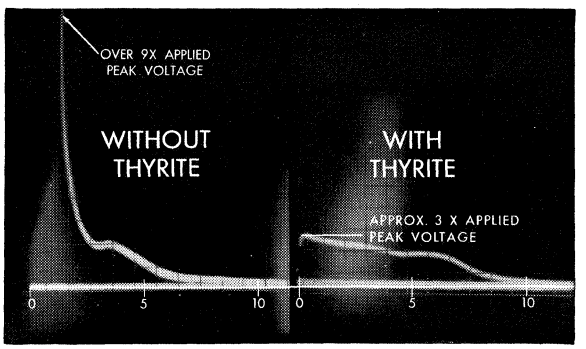
THYRITE® VARISTORS

Non-linear resistance material provides current that varies as a power of the applied voltage

Thyrite varistors are *voltage*-sensitive semi-conductors in which I varies as E^n. Resistance is stable and substantially independent of polarity and frequency. Thyrite varistors limit voltage surges and stabilize current supplied by rectifiers.

You can also use Thyrite to control voltage-sensitive circuits, as a nonlinear resistance parameter, or as a potentiometer.

G-E Thyrite varistors are made with a wide variety of volt-ampere characteristics for components rated from 6 to 4,000 volts. Thyrite is available in rods, discs, or washers with or without leads and as assemblies ready for installation.



Oscillograms (above) show how a Thyrite varistor controls surge over-voltage. With a varistor introduced into the circuit, surge voltage is reduced from 9 to 3 times the applied peak voltage.

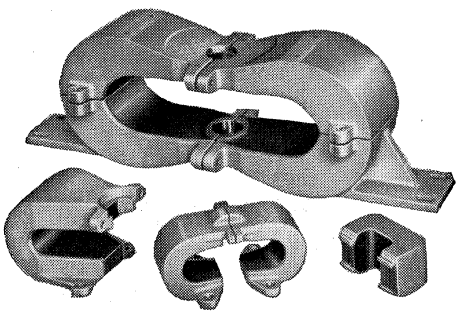
ALNICO PERMANENT MAGNETS

Designed for increased efficiency for a wide range of industrial applications

G-E magnets can be made in almost any shape or size. Where these magnets are to be used in magnetic assemblies, G-E die-cast aluminum sheaths can often simplify the assembly design and fabrication.

Cast permanent magnets are made by General Electric in all seven Alnico grades. G-E sintered magnets are available in Alnico 2, 4, 5 and 7. Sintered magnets have more uniform flux distribution, superior tensile strength, and can be formed into complex shapes.

G-E directional grain Alnico 5 has an energy level 0.5 to 0.75 gauss-oersteds higher than unoriented Alnico 5. G-E P-series alloys now provide magnetic materials with *consistently uniform flux* for hysteresis motors.



G-E cast aluminum sheaths (above) can be turned out in a fraction of the time needed to build assemblies in your own plant.

Thermistors and Thyrite varistors can be supplied in a variety of experimental kits. Write for descriptions and prices.

If you would like more technical information on thermistors, Thyrite varistors, or permanent magnets — or the assistance of a G-E engineer — write: *Magnetic Materials Section, General Electric Company, 7794 N. Neff Road, Edmore, Michigan.*

SUBMINIATURE

PRECISION WIRE WOUND RESISTORS

Type TX (precision)—Type SX (power)...

...made to Fit Your Circuit Design

The use of Sub-Miniature PRECISION Type TX and Type SX Wire Wound Resistors permit you to fit the exact resistor you want to *your* design. No longer is it necessary to accommodate your plan to the resistor.

Both Type TX and SX Resistors come in the widest range of physical sizes and resistance values . . . from 3/32″ in diameter and 3/16″ long and resistance coverages from 0.01 ohm through 1 megohm. According to your need, PRECISION Resistors may be had in larger or smaller diameters and longer or shorter lengths, yet to the resistance value you specify. Terminals may be either axial or radial.

PRECISION Type TX and SX Resistors provide the highest degree of RELIABILITY . . . and at a low, low cost.

PRECISION'S unique winding method prevents the enormous pressures and mechanical stresses found in conventional resistors. Dangerous "cross-overs" and insulation breakdowns are also eliminated.

Type TX and SX Resistors are available inductively or non-inductively wound . . . Type TX in tolerances from ± 1% to ± 1/20% — and, where extreme accuracies are required, to tolerances to ± 1/100% — Type SX in tolerances to ± 1/10%.

Military requirements are to PRECISION specifications.

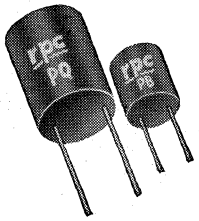
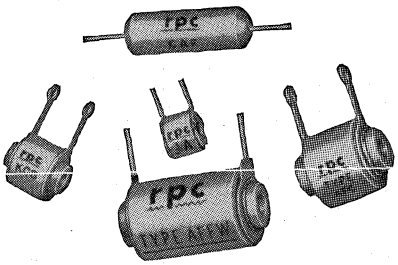
Low temperature and voltage coefficients. Standard resistance tolerance 10%. Tolerance of 5% and 3% available. Also matched pairs 2% tolerance.

ENCAPSULATED WIRE WOUND



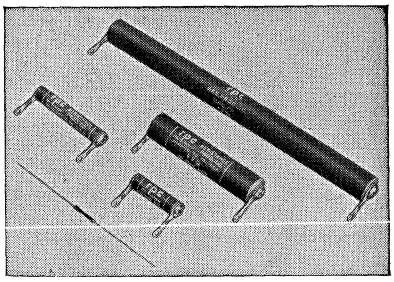
To meet the requirements for printed circuitry, RPC has developed Type P Encapsulated Wire Wound Precision Resistors Miniature, single ended units designed for easy rapid mounting on printed circuit panels with no support other than the wire leads. Many newly developed techniques are employed in the manufacture of Type P Resistors. These units can be operated in ambient temperatures up to 125°C. and will withstand all applicable tests of MIL-R-93B. Available in 7 sizes, rated from 1/10 watt to .4 watt. ¼″ diameter by $\frac{5}{16}$″ long to ⅜″ diameter by ¾″ long. Resistance values to 2 megohms. Tolerances from 1% to 0.05%.

UNSEALED WIRE WOUND



Unsealed precision resistors are wound on steatite forms and are used for all general requirements. They can be furnished with all resistance alloys in tolerances from 1% to .02%. These resistors will meet the requirements of MIL-R-93B. Special winding techniques, impregnation and thermal aging result in resistors of exceptional stability. They are available in a wide variety of sizes, styles and terminal types. Matched resistors, networks and special assemblies can be supplied.

HIGH FREQUENCY



Used where requirements call for very low inductance and skin effect in circuits involving pulses and steep wave fronts. Depending on size and resistance value, these resistors are usable at frequencies to over 400 mc. Resistance values range from 20 ohms to 100 megohms with tolerance of 20% to 5%. 2 types available.
TYPE F resistors (shown) in 10 sizes from $\frac{9}{16}$″ long x 0.10″ diameter to 6½″ long x $\frac{9}{16}$″diameter, with lugs or wire leads. Power ratings ¼ to 10 watts.

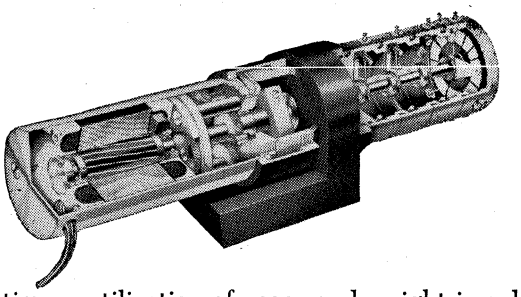
NON-LINEAR POTENTIOMETERS

An example of Spectrol's progressive engineering is the use of the IBM 610 computer for calculating non-linear functions for special non-linear potentiometer applications. The only precision potentiometer manufacturer adopting IBM computer techniques within their own plant. Spectrol now provides potentiometers with complex non-linear characteristics in less time to closer tolerances. Information describing the non-linear functions in the form of mathematical formulae or X and Y coordinates is entered into the computer. Previously programmed tapes carrying the general equations for non-linear calculations operate on the data to compute an output in terms of winding equipment settings and cam angles and radii. Using an electric typewriter as a readout device, the settings are printed on a form which is sent to the shop for production. Spectrol's technique completely eliminates guesswork and laborious time consuming, hand calculations. Since the computer is self-checking, results are error free. Through the use of the computer, calculations that formerly took 4 to 6 days are reduced to a matter of minutes.

PRECISION MECHANISMS



Optimum utilization of space and weight in subsystems design using electro mechanical elements can be achieved by coaxial mounting of rotary components on common or parallel shafts. This "unitized" or logical subsystem concept offers the systems designer almost unlimited freedom of selection in packaged modular subsystems. The complete functional Spectrol module, spares the systems designer from the details associated with the assembly of various rotary components. Many combinations of servos, synchros, resolvers, potentiometers, switches, motors, mechanical counters and clutches are available. If your problem involves combining such components, your nearby Spectrol engineering sales representative will be glad to assist you.

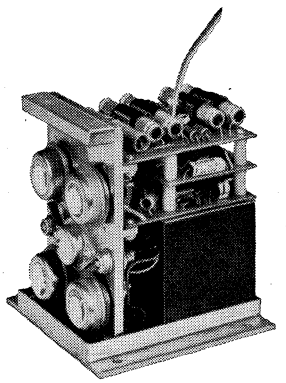
Transidyne TRANSITORIZED CONVERTER-INVERTERS



TRANSIDYNE transistorized converters and inverters are completely solid state devices which convert ac or dc input voltages to ac and dc outputs of different voltage levels or frequencies. Typically, dc input voltages can be converted to ac output voltages of any frequency up to 2000 cps. AC input voltages can be converted to ac output voltages of a different frequency and value. AC or dc input voltages of one value can be converted to dc output voltages of other values.

TRANSIDYNE units, completely replace obsolete motor-generator and vibrator type devices. Offering outstanding reliability and flexibility of operation, applications for Transidyne transistorized converter-inverters include: Aircraft radio, radar and utility power supply. Missile instrumentation power supply. Mobile and marine radio power supply. Remote radio telephone and telegraph. Portable powerpacks. All types of military and commercial electronic and electrical devices requiring rugged, reliable, power sources. *(Write for Data File 701).*

With plants in California and New York, Spectrol offers 31 representative offices in the Western World, and 25 stocking distributors in principal cities throughout the United States and Canada for rapid delivery and immediate service.

Give your nearby Spectrol representative or distributor a call next time you need precision potentiometers, precision mechanisms, or TRANSIDYNE converter-inverters. He'll be happy to serve you. Or you may write the factory. Please address Department E59.

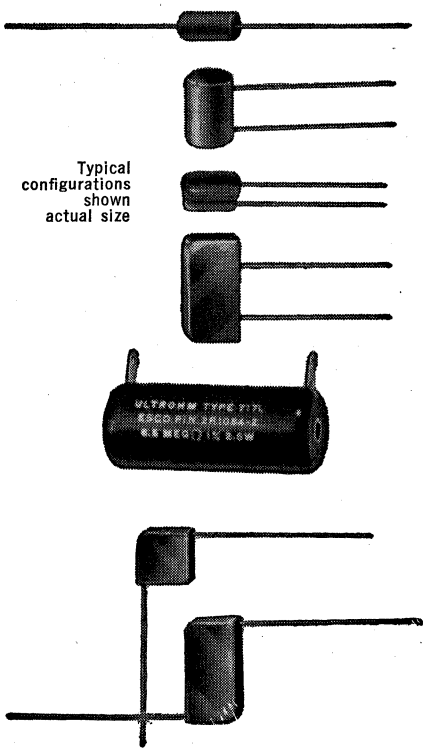
ULTRONIX

• Precision Miniature and Ultraminiature WW Resistors
• Close Tolerance Matched Networks
• Trimming Potentiometers



Typical configurations shown actual size

TYPES AND SIZES — ULTRONIX resistors are supplied with axial or radial leads, or with solder lugs. All lug types are made with a metal tube through the center of the resistor permitting secure mounting without changing resistance values.

RESISTANCE — ULTRONIX resistors are available from one milli-ohm to twenty megohms.

TOLERANCE — ULTRONIX specializes in the manufacture of extremely close tolerance resistors on a production basis. Tolerance specifications as tight as plus or minus 0.01% can be met even at very low resistance values.

TEMPERATURE COEFFICIENT — Standard ULTRONIX resistor temperature coefficient is fifteen parts per million per degree Centigrade over the entire operating temperature range. Resistors can be supplied with a specified temperature coefficient as low as minus one hundred parts per million or as great as plus 0.6% per degree Centigrade.

FREQUENCY CHARACTERISTIC — ULTRONIX resistors are made up of multiple pi reversed windings. These are substantially non-inductive up to 50 kc. Rise time to 0.1 μsec available on special order.

CONSTRUCTION DETAILS—ULTRONIX resistors are wound on bobbins compression molded with the external leads in place, assuring the firmest possible anchorage. Mid-ohm* alloy (180 alloy) is used exclusively for leads and lugs. All joints are welded.

ENCAPSULATION — ULTRONIX resistors are completely sealed by compression molding in an alkyd resin which has a coefficient of linear expansion exactly matching that of the resistance wire. This eliminates strain coefficient which causes a synthetic temperature coefficient in resistors encapsulated in other materials. Moisture absorption and thermal conductivity properties of ULTRONIX potting resin are also superior. ULTRONIX resistors exceed the requirements of MIL-R-93A and MIL-R-9444

MATCHED SETS AND NETWORKS

Available in a wide range of values, close tolerance matched networks and sets are made with division ratios matched as closely as 0.001% and absolute values with 0.01%. An example of current production is a ratio set of thirteen resistors each matched to the master resistor within ten parts per million with absolute resistance values held to within 0.01%.

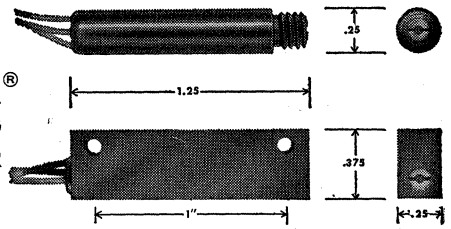
The ULTRIMMER® TRIMMING POTENTIOMETER



The Ultrimmer® is a wire wound trimming potentiometer introducing unique design features to provide a smaller, more convenient wide range device for use wherever rugged resistance trimmers are required. The Ultrimmer® is available in either the cylindrical or rectangular case. Contact against the wire is made under constant and correct tension. This is accomplished by a unique design configuration in which the resistance wire is wound on the inside diameter of the Ultrimmer® body with the slider positioned in the center. With the wire space-wound and potted in alkyd, unusually low temperature coefficient and high heat dissipation, as well as elimination of vibration problems, are special features of the Ultrimmer®. Standard models with resistance values from 10 ohms to 150 k ohms and infinite resolution models up to 5 k ohms are available.

VECO GENERAL PURPOSE BEAD THERMISTORS

PERTINENT DATA

VECO glass-coated or glass-enclosed thermistors may be operated satisfactorily up to 500°C (932°F). However if exceptional stability is required, operating temperatures should be held to a maximum of 300°C (572°F). These temperature ratings apply to the thermistor only and in some cases have been reduced because of the temperature limitations of their mountings, finishes, or terminals.

Physical dimensions shown are in inches. Values specified, unless otherwise noted, are approximate.

Lead material shown as Pt indicates platinum, and Pt-Ir indicates platinum-iridium. VECO bead type thermistors are hermetically sealed in glass and not susceptible to corrosive agents. They have a great many applications which include: temperature measurement, indication, control, and compensation; liquid level or flow devices; fire alarms; gas detection; time delay; insertion probes; etc.

VECO GENERAL PURPOSE GLASS COATED BEAD THERMISTORS

The VECO 32A7, 32A8, and 34A1 shown in Fig. 2A have the stub ends glass coated.†

VECO "LOX" THERMISTOR BEAD AND PROBE* TYPES

VECO "LOX" units are unique in that they utilize glass enclosed bead type thermistors and were developed to meet industry's demand for sensing elements suitable for the measurement and control of fluid temperature, level and flow in the liquid oxygen temperature range. VECO THERMAL CONDUCTIVITY CELLS

VECO Thermal Conductivity Cells are available in a variety of cavity configurations to meet any requirement—diffusion, open diffusion, or direct flow. The sensing elements consist of a pair of specially designed thermistors to insure the greatest possible accuracy and sensitivity. They are available in a wide range of resistance values and may be used for high or low temperature operation. Shown below are a few of the many cells available. The electrical output of VECO cells is several millivolts per percent change of CO_2 in N_2.

1. Diffusion type: Normal rate of response. Insensitive to flow.
   - M138 Brass. One gas passage. Temperature compensated. Pair of 2000 Ω thermistors with bridge components.
   - M142 Stainless Steel, two gas passages. Temperature compensated. Pair of 2000 Ω thermistors with bridge components.
   - M234 Stainless Steel, two gas passages. Pair of 2000 Ω thermistors.
2. Open Diffusion: Moderate rate of response. Slightly flow sensitive.
   - M182 Stainless Steel, two gas passages. Pair of 2000 Ω thermistors with bridge components.
   - M236 Stainless Steel, two gas passages, pair of 8000 Ω thermistors.
3. Direct Flow: Rapid rate of response. Flow sensitive.
   - M225 Stainless Steel, two gas passages. Pair of 100,000 Ω thermistors.
4. High Temperature.
   - M227 Open diffusion type. Pair of 8000 Ω thermistors.
   - M229 Direct flow type. Pair of 100,000 Ω thermistors.

VECO Varistors are specified with a nominal continuous power rating that is defined as that power which can be dissipated continuously in the Varistor at 25°C (77°F) when mounted appropriately for the type of unit, i.e., discs suspended by its leads in air, washers mounted in intimate thermal contact with metal plates or brackets.

VECO Varistor uses include surge suppression, voltage regulation, Sonar transmission switches, etc.

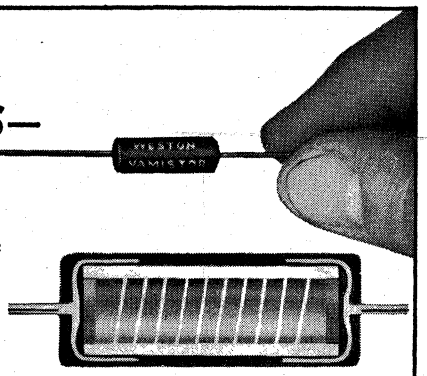
WESTON Vamistors

precision metal film RESISTORS

A DAYSTROM UNIT

MORE STABLE THAN WIRE-WOUND RESISTORS— YET LOWER IN COST!



Virtually zero temperature coefficient • noise free • excellent high frequency characteristics • absolutely stable at low temperatures, in shock or under vibration • shelf life drift only a fraction of a percent per year • will not open under overload conditions • only .02% change in moisture tests • will change less than .5% in 1000 hour load life test at 125C. More stable than precision wire-wound resistors, yet lower in cost! Surpasses tightest MIL specifications! For complete information on Weston Vamistors, including types, ratings, prices, etc., write WESTON Instruments, Newark 12, N. J., Division of Daystrom Inc.

Unlike other metal film resistors which have the resistance element deposited on the outer surface of the tube, in the Vamistor, the alloy is actually fused into the inner surface by a new electrothermal technique which creates a glass-hard embedded resistance element that will withstand abrasion, thermal shock, and voltage surges to a greater extent than any ordinary film type.

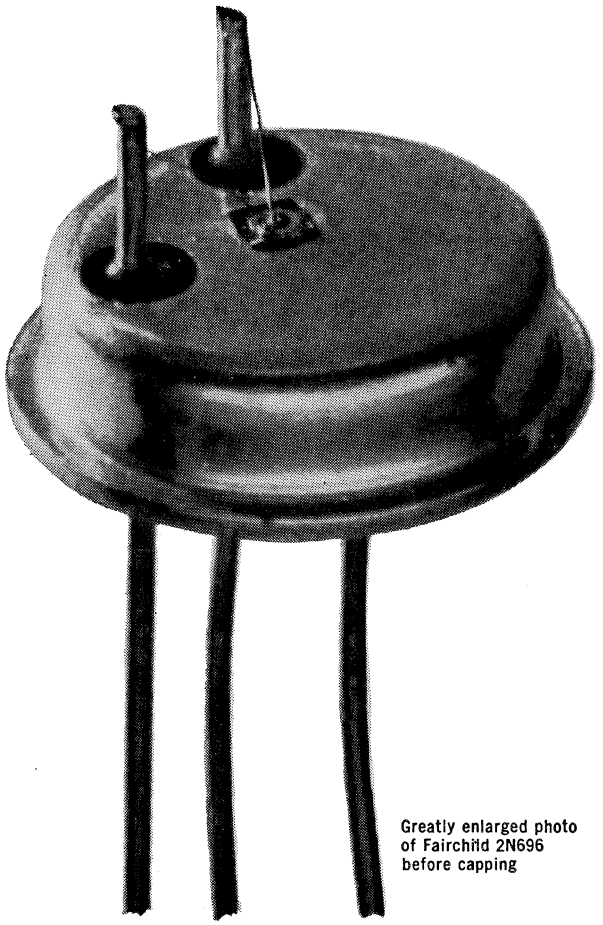
FAIRCHILD SILICON MESA TRANSISTORS

IN BOTH POLARITIES

Four models of great importance to the computer-circuit designer



Greatly enlarged photo of Fairchild 2N696 before capping

Important – because for high-speed switching, Fairchild's 2N696, 2N697, 2N1131 and 2N1132 are the most advanced transistors available. They are solid-state diffusion devices, a type that is certain to dominate computer-circuit applications in the future because of its superior combination of speed, power and reliability. Fairchild Semiconductor Corporation was first to offer solid-state diffused NPN silicon transistors of such high performance – and again first in offering PNP silicon transistors closely matching these NPN transistors in both high frequency and DC characteristics. All are in quantity production and available from stock.

Speed and power in combination

80 milli-micro-second rise time is typical. Two-watts dissipation at 25°C. and 10 ohms maximum saturation resistance provide high-current capability even at elevated junction temperatures.

Utmost reliability

Storage at 300° C. in excess of 1000 hours caused no serious changes in these transistors, assuring a large safety factor at operating temperatures. Mesa construction as shown in enlarged photograph provides extraordinary ruggedness by eliminating suspension of any significant masses. Units have survived 22,000g, 4-millisecond duration shock test without damage.

NPN and PNP closely matched

The circuit designer need no longer be limited by unavailability of PNP transistors. Fairchild has them. And they are closely matched to the NPN transistors in DC characteristics, affording opportunities for circuit designs based on complementary symmetry.

General Electric has the complete line in transistors

General Electric offers you not only the "tried-and-true" transistors which have been in use for years, but also many dramatic new devices which are already making history in the industry.

Take G.E.'s new silicon controlled rectifier, for example. It both rectifies *and* controls current—opening up a vast new field of electronic control for heat, light, power and motion.

Whatever your application, your best bet is to check first with your G-E Semiconductor Sales Representative.

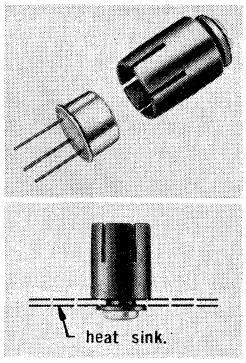
The TXS type transistor heat dissipator is designed to be a thermal link between the transistor and a heat sink. They are electrically insulated from transistor and heat sink with the new Insulube finish #448 which offers 500 volts insulation and retains the transistor with a friction fit.



GENERAL INFORMATION

The TXD and TXF transistor heat dissipators are designed for friction fit onto various transistor sizes thereby adding surface area for more efficient radiation and convection cooling.

IERC transistor heat dissipators illustrated here are presently in production. A more complete series of types and sizes are under development. Write our engineering department for complete information.

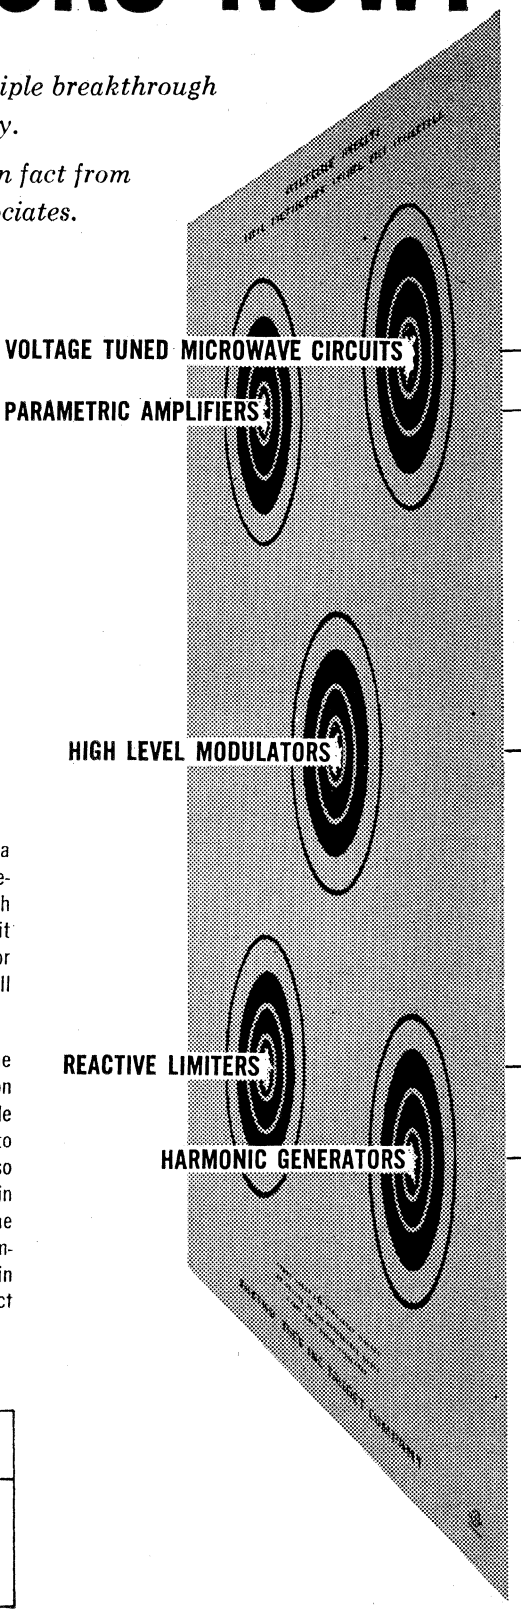
VARACTORS NOW!

YESTERDAY . . . *a multiple breakthrough in the laboratory.*

TODAY . . . *a production fact from Microwave Associates.*



This Microwave Associates varactor is a diffused silicon PN junction diode designed to be a variable capacitance with low loss at high frequencies. The unit complies with MIL-E-1 outline 7-1 for cartridge type crystal rectifiers and will fit most standard crystal holders.

In the standard form, the pin end of the diode is connected to P-type material on the top of a small "mesa" and the N-side of the silicon element is connected to the base. Reverse polarity units are also available. Mechanically reversible units in both polarities may be ordered but the single-ended units are generally recommended because they insure placement in holders with the proper end in contact with a heat sink.

TYPE	CUT OFF FREQUENCY (kMc)	CAPACITY AT ZERO BIAS ($\mu\mu$f)

MA-460B	30	6
MA-460C	40	4
MA-460D	50	4
MA-460E	60	3

VOLTAGE TUNED MICROWAVE CIRCUITS

The high Q of the varactor at microwave frequencies and its voltage variable capacitance provide excellent qualities for use in circuits as AFC, voltage variable filter networks, tuned microwave oscillators.

PARAMETRIC AMPLIFIERS

The varactor used in very simple circuits requiring no refrigeration has demonstrated low noise, high gain performance from 1 to 6000 mc. Noise figures of approximately 1 db at UHF and 5 db at 6000 mc. are typical. We believe the varactor will be the component of choice for receiver inputs from 30 to 6000 mc.

HIGH-LEVEL MODULATORS

For the difficult problem of imposing VHF and UHF intelligence on a microwave carrier, the varactor is a top performer. The varactor accomplishes the mixing function with signal gain in the side bands as opposed to present low efficiency techniques.

REACTIVE LIMITERS

The varactor has been used as a passive reactive limiter at UHF frequencies. It is believed that the varactor will be an ideal "receiver protector" as an adjunct to present UHF radar duplexing systems.

HARMONIC GENERATORS

The unique properties of the varactor provide highly efficient harmonic generation. Useful harmonics have been generated up to 100 kMc. With inputs at HF, VHF, UHF and lower microwave frequencies, conversion losses of considerably less than 1 db per harmonic have been observed. The varactor driven by transistor or tube oscillators appears very promising as a signal source in the microwave region.

PRECISION SERVO ELECTRO-MECHANICAL COMPONENTS AND SUB-SYSTEMS

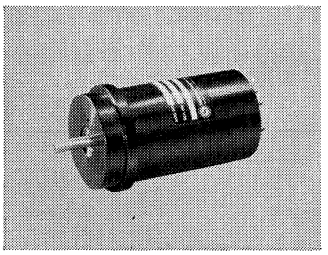
Design, development and manufacture — by American Electronics, Inc., first West Coast manufacturer to undertake the development of servos, synchros, resolvers, induction potentiometers and tachometer generators — independent of research centers and other original producers.

Long experience with these precision products ranks American Electronics among the leaders in the field. Exceptional leadership has been achieved in the area of miniature resolvers.

Retooling of production facilities for greater precision tolerances and higher production capability have established the Instrument Division of American Electronics as a leader in the field of precision component manufacture.

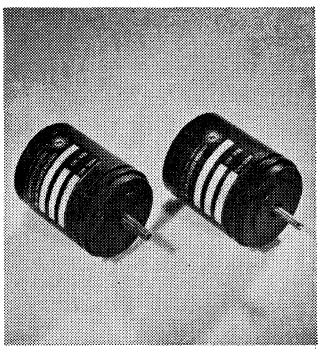
Now available in three types: (1) Winding Compensated—first precision Size 8 of this type ever offered; (2) High Impedance and (3) Low Impedance—both are Size 8 packages with Size 11 accuracy.

These units are designed for use at 26 volt nominal input signal of 400 cycle frequency. Total null voltage does not exceed 1 millivolt per volt input. Maximum functional error is held to 0.1% on all three versions. Frame diameter is .750 inch and the length is 1.241 inch.

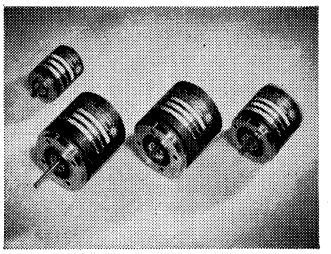


PRECISION RESOLVERS – Compensated, non-compensated and current feedback types. Input voltage to 100 volts...high and low impedance. Design frequencies from 50 to 15,000 cycles per second and sweep resolvers for use to 100 kc. Functional accuracies to 0.03% standard. Higher accuracies available by selection. Sizes 8, 11, 15 and 23.

INDUCTION POTENTIOMETERS–Brushless electromagnetic angular pickoffs which provide output voltage linearity proportional to angular shaft displacement. These units are essentially variable coupling transformers and can be used with a variable input voltage in multiplier circuits. American Electronics' Induction Potentiometers exhibit better than ±½% linearity, minimum phase shift, excellent resolution, and low null voltage under extreme environmental conditions. Size 15.

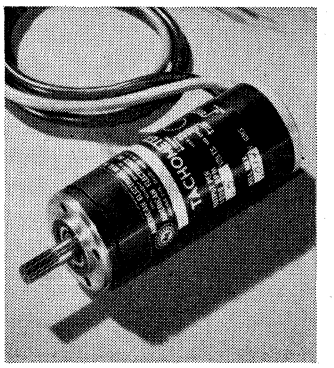


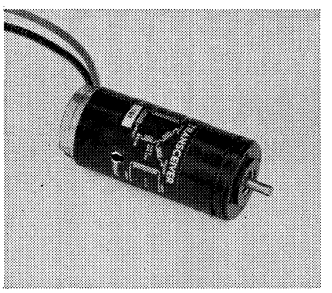
FOR SUB-FRACTIONAL AC AND DC MOTORS, SEE CLASSIFICATION 3500



SERVO MOTORS – Built to operate to temperatures of 200° C. 4, 6 and 8 pole models available, built to BU-ORD specifications. Servo motors have been qualified to meet humidity, salt-spray, temperature, and vibration requirements of MIL-E-5272A. Excellent electrical control characteristics facilitate efficient and stable servo system operation. Sizes 8, 11, 15 and 18.

SERVO MOTOR TACHOMETERS AND GEARED SERVO MOTORS – Standard of 115v. 400 cycle and low impedance transistor operation. Temperature compensated types for computing as well as damping tachometers with outputs to 3 volts per 1000 rpm. Size 8, 11, 15 and 18-15 Servo Motor Tachometers can be supplied with gearhead at any required ratio. Units meet environmental specifications of MIL-E-5272. Special voltage and torque requirements are available on request. Max. phase shift 5° when tuned with .0068 MF.





TRANSCEIVERS — Operate at ranges of −55° C. to +85° C.; maintain maximum following error of one degree. Harmonic distortion does not exceed 5%. Maximum shaft endplay, with 8 oz. reversing load, does not exceed .010 in. These units are currently being used in fire control systems, guided missile systems, and automatic data reduction systems. Standard models available in size 11, with design frequency of 400 cps.

1051-0100 AIR DATA SYSTEM

An electromechanical instrument of modular construction which responds to inputs of static pressure, pitot pressure and stagnation temperature. An unusually high order of sensitivity is possible by using a mechanical force balance between pitot and static pressure bellows and their resultant force on a floating junction. An output shaft rotation, which is a function of either pressure ratio, pressure differential or absolute pressures, is obtained through a servo system. Write for complete technical details.

RB701 ROTOR BALANCING MACHINES

This versatile, compact (bench mounted), equipment indicates precisely the corrections required to eliminate vibrations in rotating parts. Measurement of both dynamic and static unbalance in micro ounce inches can be obtained at speeds from 1000 to 200,000 rpm, yet measurement is independent of speeds. Completely assembled units can be balanced with the spin axis in either horizontal or vertical plane. Convenient controls allow calibration in units such as drill depth or slug size. Write for detailed technical literature.

What you should know about Cutler-Hammer

Cutler-Hammer has long held the respect of the aircraft industry because this company has been part of the aircraft industry for over 35 years. Today, as for the decades past, Cutler-Hammer engineers are working closely with the aircraft industry's leaders . . . thinking ahead, planning, designing and building for the future. Here is the record:

1920 Cutler-Hammer designed and manufactured the first line of switches ever created specifically for use in aircraft.

1938 Cutler-Hammer designed and manufactured the first d-c power relays ever created specifically for use in aircraft.

1943 Cutler-Hammer designed and manufactured the first a-c power relays ever created specifically for use in air-craft.

1949 Cutler-Hammer started development of the first environment-free power relays for use in aircraft.

1953 Cutler-Hammer submitted samples and certified test reports on the first hermetically sealed power relay to WADC and Bu. Aer. Cutler-Hammer configuration was adopted as industry standard by ASG.

1955 Cutler-Hammer designed and manufactured the first one hole mounting Lever Lock aircraft switches.

CROSSBAR SWITCHES

Scanners — Monitors — Switching Systems

The following describes basic crossbar switch types. Standard switches in smaller and larger matrices are also available. Non-standard size matrices are built to order.

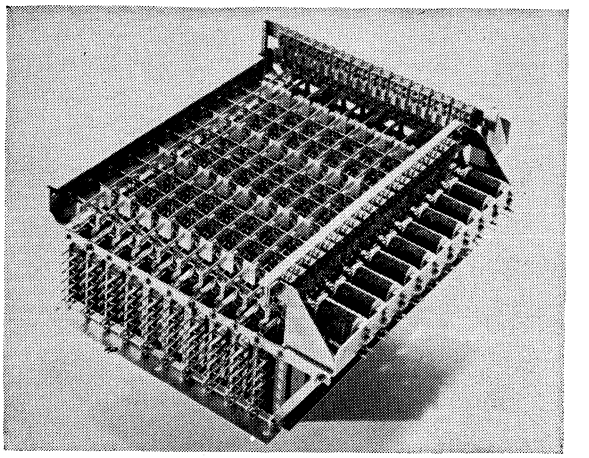
Outstanding Features:

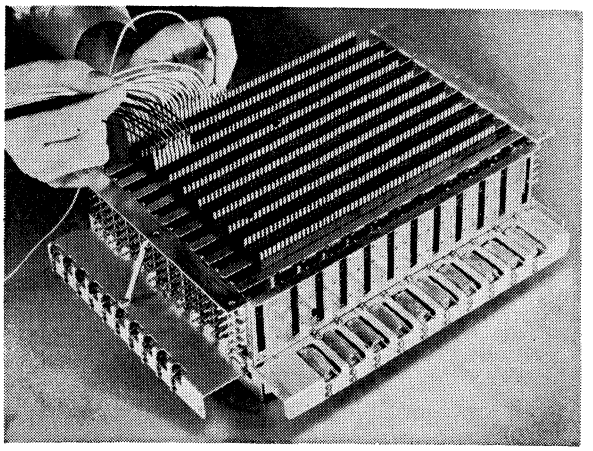
- switches up to 70 MC
- long life
- high insulation resistance
- low level switching
- small size and weight

TYPE A

Coordinate operation for signal distribution. 10 circuit group input to up to 20 circuit output (6 poles per circuit).

Function and operation: Group to Group switching. By means of a coordinate system of select and hold magnets operated sequentially, a mechanical operation is performed at a crosspoint. This mechanical operation in turn makes electrical connection at the crosspoint, closing a circuit between one input and one output. In sequence, by similar operation the balance of the inputs are connected to outputs in any combination.





Bottom view: Shows the 600 individual link terminals and several taper tab connectors in place.

TYPE F

Coordinate operation with terminal connections at each of 100 crosspoints, brings electrical information from as many as 600 sources to a single destination.

Function and Operation
Group to One Switching

By means of a coordinate system of select and hold magnets operated sequentially, a mechanical operation is performed at a crosspoint. This mechanical operation in turn makes electrical connection at the crosspoint, establishing a circuit to one of 100 crosspoint terminations. Each circuit has six poles.

TYPE P

Individually Controlled Magnets at each Crosspoint

Function and Operation
Group to Group Switching

Individual magnets at each crosspoint make an electrical connection at the crosspoint, closing a circuit between one input and one output. Any circuit combination can be set up in any sequence. Each circuit may have up to six poles. This operation is similar to normal relay operation but with the advantages of reduced space, the elimination of buss wiring, and the possibility of switching high frequencies.

TYPE PT

Group to One Switching

Similar to Type P, but with individual link terminals at each crosspoint.

2x10 six-pole switch with shielding.

4x5 six-pole switch with off-normal or control contacts.

ELECTRICAL			
A. SIGNAL CARRYING CHARACTERSTICS			
Crosstalk	Down 55 db at 4 mc. in a 10x10 switch with 75 ohm termination under the worst condition (parallel input paths connected to parallel output paths). Addition of shields on Type A switch in link direction gives a 75 ohm characteristic impedance through the switch, further reduces crosstalk.		74 db. down at 5 mc. between adjacent circuits and between conductors in the same circuit (with intermediate conductors grounded in a 2x10 switch on a 75 ohm line). Addition of shields in link direction gives a 75 ohm characteristic impedance through the switch, further reduces crosstalk.
Bridging Capacity	To ground between an input conductor connected to an output conductor in a 10x10 switch is 15 mmfd.	To ground between conductor to an output (crosspoint) conductor is 20 mmfd.	Line conductor to ground is 15 mmfd; link conductor to ground is 5 mmfd.
Breakdown Voltage	Occurs at not less than 1500 VAC between switching conductors and/or frame and across switching contacts.		
Insulation Resistance	Special materials give insulation resistance at 1 million megohms—conductors to frame and between conductors.		
Conductor Resistance	Through longest path is 0.3 ohms.		
Current Carrying Capacity	Contacts will carry 100 MA non-inductive at 50 VDC for 20 million operations; currents as high as 1 amp switched with some reduction in contact life. Off normal contacts: 150 mils non-inductive for 20 million operations for current required to operate switch magnet coils.		
Contact Bounce	Less than 200 microseconds on make—no bounce on break.		
B. OPERATING CHARACTERISTICS	Both hold and select magnets require 1.5 watts for normal operation.		
Coil Data	Coil will dissipate 3 watts continuously. Coils are available from 6 to 148 VDC. See SDS-108 for additional information.		
Off-Normal Contacts	Available for control or confirmation of magnet operation. Both SPDT & DPDT contacts are available associated with each magnet. Operating the switch magnet coils with proper arc suppression, the O/N contacts have a life of 20 million operations at 150 ma.		
Timing	Switch can be set up in 15 milliseconds at normal operate voltage. Scanning speeds of 60 CPS are attained with special drive circuits, see Bulletin 58-217. For additional timing information, Bulletin 58-212.		Operate time is 6 to 9 millseconds; release is 1 to 4 milliseconds at normal voltage, operate speeds down to 3 milliseconds can be attained with higher driving voltage.
Life	Normal life is 20 million operations per crosspoint without adjustment. Over 100 million is possible, dependent mostly upon electrical contact wear.		
MECHANICAL			
Terminals and Terminal Connectors	Connections to all terminals either by soldering or by use of AMP series 78 Taper Tab Connectors. Cunningham No. SP-1181 6-terminal connector may be used for plug-in connections to line terminals on all types of switches and to Link terminals on Type A & Type P switches. Plug-in connections to link terminals of Type F & Type PT switches may be made with Cunningham No. SP-1171 30-terminal connectors.

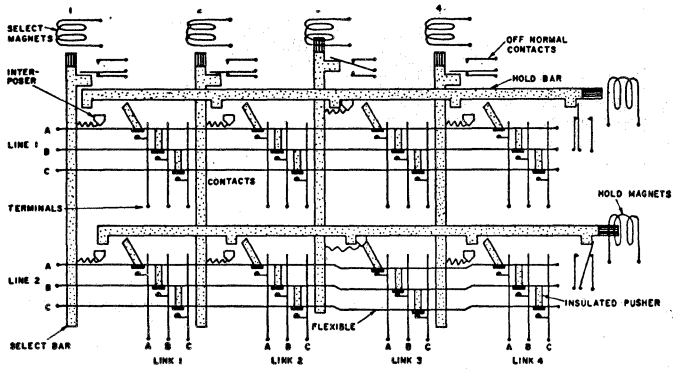
DIAGRAM OF TYPE F CROSSBAR SWITCH

Showing Schematic Mechanical Operation and Conductor Arrangement

1. For Simplicity, only 2 lines and 4 links of a 3 pole Type F Switch are shown—a 2x4x3 matrix, with select magnet No. 3 and hold magnet No. 2 actuated by externally applied D.C. voltage. This connects conductors as follows: Line 2A to second section of link 3A, line 2B to second section of link 3B, and line 2C to second section of link 3C. This same principle would apply to 2, 4, 5 and 6 pole switches.

This same schematic with link conductors being continuous through the entire length of the switch would serve to illustrate the Type A switch. The conductor arrangements of Types P & PT (directly operated) and Q & R (pushbutton) switches, are similar to those of the Types A & F (coordinately operated) switches, differing only in method of operation.



Modes of Operating and Controlling Switches

1. **Pushbutton** — Twenty pushbuttons arranged coordinately with the hold and select magnets of a 10x10 Type A or F switch, is the simplest form of control and random selection of any of the one hundred crosspoints. With the P switch, the buttons can operate the selected crosspoint directly.
2. **Dial** — For most remote control applications, the dial provides considerable saving of space and wiring and can also give scanning as well as random selection instructions to switch with only two wires. Multiple control can be easily set up.
3. **Punched Card or Tape** — Conventional binary (with decoder) or digital coded cards or tape can be used to select or scan switch. The addition of a simple ten-point high speed electronic multiplexer permits the switch to scan at high rates of speed.
4. **Self-Stepping** — Using off-normal or control contacts associated with the hold and select magnets, the switch will step itself at speeds up to 50 points per sec. The speed or scan program can be regulated by external command pulses.

Environmental Data

Vibration: Standard switches withstand acceleration forces of 20 gs. with excursions from 0 to .125 at 0 to 55 cps.

Humidity: Materials used are finished to provide good corrosion resistance.

Temperature: —55°C to 85°C operating range.

Fungus: Materials used in switch are inherently non-nutrient to fungus, except magnet coils.

Barometric Pressure: Down to 11.0" of mercury.

- Strain gage scanning
- Instrumentation
- Printed circuit testing
- Circuit testing and analysis
- Audio, video, sonar, radar switching and monitoring
- Automatic machinery programming
- Telephone, telegraph
- Telemetering
- Vacuum tube and transistor testing

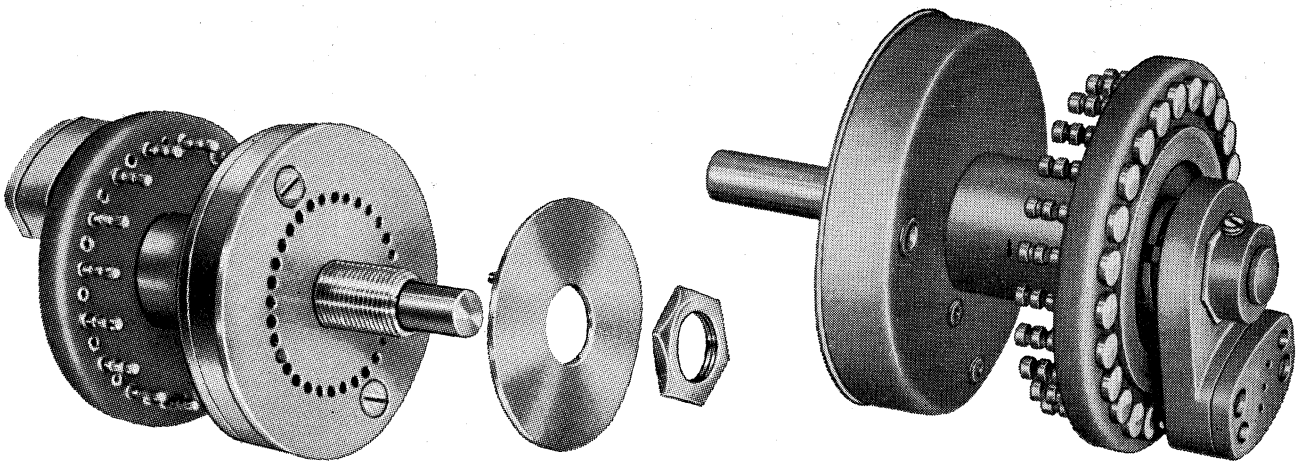
the new DAVEN adjustable stop switch



For flexibility in all types of circuit experimentation, laboratory work, breadboard setups, and in circuitry where the exact number of switch positions might be changed at a later date, the new DAVEN Rotary Switch with an Adjustable Stop is ideal. This unit has a maximum of either 24 positions with 15° spacing or 32 positions with 11¼° spacing. One, two, three, and four pole units are available in this design.

In common with all other DAVEN Rotary Switches, the Adjustable Stop Switch features sturdy, dependable construction; large silver alloy contacts and slip rings; tamper-proof, KNEE ACTION silver alloy rotor blades; high grade, accurately machined dielectric; and gold flashed turret-type terminals for ease of soldering.

STURDY, DEPENDABLE CONSTRUCTION FOR MILITARY USE

DAVEN switches are constructed to meet and exceed applicable military specifications on humidity, moisture, environment, temperature cycling, contact resistance, life, vibration and shock.

MILITARY SPECIFICATIONS

There is no specific military specification written around this switch. However, these switches will meet and exceed applicable paragraphs of MIL-S-3786, MIL-E-5272 and MIL-T-945A.

ELECTRICAL SPECIFICATIONS

Continuous current carrying capacity (not make or break) is 10 amperes. Switches are smooth operating, positive action, rotary selector type. Switch contact resistance remains extremely uniform and is in the order of .003 ohms. The capacitance between switch contacts, and between switch contacts and return slip rings, varies from 0.4 mmf to 2.5 mmf depending on the switch. Breakdown voltage between contacts and slip ring is 3000 Volts Peak.

ENCLOSED, KNEE ACTION, MULTI-LEAF ROTORS

Each leaf of the enclosed switch arms employs separate pressure springs to provide self alignment, KNEE ACTION and equalized pressure, to insure low and uniform contact resistance. The KNEE ACTION rotor is of tamper-proof construction.

All DAVEN Adjustable Stop Switches listed in the following section employ enclosed KNEE ACTION blades.

HIGH GRADE ACCURATELY MACHINED DIELECTRIC

Switch contacts, slip rings and rotary blades are securely mounted in high grade, low moisture absorption type dielectric. Under normal service conditions, the leakage between contacts remains in the thousands of megohms.

ACCURATE CONTACT POSITIONING (DETENTS)

Positioning is obtained by a spring loaded, free turning roller and a large accurately fabricated stainless steel gear, permanently swaged to the stainless steel shaft.

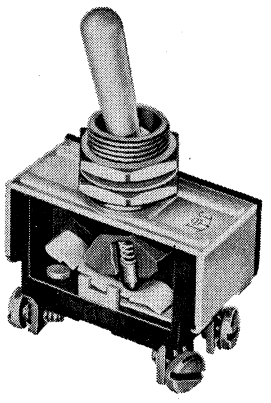
Instrument Quality J-B-T Components

J-B-T INSTRUMENTS, INC.

TOGGLE SWITCHES — HEAVY DUTY — SINGLE-HOLE

GOVERNMENT-QUALITY TYPES DESIGNED FOR JAN-S-23, DDAX SERIES, MIL-S-21195 (Ships) AND (WITH TOGGLE SEALS AND OTHER VARIATIONS) MIL-S-6745, AN-S-20a, AND MIL-S-3950A. REGULARLY TESTED TO MEET ADVERSE OPERATING CONDITIONS



Overload . . . Tested to make and break at 50% overload for brief periods. To assure performance of these switches with their comparatively heavy current ratings, J-B-T features ample size **solid coin silver contacts and rocker arms** instead of clad or brazed construction. Contact resistance is under 0.005 ohms. High dielectric exceeds 1000 volts r.m.s. at 60 cycles at sea level.

Cold and Heat . . . Specialized aircraft lubricant facilitates mechanical and electrical operation at —85°F to 185°F.

Vibration and Shock . . . No momentary make or break or mechanical damage during severe shake and 75 G's drop tests.

High Humidity . . . Materials, dull finish on outside metal parts (per Armed Services specifications) and lubricant enable switches to withstand tropical climates.

Salt . . . Meet 100 hour Salt-Spray Test QQ-M-151a which is twice the required minimum of JAN-S-23.

Rugged Service . . . Generously proportioned and substantially built for extra life. For instance, both screw-type terminals and solder lugs easily withstand a 30 pound pull test. Operating cycles far in excess of minimum specified as acceptable. Quality standards are maintained by in-plant production testing.

20 AMP. — HEAVY DUTY

This page covers 114 models of toggle switches nominally rated at 20 amp. at 125 VAC, and 10 amp., 250 VAC, and other higher and lower ratings where specified in JAN-S-23 or other pertinent specifications.

Note A: AN and MS types use internal sand dust toggle seal and high performance features involving extra cost; some models not regularly stocked

Note B: Specification MIL-S-3950 covering suffix numbers—19 and below, has been withdrawn by the Government, and is being superseded by MIL-S 3950A which has suffix numbers—21 and above. For heavy duty switches, specification MIL-S-3950A provides for screw terminals only. This type may be used for soldering by removing screws.

Note C: Dimensional data: All AN3021 switches, MS35058—1 thru 8, and MS35058—21 thru—31 have the same dimensions as ST40 switches as illustrated. MS35058—9 thru—19 have the same dimensions as ST42 switches as illustrated. All AN3027 switches and MS35059 switches are the same dimensionally as the ST50K switch as illustrated except AN3027-4, -5, -6, and -10; MS35059 -3, -6, 10, -11, -14, -17, -25, -26, -29 and -30, which are the same as the ST50S switch as illustrated.

J-B-T instrument-type switches are used widely in quality test equipment, portable indicators, inspection set-ups, and electronic or aviation applications where trouble-free, dependable performance is of major importance. All models stem from three basic types, molded or laminated, 14 and 20 positions—designs which give extra contacts in minimum space.

Most models are manufactured in shorting make-before-break or non-shorting break-before-make. Laminated rotary type SS-14 is standard as 1 to 6 decks; molded rotary types MS-14 or MS-20 are shown as 1 to 6 decks in the catalog, but frequently are built longer to order. Laminated lever action switches are made in 1 or 2 decks, 3 or 4 positions, shorting or non-shorting, some with spring return. The molded lever, 5 position type, is described separately.

Features of these Switches

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test. For SS-14: ball bearing action, beryllium-copper balanced spring and sharp detent assure positive indexing. Springs of switches are generally replaceable without disturbing soldered connections. Laminated plastic decks and rotors selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms. For MS-14 and MS-20: all moving contacts are enclosed to minimize dirt and corrosion. Rectangular drive shaft and a new balanced pawl give precision, positive indexing. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain, sand and dust; explosion; shock; and endurance values.

Compactness — 14-position switch takes 13 circuits and "off" in 2" circle; 20-position switch handles 19 circuits and "off" in 2 3/32" circle. Each deck above first adds only 5/16".

Low Contact Loss — Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less during the useful life of the switch.

Ample Dielectric — AC or DC; normal carrying capacity (make-and-break) 1 amp., 125 volts inductive; maximum momentary capacity (not make-and-break) 5 amp.; maximum dielectric voltage between contacts 1,500 volts, R.M.S.; between decks and ground, 2000 volts R.M.S.

Reasonably Priced — Because of quantity production, standard models of these switches are priced a notch above the usual radio switch but substantially below various specialized brands.

Military and Other Variations — The following can be supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) vacuum impregnation of laminated rotors, decks, spacers, and ceramic spacers with approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 live positions, no off, (add suffix F, as SS-14-2F); (e) common position in non-standard location; (f) bonded construction in molded types, as mentioned below.

MOLDED 5-POSITION LEVER

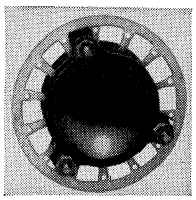
For the first time designers have available 5 live positions, 2-circuits per deck, in a molded lever action switch, the MS-20-1L5A-1 as illustrated. Characteristics are similar to the basic MS-20 series. For mounting information, request print SK-64.

MOLDED 6-POLE DOUBLE-THROW

The cut-away illustration of MS-20-1-6DT shows this unique switch which can simplify circuits, save space, and speed up switching. Available in 1 or 2 decks with 6-poles per deck, as DT (non-shorting) or DTS (shorting) Series, the DT models offer the same quality features as MS-20 and the DTS are similar, except rated 1500 volts R.M.S. between contacts and ground, 1000 volts R.M.S. between contacts.

BONDED RUGGEDIZED (B-TYPE)

The MS-14 and MS-20 series may be ordered with bonded construction as MS-14B- or MS-20B-. Thus, a 14-position two-deck switch is MS-14B-2. Cured laminations bond the adjacent decks for ruggedization, shock-proofing, and further enclosure. This superior quality feature adds 35¢ per deck to the catalog price.

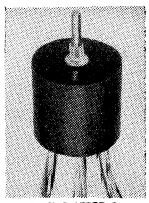


MS-14R-1
Unique Contact Ring

RING-CONTACT (R-TYPE)

To Minimize Soldering

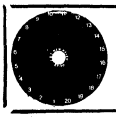
Molded MS-14R- (per print SK-88) and MS-20R- (per print SK-89) are available on special order with the outside edge of all contacts held together by an integral ring, as illustrated. This exclusive feature eliminates the need for soldering jumpers between adjacent contact positions and assures excellent connections. The ring can be easily cut out between contacts. Adds 7/32" to O.D. (Excellent for development work or assembly savings.) Illustrated above.



MS-14XX-3
Encapsulated

NEW ENCAPSULATED (XX-TYPE)

In response to requests for extra-high-reliability switches which are vaportight and fully encapsulated, J-B-T is producing on a custom basis switches of the MS-14XX- (diameter 2 3/8") and MS-20XX- series. Please request sketch SK-107 and data on properties of encapsulation material. Gland-sealed shaft and rear connections by coded wire pins, or AN connector will be quoted on request. Illustrated at right.



ETCHED DIAL PLATES

For EP-19, off through 19, illustrates the dial indexing plates available for the SS-14, MS-14 and MS-20 rotary series. All have dull black finish — with raised bright numerals — and are 2¾" in diameter.

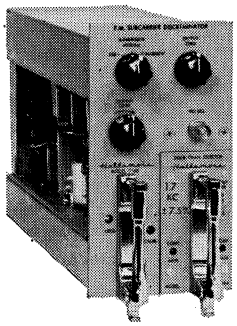
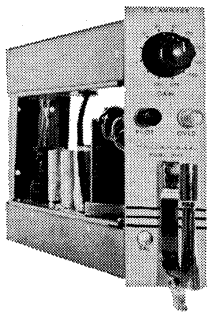
HALLAMORE "BUILDING-BLOCK" INSTRUMENTATION SERIES

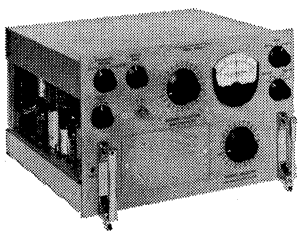
The need for economy, time and space savings, and elimination of operator error has brought about the development of the Hallamore building-block series of system components. Plug-in configuration permits simple adaptation to existing systems . . . extreme versatility in newly developed systems. Modification or repair in the field becomes a simple replacement operation, within the capabilities of relatively unskilled operators. Application of the most recent advances in the state-of-the-art provide high dependability and outstanding new levels of performance.



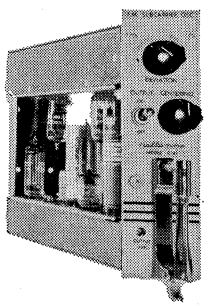
PHASE LOCK DISCRIMINATOR (HEC-0162A), a modular design, includes three discriminators and a metering assembly (HEC-0176). Module case (HEC-0145) is 8-3/4″ high, 19″ wide, 18-1/2″ deep. Each discriminator requires one channel selector (HEC-0168), available for all IRIG channels, I through E, and one regulated power supply (HEC-0144). Module accepts signals at levels of 10 millivolts to 20 volts and converts frequency intelligence to an analog output voltage, flat within 0.5 db over the IRIG specified bandwidths.



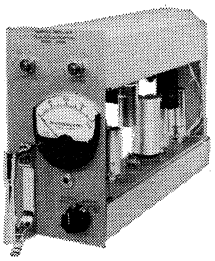
DC AMPLIFIER (HEC-0142A) is a low-drift, chopper stabilized amplifier, featuring wideband response. The front panel switch has 12 positions: off, on, and 10 accurate gain steps (from 1 - 1000) with overlapping Vernier potentiometer. It is suitable for signal conditioning in instrumentation systems, operational use in analog computer systems, or any application requiring amplification of a DC or AC signal up to 40 kc. Eight units fit module case (HEC-0145) for mounting on a 19″ standard relay rack.



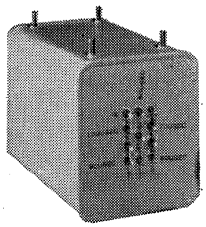
BAND-SWITCHED PHASE-LOCK DISCRIMINATOR (HEC-0169A), a modular design, houses all input filters, output filters, switching circuitry, and tape speed compensation networks, in addition to the basic discriminator, in a panel space of 7-3/4″ by 12″. It covers all IRIG channels, and a single control provides complete switching to each channel. Its flexibility affords outstanding advantages in missile checkout, quick-look analysis of recorded data, and laboratory development work.



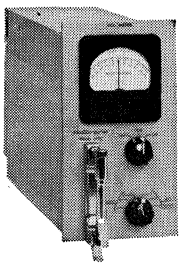
FM SUBCARRIER OSCILLATOR (HEC-0161) accepts analog voltages nominally 0 to ±2.5V and provides an output frequency modulated by the incoming signal. The nominal center frequency for a given unit is selected by means of a plug-in oscillator channel selector (HEC-0164), available for all IRIG channels, I through E. As many as six units may be mounted in a standard (HEC-0145) module case together with a summing amplifier (HEC-0166).



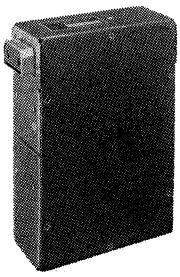
SUMMING AMPLIFIER (HEC-0166B) accepts up to 18 subcarrier oscillator outputs for recording a composite signal on a single magnetic tape channel. Each unit includes a timing oscillator capable of generating timing signals on 50 kc or 100 kc for tape speed compensation. The summing amplifier is normally powered by power supply (HEC-0143A).



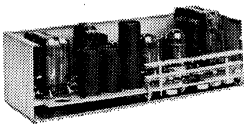
SUBCARRIER DELAY UNIT (HEC-0197) provides the requisite time delay for the composite set of subcarrier channels (I through E) when using the Hallamore reference discriminator (HEC-0170) to generate compensation signals. The delay unit measures 3-3/8″ by 3-15/16″ by 4-1/4″ and is normally mounted behind the patch panel.



METER ASSEMBLY (HEC-0176) is intended for common metering of the outputs and test points of three (HEC-0162) discriminators. A meter switch is provided for selecting 10 volt and 100 volt scale positions. A switch is provided for selecting the desired discriminator output or test point.



POWER SUPPLY (HEC-0143A) provides the requisite power for Hallamore instrumentation series components in all cases where the common supply (HEC-0144) cannot be economically utilized and/or where it is desired to maintain dc isolation between circuits. The individual supply provides all filament power, +250vdc, −250 vdc, and a bias voltage of −480 vdc.



REGULATED POWER SUPPLY (HEC-0144) is mounted internal to module case (HEC-0145) and is capable of supplying any combination of the Hallamore "building-block" series components, including up to eight DC amplifiers or six FM subcarrier oscillators. This supply provides all filament power, +250 vdc, −250 vdc and a bias voltage of −480 vdc. Regulation is 0.1%, ripple 10 millivolts or less.

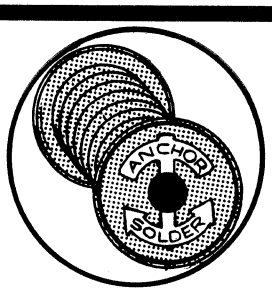
SOLDER HEADQUARTERS

ANCHOR METAL



SHURFLO ROSIN CORE SOLDER

When heated, a special activating agent is released, which provides a more vigorous fluxing action for the rosin and makes a faster soldering job possible. Readily solders brass, zinc, nickelplate, and other metals. During soldering the activating agent is destroyed and only pure rosin remains. Conforms to Fed. Spec. QQ-S-571c Available in all diameters from .015 up, on spools, 1, 5 and 25 lbs.

ANCHOR SOLID WIRE

Ideal where the flux is used separately. Available in standard diameters of 1/32", 1/16" and 1/8". Put up in 1, 5, 25 and 50 lb. spools. Packed 50 lbs. to carton.

ANCHOR ACID CORE SOLDER

A general purpose solder. Free flowing, non-sputtering; making a strong bond. Used extensively in the automotive, hardware and industrial field. Easy to use.

Available in 1, 5 and 20 lb. spools.

Multicore

FIVE-CORE SOLDER

World's finest!

Available in the 7 lb. bench reel, 1 lb. dispenser carton and the 50¢ Service Pak

Available in the 7 lb. bench reel and 1 lb. Dispenser Carton

STANDARD TIN/LEAD ALLOYS

Five separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are five cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to thin rapidly produces perfect joints with less solder. Greater coverage per pound.

ONLY SOLDER MADE WITH NON-CORROSIVE, EXTRA-ACTIVE ERSIN FLUX!

ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use. Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.

NEW! COPPER-LOADED SAVBIT ALLOY

Copper-loaded SAVBIT is one of a number of solder alloys developed for the industry by Multicore, it is entirely different—and, it is patented. SAVBIT alloy contains its own copper, and therefore will not take the copper of the soldering iron tip into the molten solution during soldering. This absorption of copper when any standard alloy is used is a basic reason for the wearing out of expensive copper tips, and the need for constant refinishing of the tip.

Comparative tests with solders having pure tin/lead alloys and the new Ersin Multicore copper-loaded SAVBIT alloy have been made on assembly lines of electronics plants. Results of these tests have proven that startling production efficiencies and economies may be realized when the wear and corrosion of copper soldering iron tips is curbed, using SAVBIT alloy. Equally as important... a higher standard of soldering quality is assured for a much longer period of time.

It is hardly necessary to emphasize the great economies that can be effected in soldering iron maintenance and great efficiency on the assembly line, by using this new alloy. SAVBIT alloy is available in Ersin Multicore 5-Core Solder containing non-corrosive extra fast Ersin Flux in 14, 16 and 18 gauge. Its melting point is virtually the same as standard tin/lead alloys. There is no appreciable difference between SAVBIT and normal tin/lead alloys in electrical conductivity or tensile and shear strength — in fact, the strength of SAVBIT is slightly greater.

HANDLES— are Hi-Impact Styrene 4" x 3/8" hex—won't roll off the work bench.

METAL ENDS— (separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END— straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since handles act as insulation, there is no danger of shock when working on sets in operation. 1/8" forks are made especially for use on printed circuits and transistors.

SPADE END— is a reamer to clean lug holes of solder.

CURVED END— can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

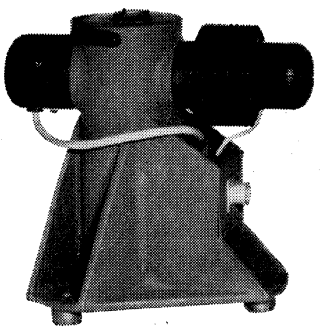
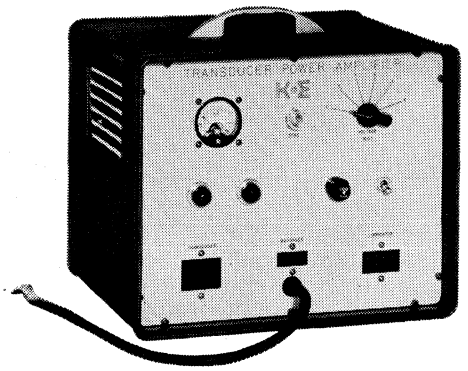
SPECIAL DEVICES*

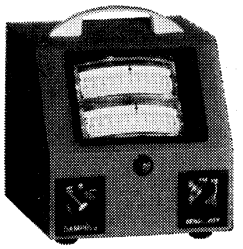
FOR INDUSTRY, SCIENCE AND THE MILITARY



Sensing Unit



Amplifier



Indicator

Electronic Tilt-Angle Transducer

The K&E Tilt-Angle Transducer consists of the three units illustrated. The signal from the sensing unit is transmitted through the amplifier to the remote indicating unit by cable. A chart recorder can be used in addition to the indicator to provide a permanent record of the tilt changes in the structure, or the signal from the amplifier can be fed directly into a servo mechanism to make the system self correcting.

This ability to monitor and control tilt from a distance, combined with the ultra sensitivity of the unit, makes it possible to achieve alignment tolerances in radar axles, stable platforms, missile ground support equipment, and similar devices to a degree of accuracy heretofore impossible.

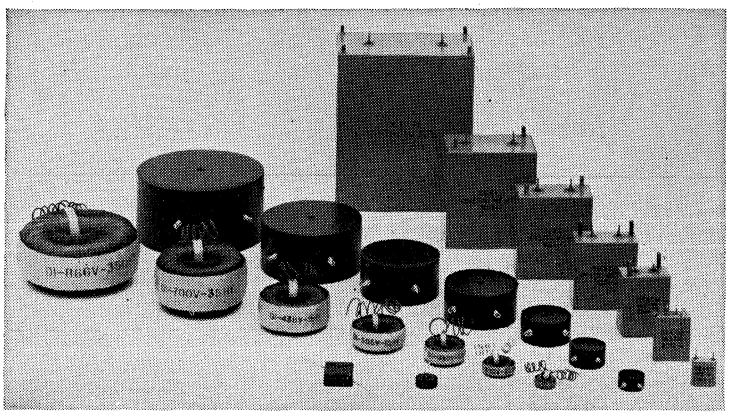
TRANSFORMERS • MAGNETIC AMPLIFIERS

TOROIDS

Subminiature, miniature, and standard toroids wound and treated to obtain the maximum Q and stability—uncased, cased, or encapsulated are available with one week delivery on small quantities of popular types in most inductances. Special coils with special characteristics can be made to your specifications. Ask for Bulletin C for complete data, Q curves and descriptions or order by the standard W.E. core numbers. Specify inductance and finish.



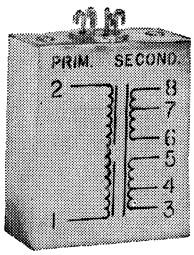
MAGNETIC AMPLIFIER

Keeping astride with the advances in new materials and techniques Deeco manufactures a wide range of toroidal magnetic amplifiers.

We design to your specifications thereby giving you the optimum performance. Three phase or single phase 400 cycle line regulators for high temperature applications are immediately available.

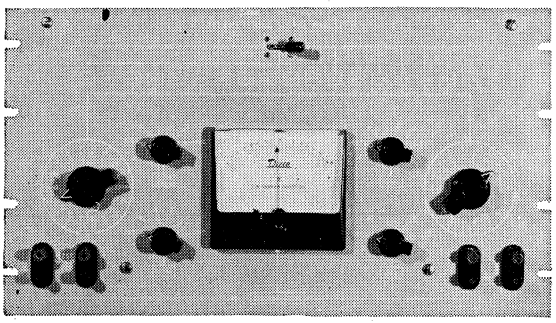
D.C. TO D.C. CONVERTERS

D.C. to D.C. converters or D.C. to A.C. converters are immediately available in a wide range of voltages and power ratings. 6 volt, 12 volt, 24 volt, or 28 volt inputs with 100 volts plus or minus, 150 volts, 200 volts, 250 volts, 300 volts, and 350 volts D.C. outputs with or without filament windings. VA ratings up to 1 KVA can be furnished. 115 volt 400 c.p.s. single phase or 208 volt 3 phase power supplies with .1% frequency control are available. We have so many designs in file on these we can't possibly describe them all.



TRANSFORMERS

Toroidal construction offers distinct advantages for many transformer applications. Precision ratio transformers are more accurate and economical on a toroidal core. Impedance matching transformers with exceptional characteristics as well as power transformers are often better and more economical. We have in our design files practically every conceivable combination. Order what you want and we'll supply it.



BAND SWITCH DISCRIMINATOR

The Deeco Instruments telemetering signal analyzer was designed for test and checkout of a complete telemetering system from transducer to R.F. transmitter. The analyzer contains a complete set (Bands 1 thru 18) of band pass filters and discriminators with switching facilities for determining subcarrier deviation, R.F. Carrier deviation, and system calibrations.

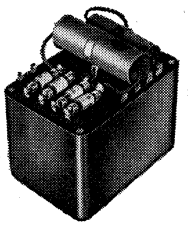
POWER TRANSFORMERS — 60 CPS



Particularly for measuring instruments and other critical applica tions where space is at a premium, or operating temperatures are high. Each unit generally contains one power transfo rmer and two filter chokes vacuum potted in a molded case with high-temperature resin. The power transformer normally has two 6.3 V., 2 Amp. heater windings, and a high voltage C.T. winding intended for bridge rectifier systems composed of sili con diodes. Two output voltages, full- and half-, can thus be obtained. Full output voltage up to 600 v.d.c. are available at the listed price. Volt ages up to 2,000 available upon request. *Specify in terms of full output voltage,* for an input filter condenser of 20 μf. A total of 75 watts is available from the power transformer and it is usually divided on the basis of 25 watts for heaters and 50 watts for plates, etc. Filter chokes have from 5 to 50 henrys depending upon the current and voltage chosen. Ter minals are arranged for direct soldering of rectifiers and filter condenser connections so that time, effort and cost in providing hard ware is avoided. Units are provided for chassis mounting or for use on the laboratory bench. Chassis units req uire two rectangular openings for terminals and four mounting holes. The two rectangular openings permit a sheet of metal under the rectifiers to pro vide a heat sink. Bench units are provided with two studs for mounting cartridge-type filter condensers.

TRANSISTORIZED POWER SUPPLY TRANSFORMERS

For both common emitter and common collector circuits. Toroidal windings on ring cores. Wattages ranging from 5 to 150. Primary volts, 6 to 50 v.d.c.; Secondary voltages up to 600 v.d.c. Primary and feedback windings are bifilarly wound for best coupling conditions. Secondary well insulated, center-tapped and uniformly wound around the core. With proper circuitry, efficiencies of 75 to 80% may be obtained.

LOW AND MEDIUM FREQUENCY TOROIDAL TRANSFORMERS

For experimental use and small production runs. Audio frequencies to 500 Kc. Mo-permalloy powder ring cores. Each transformer has three center-tapped windings. Can be hooked up to fit most any circuit position; Input, Output, Interstage, Oscillator, Filter Reactor, Etc.; single-ended or push-pull; step up or stepdown; tubes or transistors. Operates tuned or untuned. Having one or more sets available saves precious development time. If you use these transformers in your development work, we will furnish a production model, cut-down or built-up to fit your exact requirements, at cost. No additional design charges.

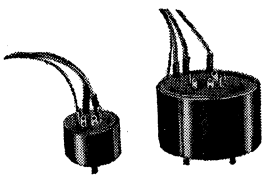
HIGH VOLTAGE TRANSFORMERS FOR RADIATION COUNTERS



These transformers are designed to produce the voltages needed to operate scintillation counter-photo-multiplier combinations, Geiger counters, BF_3 counters, Etc. They are constructed and processed to withstand continuous operation at temperatures up to 180°C (356°F). The output voltages are sufficiently high to permit the use of good regulating circuits. Voltage regulation of 1%, or better, may thus be readily obtained. Heater voltages for rectifier tubes, such as 1B3-GT, 1V2, Etc., are supplied in all four types, and the heater windings are insulated to withstand the full output voltage with plenty of reserve. The two larger transformers also provide a heater voltage for a series regulator tube such as a 2C53 or 6842. The suggested circuitry, which is very simple, will be furnished upon receipt of an order for one or more transformers.

NYT *small encapsulated* R. F. chokes...

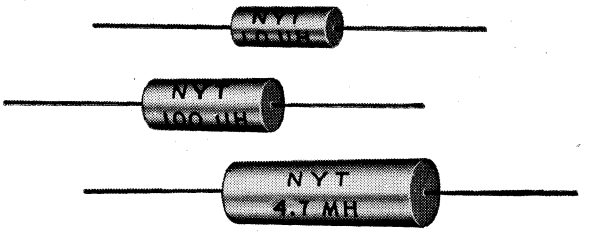
100,000 to 1 inductance range. Here is the widest range available – 0.1 μH to 10 MH!

Miniature to subminiature sizes. For example, a unit with an inductance of 100 μH measures only .0122 cubic inches.

125°C – the operating temperature range of these units is −55°C to +125°C.

Excellent environment features – NYT chokes are epoxy encapsulated for resistance to moisture and immersion. All units are designed to meet MIL-C-15305A, Grade 1, Class B.

Do your application engineering with a minimum of experimental work. New technical and performance data including description of electrical parameters in Bulletin 125.



These R.F. Chokes are designed to meet MIL-C-15305A, Grade 1 (Resistant to immersion and moisture resistance tests), Class B (−55° to +125° C). Marking: Black printing on yellow body.

Self-resonant frequency (Distributed Capacity) measured with full length leads on Grid-Dipmeter (20%).

Q and Rp values as measured on Q-Meter. Minimum Rp values listed at the self-resonant frequency are very conservative. Actual values average 50% higher.

Imax ratings are conservative even at 125°C operation. They are based on ⅓ watt dissipation for Series S and M chokes, and on ½ watt dissipation for Series L chokes.

Application Notes

VACUUM TUBE BLOCKING OSCILLATORS:

The following table of winding inductances and corresponding pulse widths generally holds. Feedback-turns ratio should be about 1 : 1

Inductance (mh)	Pulse width (μ sec)
22	2 to 8
10	0.5 to 2
4.7	0.3 to 1.0
1	0.2 to 0.5
0.47	0.15 to 0.4
0.1	0.1 to 0.25

TRANSISTOR BLOCKING OSCILLATORS:

The pulse width for a given inductance is approximately 2 to 8 times that shown in chart. For collector-to-base or collector-to-emitter, feedback-turns ratios of 3 : 1 or 4 : 1 have been found to be most generally used.

INTERSTAGE COUPLING

In vacuum tube circuits, the pulse width (for 5-10% droop) requires roughly twice the inductance shown in the chart. For transistor interstage coupling, use inductance shown in chart for given pulse width.

ORDERING INFORMATION, NON-STOCK ITEMS:

All transformers are available in 3 grades: Commercial, Military and X grade. These can be ordered in any standard series and case. Normal delivery of such samples is 2 weeks. Prices for custom-wound transformers start at approximately $7.00 for 1 to 4 quantity, and as low as $1.50 in production quantities.

Commercial Grade transformers operate at temperatures from −25°C. to +105°C., withstanding indefinite exposure to relative humidity of 95%.

MIL Grade transformers are encapsulated for temperatures from −55°C. to +105°C. and will surpass most requirements of MIL-T-27A Grade 5, Class R.

X Grade transformers meet all MIL grade requirements and will operate up to +150°C.

High Reliability

2352

The G.E.C. range of hydrogen thyratrons utilizes new techniques to provide the most reliable operation and greatest possible life. A patented replenisher system (titanium hydride surrounded by the heater) is controlled by a barretter and thermistor, which maintain constant gas pressure regardless of wide variations in supply voltage and ambient temperature. Therefore, since the replenisher voltage is not critical, the supply may be permitted to vary ±7½% and the ambient temperature may vary between −25°C and +75°C. Over these wider allowable limits, Genalex Thyratrons are more stable than older tubes operating in a more restricted range. The newest type in the G.E.C. Hydrogen Thyratron Series is the GHT-4, with the following characteristics:

Maximum Anode Voltage: 25,000 volts, peak.
Maximum Anode Current: 2,000 amps, peak.
Average Anode Current: 3 amps, max.
Pulse power × p.r.f.: 10,000 Megawatt–cps, max.
Jitter: 0.001 microseconds, max.

Known throughout the world for the KT66 and KT88 audio tubes, widely used in quality high fidelity applications, GENALEX also has available many new tube types useful in all fields of electronics.

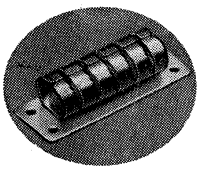
Specify Birtcher tube cooling and retention devices

85% of all electronic equipment failures are caused by tube failures, the main causes being heat and vibration. The Birtcher Corporation is currently solving tough reliability problems for both government and private industry through the use of its tube and component cooling and retention devices—specially adapted where necessary to fit customers' special needs.

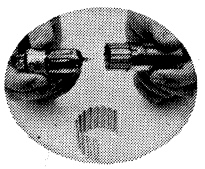


KOOL KLAMPS

Birtcher KOOL KLAMPS perform two important functions, they reduce miniature and sub-miniature tube temperatures by as much as 40° C. while retaining against shock and vibration.
refer to catalog 5-KK

TUBE CLAMPS

Available in more than 6,000 modifications, Birtcher TUBE CLAMPS hold tubes and components securely in place, under severe shock and vibration.
refer to catalog 4-D



JAN SHIELD INSERTS

The Navy Electronics Research Laboratory developed these Birtcher-manufactured corrugated JAN shield inserts to combat the high rate of tube failures due to excessive heat.

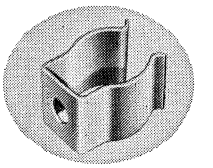
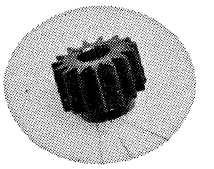
TOP HOLDING CLAMPS

In three types: TOP TAINERS, TYPE 2 CLAMPS and CRYSTAL CLIPS. To retain all standard and miniature tubes and plug-in components plus crystals and other wafer-shaped components.
refer to catalog 2-TT



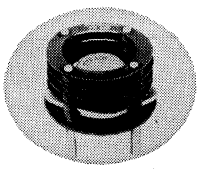
TRANSISTOR CLIPS

TRANSISTOR CLIPS are made in a range of sizes and shapes to retain nearly all currently used transistors and carry off much of the heat to insure greater life and performance.
refer to catalog 2-TC



TRANSISTOR RADIATORS

To fit all JEDEC 30 package transistors. Provides large radiating surface to get rid of excessive and damaging heat. Permits maximum input within recommended heat limits.
refer to catalog 2-TC



DIODE RADIATORS

Prevent "thermal runaway" in power diodes by maintaining collector junction temperature at or below manufacturers recommended levels. Permits use above ground potential.

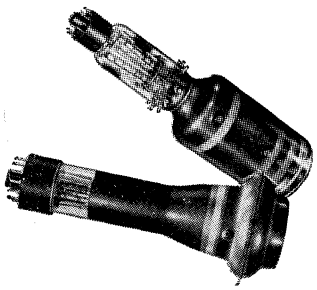
INDUSTRIAL & MILITARY
Cathode Ray Tubes



Single-beam and Multi-beam cathode ray tubes with round, rectangular, or square faces from 3 to 12 inches. One, two, three, four, five, eight, and ten gun types. Those shown below are but a few of the many standard types regularly produced by ETC. All phosphors are available.

Also many special C-R tubes including Dual X-axis input, Spiral band, Radial deflection, and Primary beam commutator types. Types to critical military and industrial specifications... by the pioneers in multi-gun cathode ray tubes.

ETC single- and multi-channel oscilloscopes are described on page 000.

IERC heat-dissipating electron tube shields

meet new design applications in missile, guidance control and other military electronic equipment.

IERC 300 SERIES

T3-300 Series subminiature tube clamp shields are designed for use in minimum space and to bond directly to heat sink or chassis. They excel in vibration and shock environments. The T3-300 Series are the only clamps having no resonance condition in vibration with their resulting increase in accelerations applied to the tube.

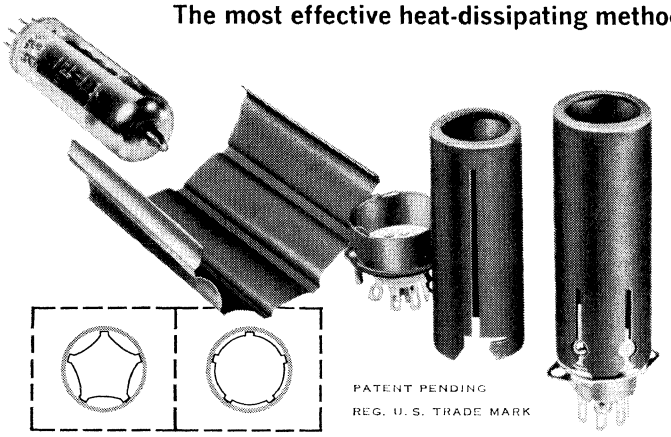
HEAT-DISSIPATING TUBE SHIELDS

The most effective heat-dissipating method for cooling miniature electron tubes!



IERC THERMA-flex Heat-dissipating Tube Shields are available in most sizes and types of IERC Miniature Heat-dissipating Tube Shields. They have the new, HI-EFFICIENCY heat-dissipating THERMA-flex liner. This liner has had more than a year and one-half of research, testing and development by IERC. Government* test sources have checked THERMA-flex shield performance. Latest testing techniques were employed. These prove the IERC THERMA-flex liner to be the most efficient type available for vertically-mounted tube shields. The broad areas of the liner attain a **particular** semi-eliptical precision spring curve when placed in the shield. Tube insertion flexes this curve in adjustment with bulb contours. Maximum metal to glass contact area is provided. Heat is distributed from hot spot to shield and heat sink which is then dissipated by conduction, radiation and convection. IERC Miniature Heat-dissipating Tube Shields with THERMA-flex liners will meet all requirements of MIL-S-9372 (USAF) and MIL-S-19876 (NAVY). For shield sizes see TR and NW listings

*See NEL Reliability Design Handbook, Sec. 502—"Improved Type Min. Tube Shields," R. B. Jordan, Jan. 15, 1959, OTS, PB121839.

GENERAL INFORMATION

IERC Octal/Power heat-dissipating tube shields

The IERC Octal tube shields have been qualified to applicable portions of Miniature Heat-dissipation Tube Shield Specification MIL-S-9372B such as heat dissipation requirements, the 5 to 2000 cps vibration tests, and, in addition a 90 G shock test. All shields are furnished with the new "Henderlube" finish, a dry lubricant for easy installation and removal of shield. "Henderlube" provides electrostatic shielding. Mounting hole dimension in bases match standard military bottom-mounted sockets.

The IERC heat-dissipating, electrostatic shielding vibration and shock-protecting tube shield permits tube types of the 6252 and 6907 (or other tubes of similar outline dimensions) to be used in environments previously considered impossible. Note shield illustrated is designed for use with Johnson Socket 122-105.

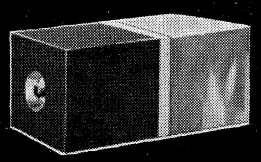
THE ONLY ULTRASONIC CLEANERS WITH A CHOICE OF TRANSDUCER POWER!

ACOUSTICA ULTRASONIC GENERAL PURPOSE CLEANERS

ACOUSTICA ULTRASONIC HEAVY DUTY CLEANERS

The transducer is the heart of the ultrasonic cleaner!



An ultrasonic cleaner is no better than its transducer. Acoustica transducers have proved their superiority. The new low-frequency Multipower transducer used in the Acoustica heavy duty industrial line produces the most effective cleaning field known today. It represents a major break-through in ultrasonic technology.

All prices include tank and matching generator

Choose the correct cleaner for your purpose!

In determining which ultrasonic cleaning unit to buy, remember that all ultrasonic cleaning systems are not alike. The principle is the same, but the results are not. *The power and frequency of the transducer* are the key factors in determining the success or failure of applying ultrasonic energy for solving industry's cleaning problems. Acoustica research has developed *two* types of transducers for its ultrasonic cleaning units—the *General Purpose* 40kc barium titanate transducer and the *Multipower* heavy duty 20kc transducer. Expert Acoustica engineers are ready to advise you which type will better suit your needs.

THE CIRCOSONIC POWER CONCEPT

The magic word "ultrasonics" alone is not enough. To accomplish the results for American industry, sufficient driving **Power** must be applied to a **Precisely Designed Transducer** at the correct **Frequency** — consistently. This concept of **Power** ultrasonics is embodied in **Circosonic.** Only **Circo** meets these requirements, combined with trouble free continuous operation and economical purchase cost.

Solid stainless steel is used in cleaner tank manufacture making them suitable for all type liquids. Controls are conveniently placed and identified for ease of operation by unskilled personnel.

From the first ultrasonic cleaning machine publicly operated at the National Metal Congress at Philadelphia in 1952, to the new **BC** Series, **Circo** has consistently demonstrated its leadership in the design and application of ultrasonic energy.

Commercial units in operation range from small laboratory models to huge conveyorized automatic units, handling up to 20,000 lbs. metal parts per hour. **Circo** engineers will be pleased to offer technical assistance and recommend specific units to fit your needs.

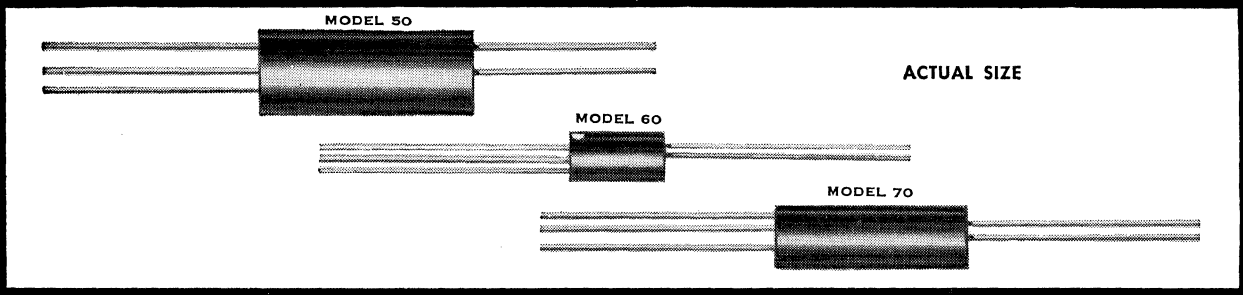
SOLID STATE ELECTRONIC CHOPPERS



microminiature	lightweight	low power	high speed	rugged	indefinitely long life
non-mechanical	inertialess	low level	high efficiency	linear	temperature stable

The transistor chopper (or modulator) is a solidly encapsulated unit designed to alternately connect and disconnect a load from a signal source. It may also be used as a demodulator to convert an a.c. signal to d.c. It is capable of linearly switching or chopping voltages over a wide dynamic range which extends down to a fraction of a millivolt and up to 10 volts or more. Unlike mechanical choppers which can only be designed to operate over a narrow and comparatively low frequency range due to mechanical limitations, this transistorized chopper is an inertialess device that can be driven from d.c. to hundreds of kilocycles.

The switching circuitry used operates the transistors in a manner which provides stability and freedom from drift over a wide temperature range. Only carefully selected and matched transistors are utilized.

The noise figure of the transistor chopper is competitive with mechanical choppers for many uses. Furthermore, the noise level will not increase with usage.

These units are practically immune to the effects of shock and vibration making them ideal for military, space vehicle and portable applications; or where power conservation, miniaturization and elimination of maintenance are a necessity. The transistor chopper has an inherently long life and is not subject to contact bounce, wear, pitting or burning.

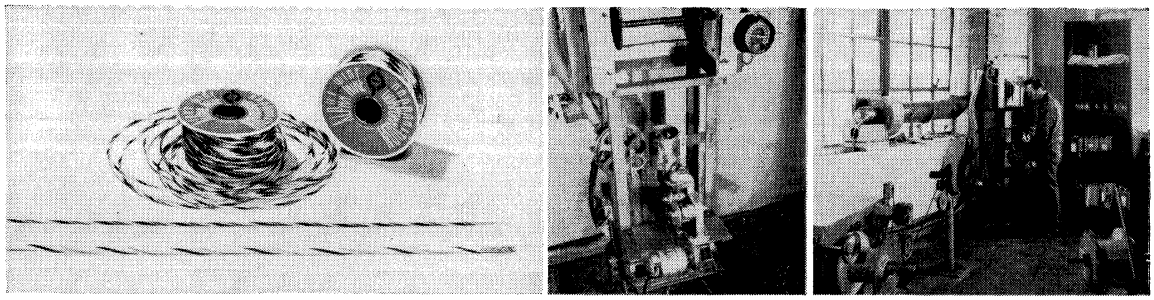
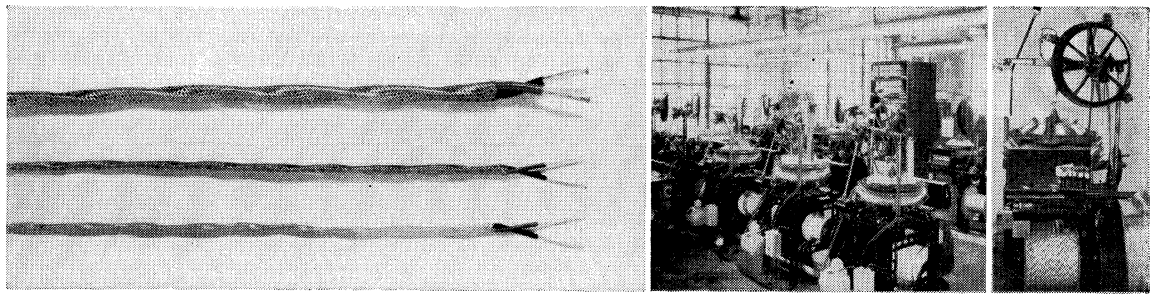
ALPHA electronics WIRE

EVERYTHING IN WIRE PROCESSING BY ALPHA



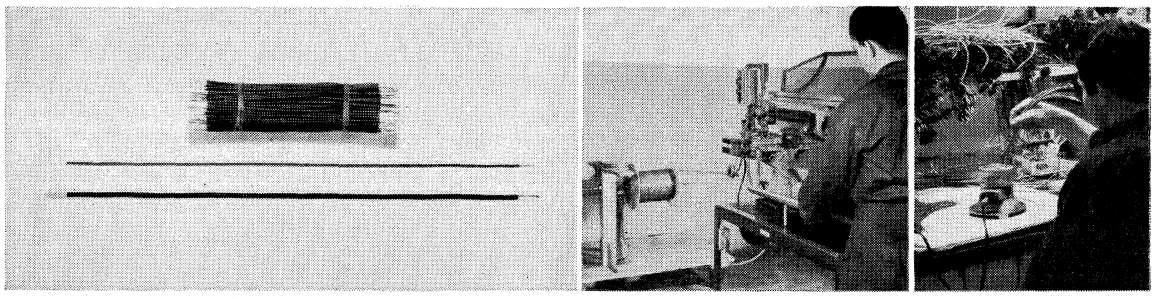
STRIPING

■ Spiral striping of colors permit the engineering of an almost unrestricted number of combinations. The use of specially compounded inks applied to vinyl and nylon insulation are dried in our engineered heating tower. This insures the fusing of the color coding to the insulation resulting in an indelible stripe. As many as three different color combinations of spiral stripes can be applied at one time, resulting in over 40,000 possible color combinations.



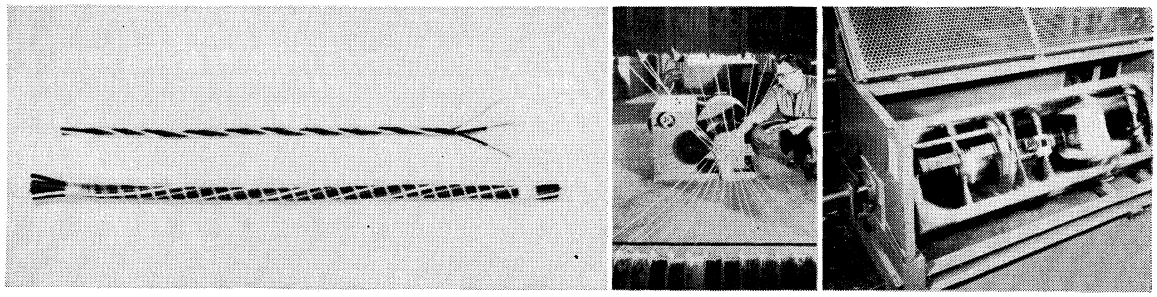
BRAIDING & SHIELDING

■ Braided and spiral bare, tinned or silver plated copper shields can be fabricated over the single conductor hook-up wire and multi-color conductor cables listed in this catalog.
■ Alpha's Textile braided coverings offer a wide variety of color combinations for easy identification, strength, durability and appearance. Materials like cotton, rayon, dacron, celanese, and glass may be used.



CUTTING, STRIPPING & TINNING

■ Automatic cutting, stripping and hot tin dipping of wire to any desired length is available. Precision equipment measures the amount of insulation to be stripped and the exact length of the wire to extremely precise tolerances.
■ Our facilities for marking and numbering can be ordered in conjunction with specifications for wire to be cut and stripped. As a result, you can specify the exact length of wire cut and stripped with a series of numbers or letters at the ends of the wire for identification.



CABLING

■ Over 2,000 single-conductor items listed in this catalog can be engineered into multi-conductor cables. Alpha's cabling facilities will produce cables ranging from 2 conductors to 200 conductors, depending upon the outside diameter of each individual conductor. Specific color sequences and the precise number of twists per foot can be manufactured to exact engineering specifications.

See YELLOW SECTION for local offices, telephones, etc.

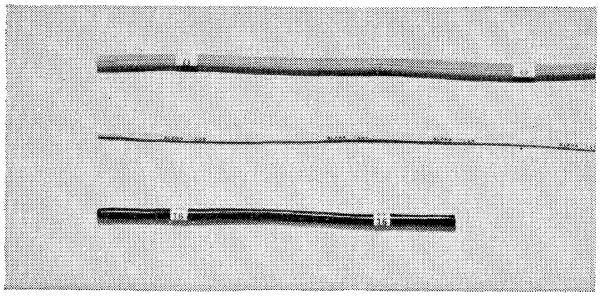
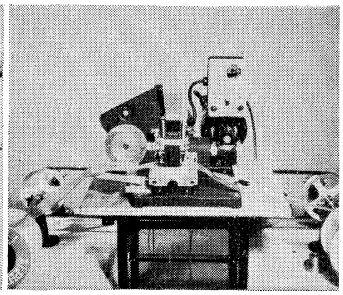
ALPHA electronics WIRE

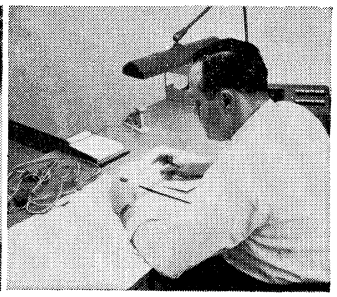
EVERYTHING IN WIRE PROCESSING BY ALPHA





■For positive identification, a series of letters and numbers—or a combination of both—can be made a permanent part of the insulation and jacket of our various wire and cable and tubing. This marking and numbering can be applied to plastic, nylon, Teflon and braided coverings. This coding can also be achieved by the use of identification markers. Your trade name can be shown on the wire and cable you purchase from Alpha. Our facilities for marking and numbering can be ordered in conjunction with specifications for wire to be cut and stripped.

MARKING & NUMBERING



■Our engineering staff is at your disposal to aid in the development of wire and cable and tubing specifically for your products of experimental prototypes.
Alpha's creative engineers have comprehensive know-how in the fields of insulation, chemistry and physics as well as manufacturing processes.
Designing wire and cable to do the right job at the right price is an Alpha tradition for over 35 years.

- Economical — cut and slide over your conductor — use only where needed.
- Permits use of your favorite hook-up wire —keep your present wire sizes, dialectrics, color coding,
- Available in economical tinned steel for audio and radio circuits, or in tinned bronze for non-magnetic effects and corrosion resistance.
- Tinned shielding material solders instantly at any point.
- Flat wire construction (.020" wall) is more rigid . . . easier to handle . . . makes smoother bends with fewer kinks.
- Smooth inner surface allows for quicker and easier insertion of one or more conductor wires. No time wasted in clearing an opening. No fine wires to become entangled.
- Smooth outer surface enhances appearance and facilitates feeding the casing thru crowded spaces.
- Available with vinylite cover for high voltage insulation—makes good coaxial cable with ethylene covered wires.
- Superior to braided shield—has lower distributed capacity (typically 25 mmfd/foot)—higher "Q", (typically 218)-

SPECIFY **SYNKOTE** FOR SURE PERFORMANCE

TEFLON* MINIATURE COAXIAL CABLE

DESCRIPTION: Plastoid "Teflon" miniature coaxial cables are about ¼ the outside diameter of comparable RG types, yet provide the same impedance characteristics as standard types. In three widely used impedance ranges (50, 70 and 93 ohms) these "Teflon" miniature cables exhibit stable characteristics when operated up to 200°C and can be used successfully in confined areas and where high ambient temperatures are present. These miniature coaxial cables may be applied with any desired outer coating, and will withstand temperatures up to 250°C, when supplied with an impregnated fiber glass jacket.

CONSTRUCTION: Both conductor and braid usually employ silver plated wire. Standard jacket material is "Teflon". Any desired jacketing such as Nylon, Fiberglass, Teflon Coated Fiberglass, KEL-F or other suitable jackets are available to meet unique conditions and specifications.

APPLICATIONS: Plastoid "Teflon" miniature coaxial cables are the ultimate in space conservation as compared to standard RG types. Because of their rugged construction, they are an important contribution to such varied applications as aircraft and guided missiles, plants or laboratories where instrument hook-ups are subjected to chemical corrosion or abrasive treatment.

DESIGN FEATURES: Plastoid "Teflon" miniature coaxial cables have many advantages, a few of which are: Miniature size with some impedance as comparable RG types; ability to withstand high temperature and corrosive or abrasive conditions; high voltage characteristics and excellent flexibility at temperatures as low as −65°C. The uniform OD of these light weight cables makes it possible to use the same size connector for each of the three impedance ranges.

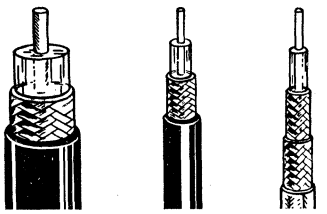
Special vinyl compounds assure high insulation resistance, best electrical and physical properties. Precision short lay cabling maintains conductor balance, provides quiet circuit, free from cross talk. Free stripping vinyl outer jacket is waterproof and weather resistant. Quick termination, positive color coding and small diameter insure maximum economy in all installations. For balanced intercommunication systems, annunciators, telephones, control circuit cable, electronic computer cable, multiple speaker cable and signal systems.

COAXIAL CABLES



RG 8A/U RG 59A/U RG-14A/U

Polyethylene is used for conductor insulation and assures maximum operating efficiency. Shielding braid is single or double copper, single tinned copper or double silver, depending on type of cable. Dielectric material is polyethylene. These cables are especially adaptable to applications requiring high, very high and ultra-high frequencies. Typical examples of RG/U Cables are shown. Because of the constantly changing requirements for this type of cable, it is suggested that the factory be contacted for any cables not listed.

New...Tape Cable*

THIN **LIGHT** **FLEXIBLE** **TOUGH**

A MAJOR ADVANCE IN INTER-WIRING

TAPE CABLE is a flat, multi-conductor, coplanar electrical cable for this Space Age. Flat hair-thin copper conductors are prepositioned and imbedded in transparent polyester. Lightness, strength, flexibility and electrical characteristics are outstanding.

Present uses are main wiring in computers, telephone equipment, airborne devices, missiles, gate cables, book packaging of printed boards, sliding drawer cable, and scanning head cable.

Pre-positioned conductors in TAPE CABLE can save up to 90% of labor costs in wiring because:

1. All conductors are stripped simultaneously.
2. Positioning one conductor automatically positions all conductors.
3. All connections can be dip soldered in one operation.
4. Wiring errors are eliminated.

New *Selectacon technique permits automated harness assembly. Write for Engineering Bulletin #9.**

Commercial and military grade connectors are in stock at or available from AMP, Bendix-Scintilla, Elco and Industrial Hardware. These permit terminations to printed wiring, conventional round wire and cable, wire wrap, taper pins and taper tabs, and crimp or solder terminals.

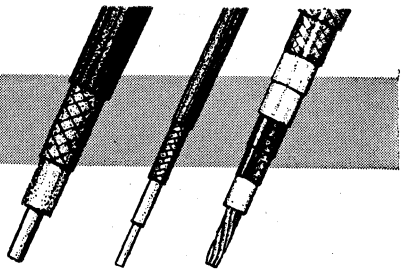
TIMES

COAXIAL CABLES



Times Wire & Cable Co., Inc. manufactures the full range of Coaxial Cables under the most rigid tolerances, to meet or surpass MIL C-17B specifications. (See listing).

MINIATURIZED. Miniaturized cables, with either polyethylene or Teflon dielectric, are available in a wide range that encompasses most all applications.

TEFLON. Teflon dielectric is used in those cables designed to operate efficiently in the 500° F range. These cables exhibit greater power handling capabilities than cables of equal size using polyethylene dielectric.

Special constructions which depart in design from standard are available upon request.

Tensolite RELIABLE HIGH TEMPERATURE WIRE & CABLE

Tensolite facilities are devoted exclusively to the engineering and manufacturing of miniature plastic insulated wire and cable—featuring Teflon insulation for high temperature (—90 deg. C. to +250 deg. C.) applications. 100 percent inspections before, during and after manufacture, part of the most rigid quality control program in the industry, assures reliability of the finished product.

"TEFLON" INSULATED CABLE

From large sizes using 6 AWG wire down to subminiature cables with 36 AWG single conductors, Tensolite makes multi-conductor cables to your specifications. Tensolite cables utilize the maximum number of conductors in a minimum of area—saving weight and space. They're available as ribbon cable or in standard round configurations. For demanding applications, we recommend individual conductors of our FLEXOLON wire.

HOOK-UP WIRE

TYPE E-EE TO MIL-W-16878

FLEXOLON WIRE

A new concept in high temperature insulation developed by Tensolite's research and development laboratories. **FLEXOLON** wire provides the best properties of wrapped and extruded fluorocarbon insulation. Important features of this versatile hook-up and lead wire are:

- Solid colors and striped combinations.
- Most flexible of all hook-up wire construction.
- High temperature range of —90 deg. C. to +250 deg. C.
- Greatest miniaturization in MIL-SPEC hook-up wire (smallest hook-up wire in the world).
- High dielectric strength (far exceeds required 600 V and 1000 V ratings).
- Consistent concentricity.
- Superior cut-through resistance.

TENSOLON WIRE

Insulated with TFE fluorocarbon high temperature resin.

Choose from:

Spiral wrapped...with special cross-lapped construction and unlimited color coding; striping that meets commercial and military specifications.

Extruded...featuring an extruded homogeneous Teflon TFE resin (solid and inked stripe combinations).

TENSOLEX WIRE

Insulated with extruded vinyl plastic.

Types B and C meet **MIL-W-16878.** They are high temperature hook-up wires rated for continuous use from —55 deg. C. to +105 deg. C. with or without nylon jackets.

TENSOLEX WIRE

Types WL and SRIR are manufactured in accordance with the joint Army-Navy specification **JAN-C-76** (Qualification approval Certificates Nos. 13725 and 13606A).

Types LW and MW are general purpose hook-up wires specifically designed for radio, instrument, and military electronic applications. Designed to meet **MIL-W-76A,** they are recommended for use at temperatures up to 80 deg. C. in the internal wiring of electrical and electronic equipment.

TENSOLITE WRAPPED VINYL WIRE

Super-flexible wire designed for miniaturization applications at operating temperatures from —40 deg. C. to +60 deg. C.

AIRFRAME WIRE

TENSOLON AIRFRAME WIRE

Insulated with high-temperature resin, it is manufactured in compliance with **MIL-W-7139A.** Important features are:

- —90 deg. C. to +250 deg. C. temp. range.
- 600 Volt and prescribed overload operation.
- Rugged, abrasion resistant construction.
- Short-time operation in event of fire.
- High resistance to chemicals.
- Excellent flexibility.

COAXIAL CABLE

TENSOLON MINIATURE COAXIAL CABLE

Designed to meet **MIL-C-17B,** it is ideal for high frequency operation from —90 deg. C. to +250 deg. C. Insulation assures extremely low loss, high dielectric strength, and complete resistance to moisture and chemicals. A great variety of outer jackets permits the selection of cable well suited for many application requirements.

MAGNET WIRE

TUFFLON MAGNET WIRE

High temperature Teflon insulated magnet wire — designed to meet **MIL-W-19583** — is ideal for coils and windings requiring high temperature application. It is supplied in wall thicknesses ST, HT, TT and QT and AWG sizes 18 through 44.
